One-way ANVOD was performed using Duncan's method, with different first letters in the same row and different second letters in the same column indicating significant differences ( $p < 0.05$ ).

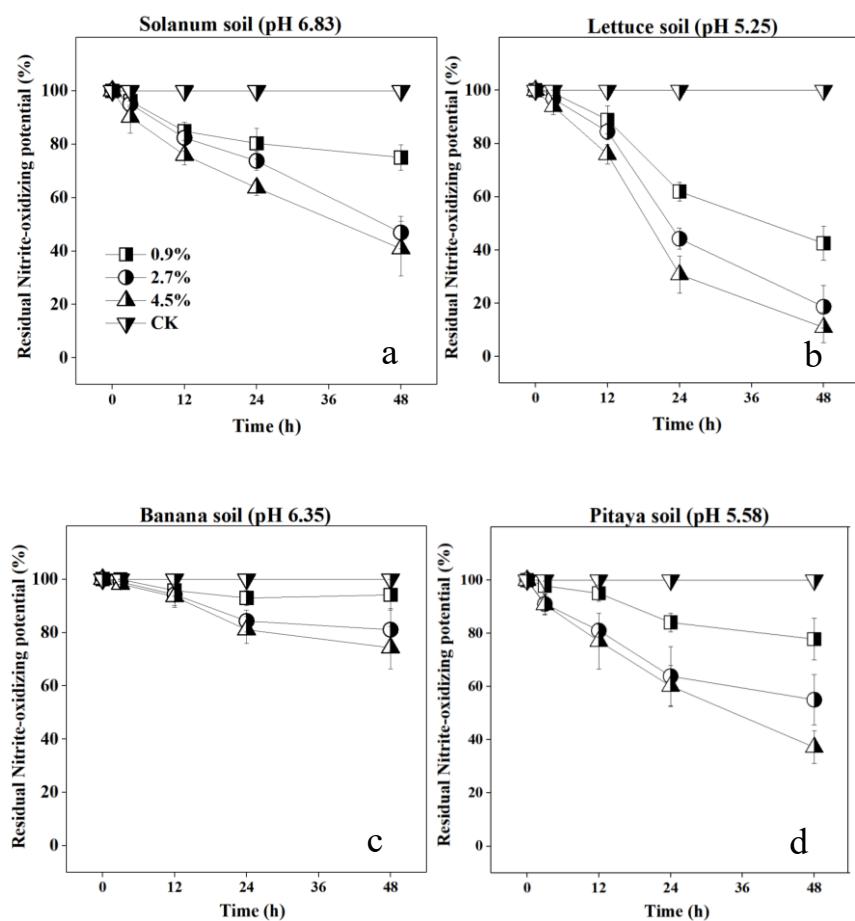

**Figure S1.** Correlation analysis between N<sub>2</sub>O emission rate and NO<sub>2</sub><sup>-</sup> concentration in microcosm experiment.

**Figure S2.** (a) Hydrolysis of urea; (b) changes of soil pH in microcosm. Hydrolysis reactions operated in soil microcosm with acetylene to inhibit AOM. The concentration of NBPT was 6.4  $\mu\text{g g}^{-1}$  soil<sub>dw</sub>.

**Figure S3.** Changes of N<sub>2</sub>O emission rate in second microcosm experiment with AOM inhibitor acetylene.

**Figure S4.** Time-series change of the residual nitrite-oxidizing potential in (a) solanum soil, (b) lettuce soil, (c) banana soils and (d) pitaya soil when responding to different concentration of FA. CK: without addition of FA.
