

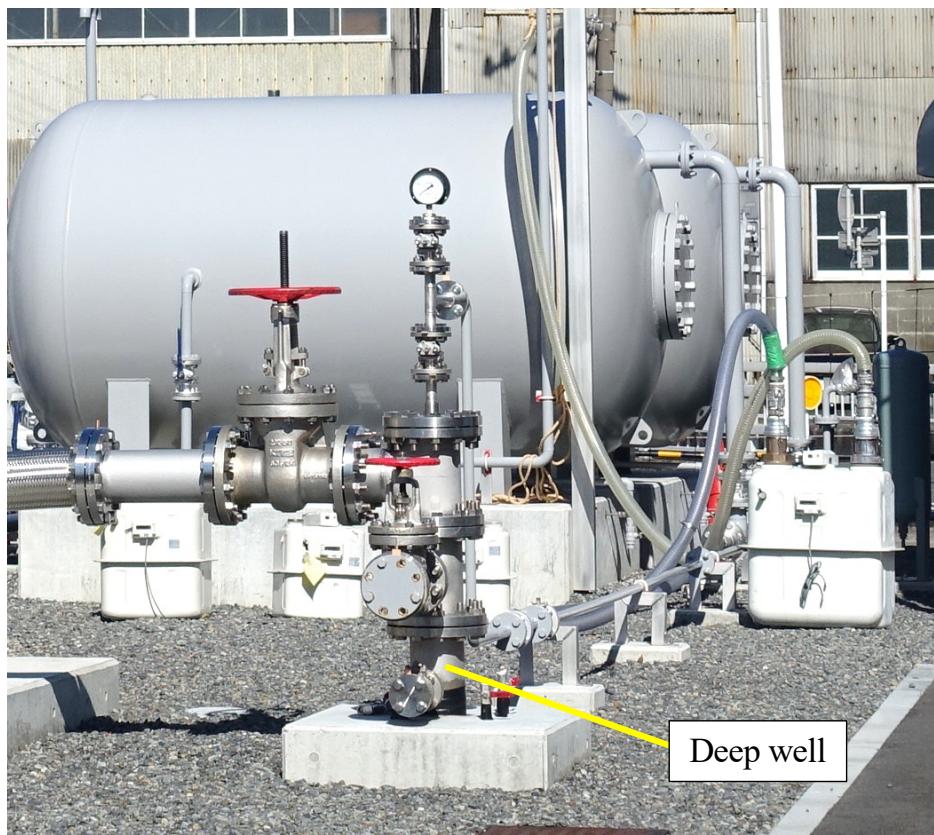

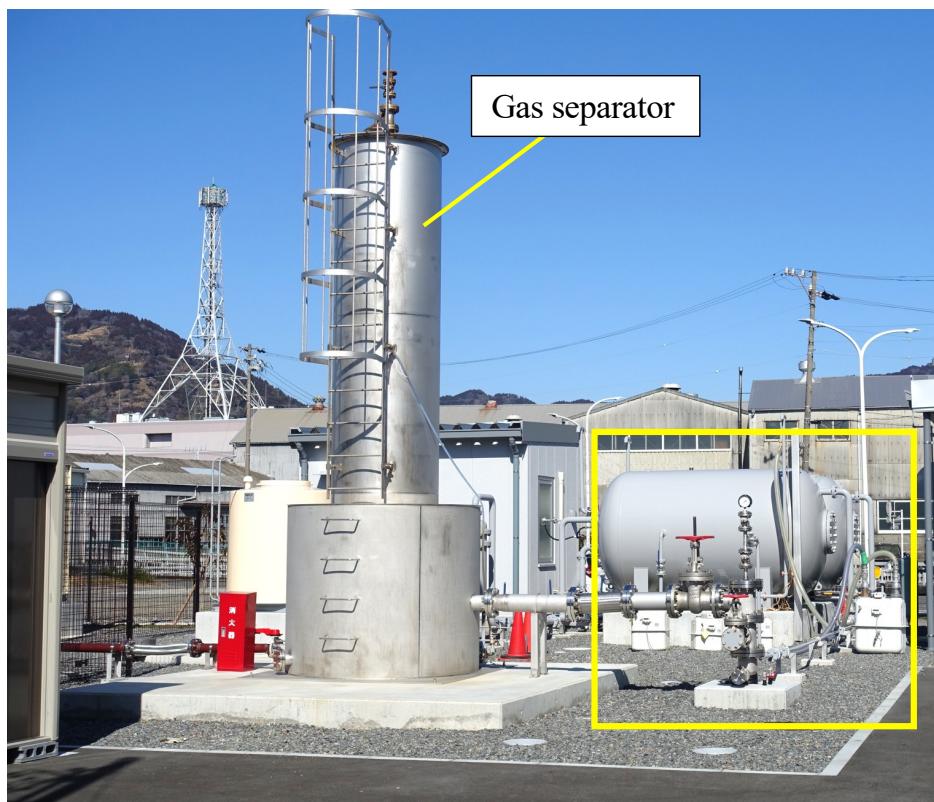

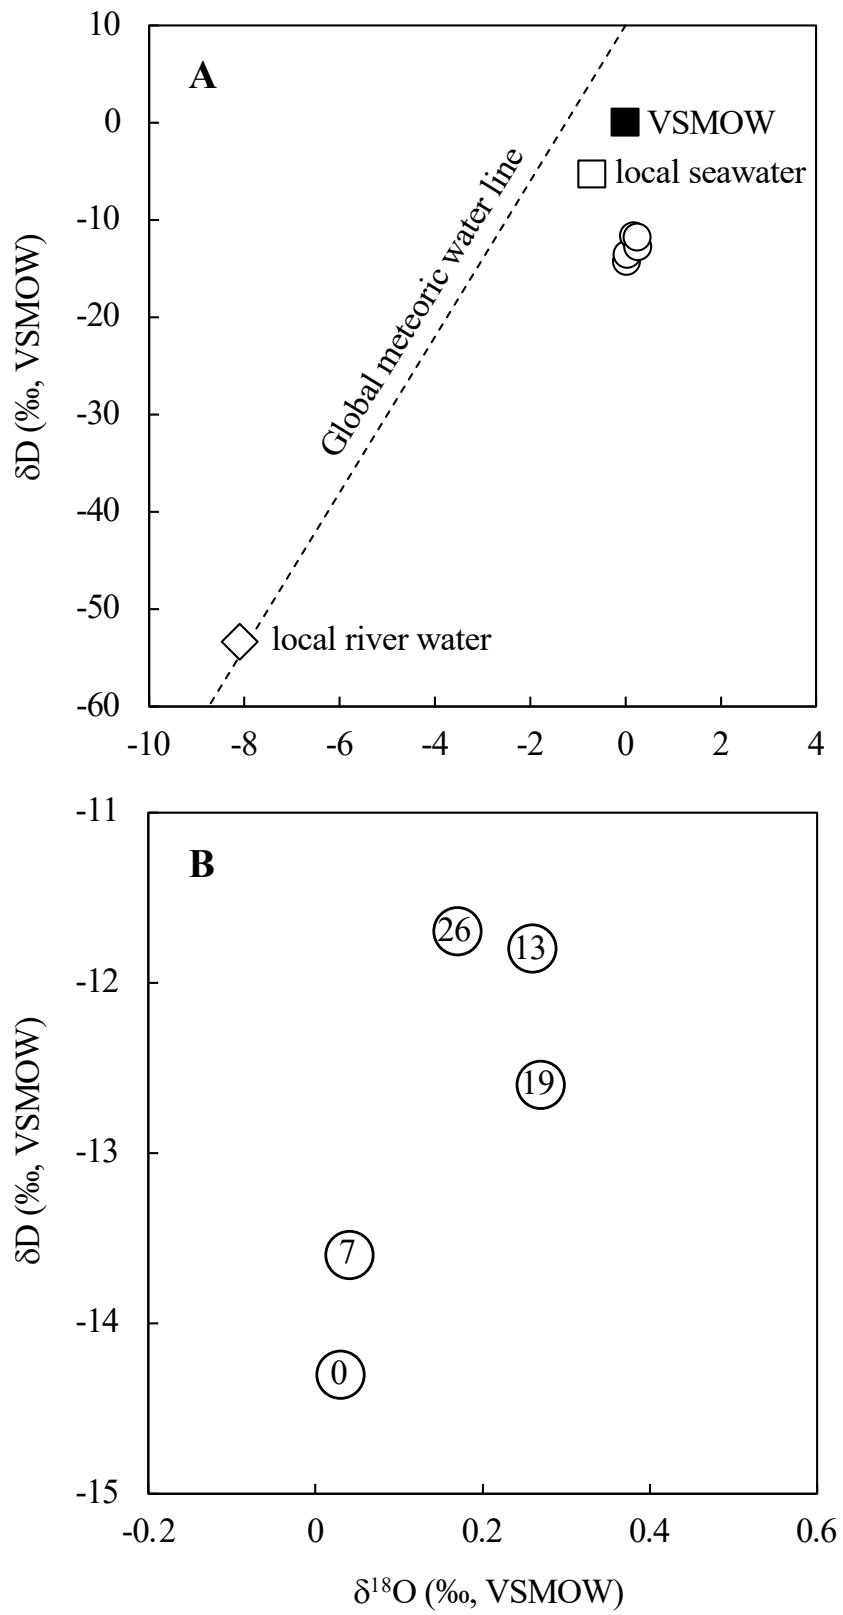

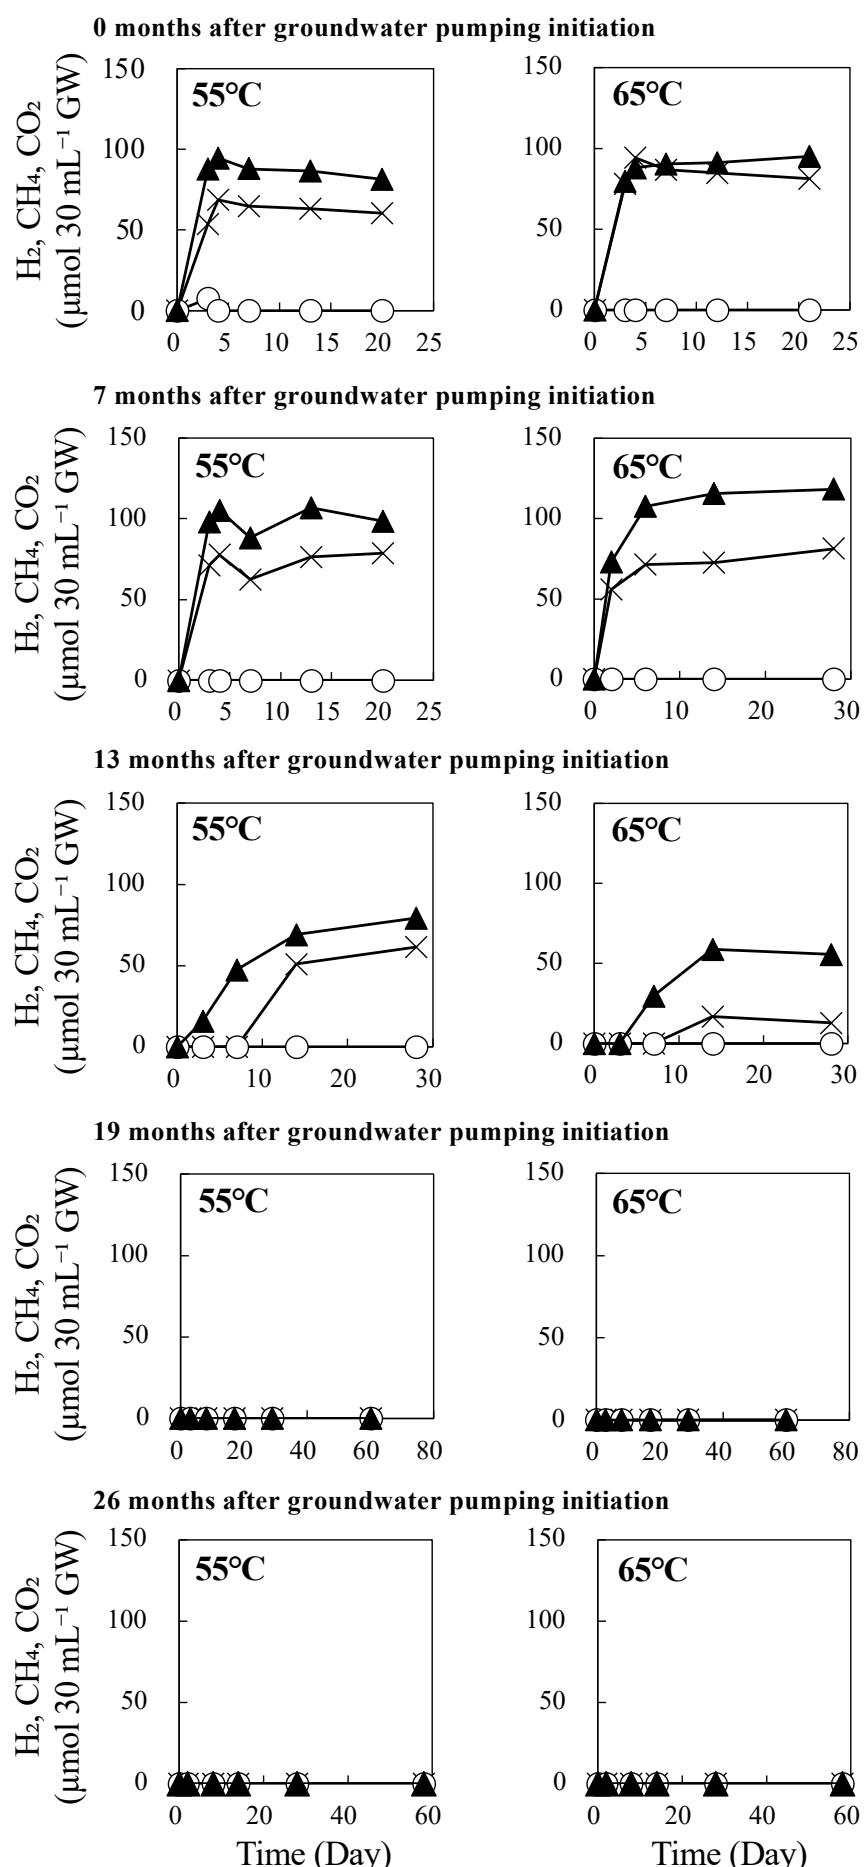

**Figure S1.** Geological map of Southwest Japan. The location of the accretionary prism known as the Shimanto Belt is according to Kano et al. [2]. MTL, Median Tectonic Line; ISTL, Itoigawa-Shizuoka Tectonic Line.

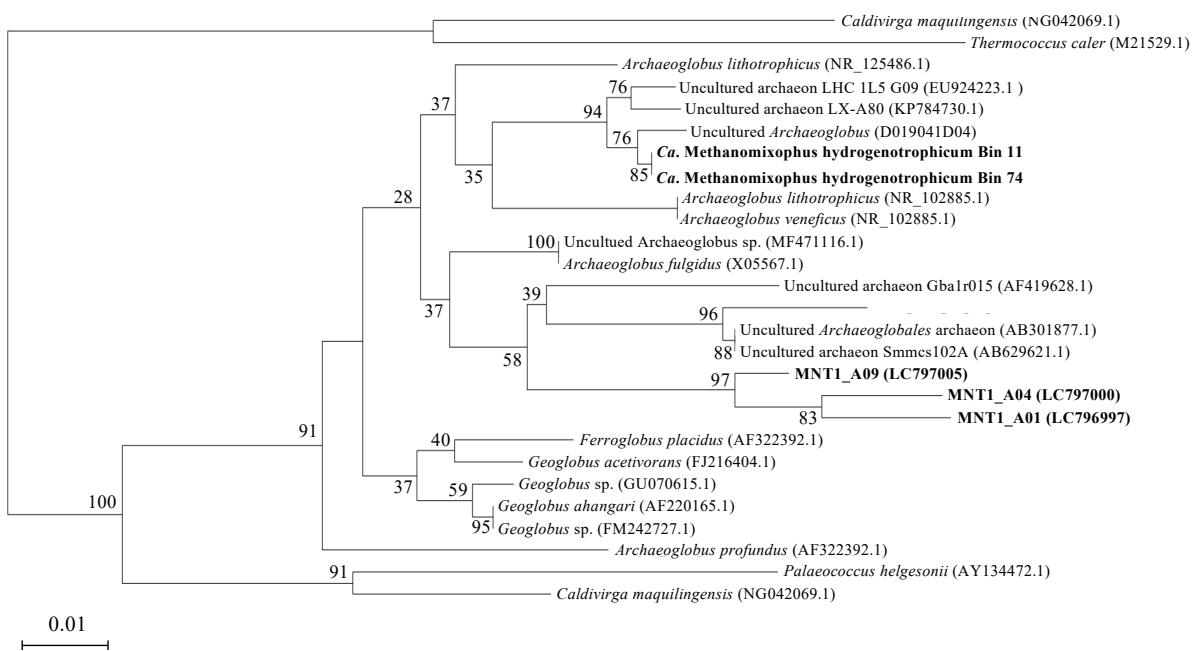

**Figure S2.** Photographs of the deep well “Yaizu Minato no.1 well” located in Shizuoka Prefecture, Japan. The area enclosed in a square indicates the deep well for sample collection.

**Figure S3.** (A) Stable hydrogen and oxygen isotopic compositions of the groundwater samples (open circles) along with those of Vienna Standard Mean Ocean Water (VSMOW) (black square), local seawater (open square), and local river water (open diamond). The broken line represents the global meteoric water line [30]. (B) This figure shows the differences in stable hydrogen and oxygen isotope ratios of each sample in detail. The numbers filled in the plots indicate elapsed time (month) since the start of groundwater pumping.

**Figure S4.** Biogas productions from the groundwater (GW) amened with YPG medium. Cumulative measurements in the gas phase of bottled cultures are shown as follows: H<sub>2</sub> (▲); CH<sub>4</sub> (○); CO<sub>2</sub> (×). Incubation temperature is mentioned in the figure.

**Figure S5.** Phylogenetic tree based on 16S rRNA gene sequences derived from the groundwater samples. Accession numbers are shown in parentheses. Bootstrap values determined from 1000 iterations are indicated at branching points.

**Table S1.** Primers for PCR used in this study.

Primer	Sequences	Target	References
109aF	5'-AMD GCT CAG TAA CAC GT-3'	Archaeal 16S rRNA gene	Großkopf et al. [61]
