

Figure S14. Changes in the relative abundance of taxa associated with consumption of three study products. The plot includes only taxa previously associated with lipid levels. The colours in the heat map reflect coefficients for each taxon calculated with Maaslin2. p-values < 0.05 were considered significant. The colours of the vertical annotation bar show relatedness among taxa. **—p-values < 0.05 and ***—p-values < 0.01; s—species; g—genus; f—family.
