Figure S1 Hierarchical clustering analysis based on the composition of gut bacteria and phage communities among all groups. CA, carnivorous mammal. GPCD, captivity giant panda in Chengdu. GPQIN, wild giant panda in Qinling. GPQIO, wild giant panda in Qionglai. GPXXL, wild giant panda in Xiaoxiangling. GPYA, captivity giant panda in Ya'an. HE, herbivorous mammal. OC, omnivorous mammal. RP, wild red panda in Xiaoxiangling.

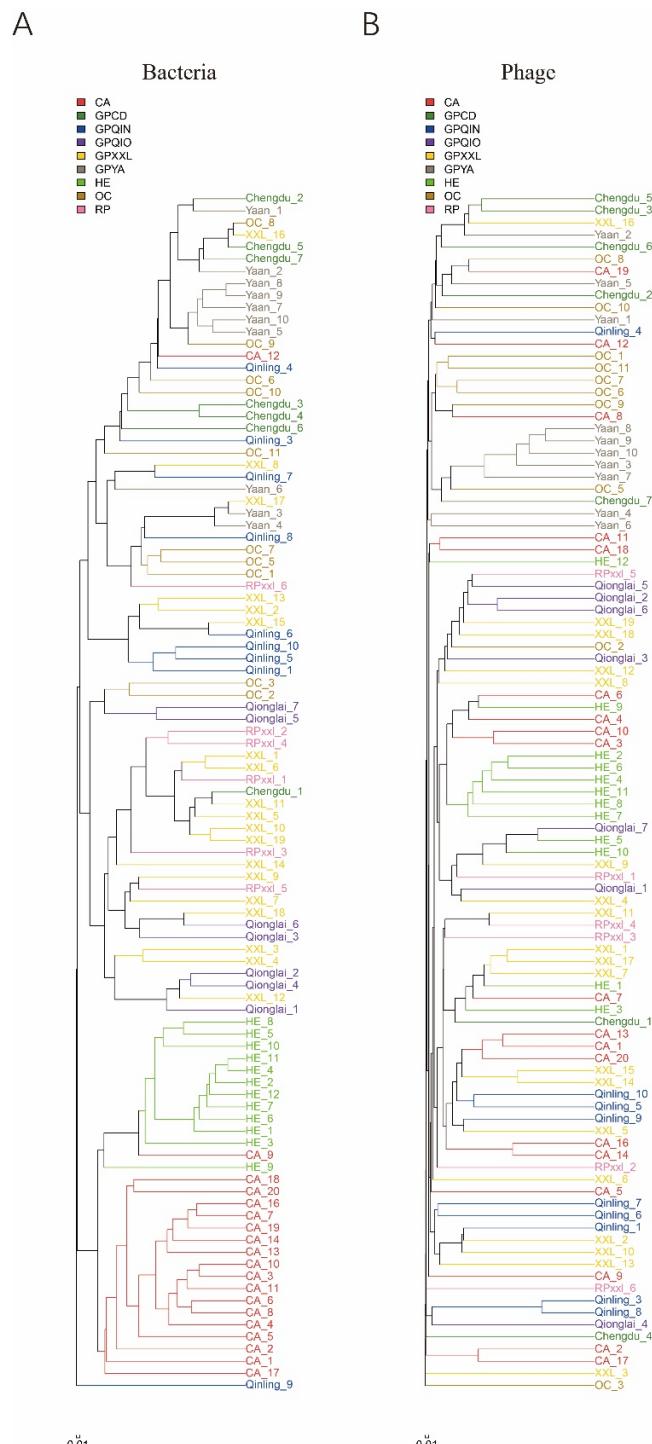

Figure S2 Co-occurrence network analysis of bacteria (A), and phage (B) communities in all groups. The nodes representing taxonomic groups of bacterial and phage are color-coded based on phylum and family, respectively. The size of the node represents the number of connections (degree value). Different colored edges to represent positive (green) and negative (red) correlations between nodes. GPCD, captivity giant panda in Chengdu. GPYA, captivity giant panda in Ya'an. GPQIN, wild giant panda in Qinling. GPQIO, wild giant panda in Qionglai. GPXXL, wild giant panda in Xiaoxiangling. RP, wild red panda in Xiaoxiangling. CA, carnivorous mammal. OC, omnivorous mammal. HE, herbivorous mammal.

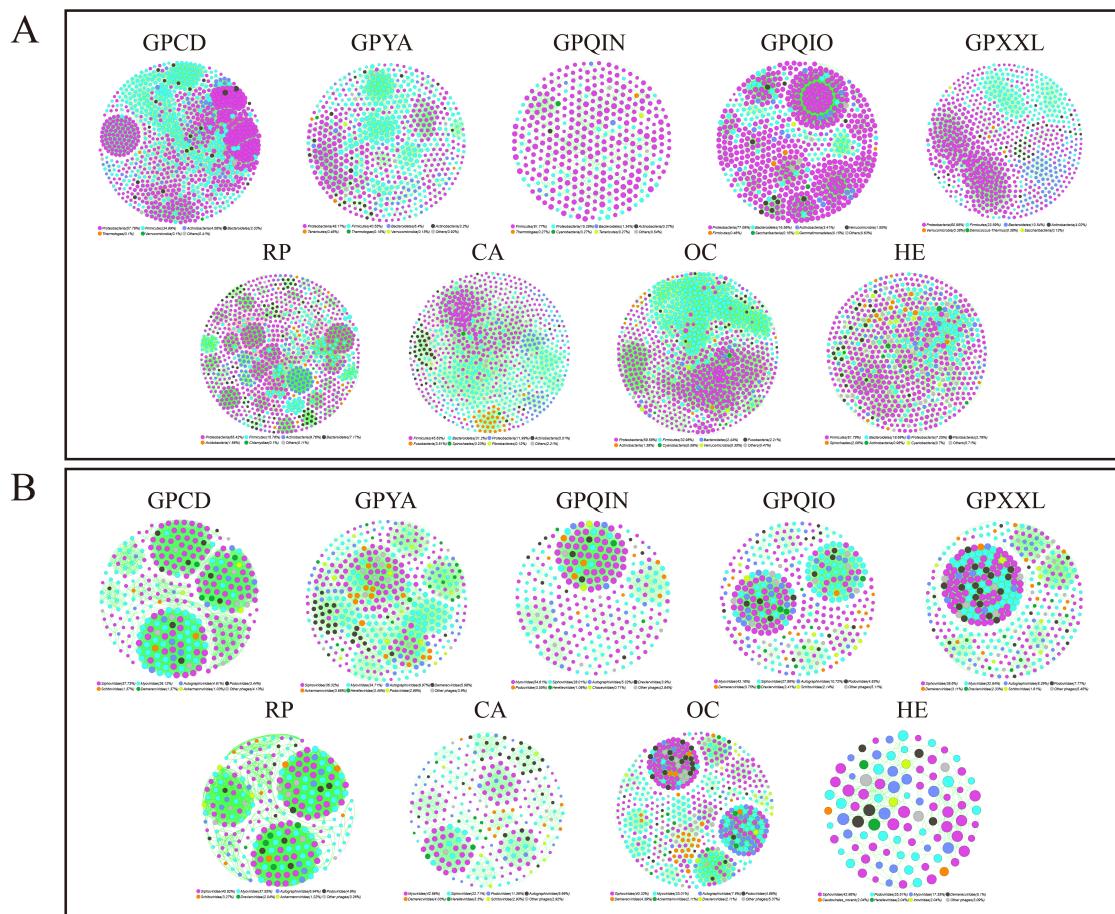

Figure S3 Modular structure of co-occurring networks of bacterial (A), phage (B), and bacterial-phage communities in all groups. The nodes affiliated with different modules were assigned distinct colors. The size of the node represents the number of connections (degree value). Different colored edges to represent positive (green) and negative (red) correlations between nodes. GPCD, captivity giant panda in Chengdu. GPYA, captivity giant panda in Ya'an. GPQIN, wild giant panda in Qinling. GPQIO, wild giant panda in Qionglai. GPXXL, wild giant panda in Xiaoxiangling. RP, wild red panda in Xiaoxiangling. CA, carnivorous mammal. OC, omnivorous mammal. HE, herbivorous mammal.

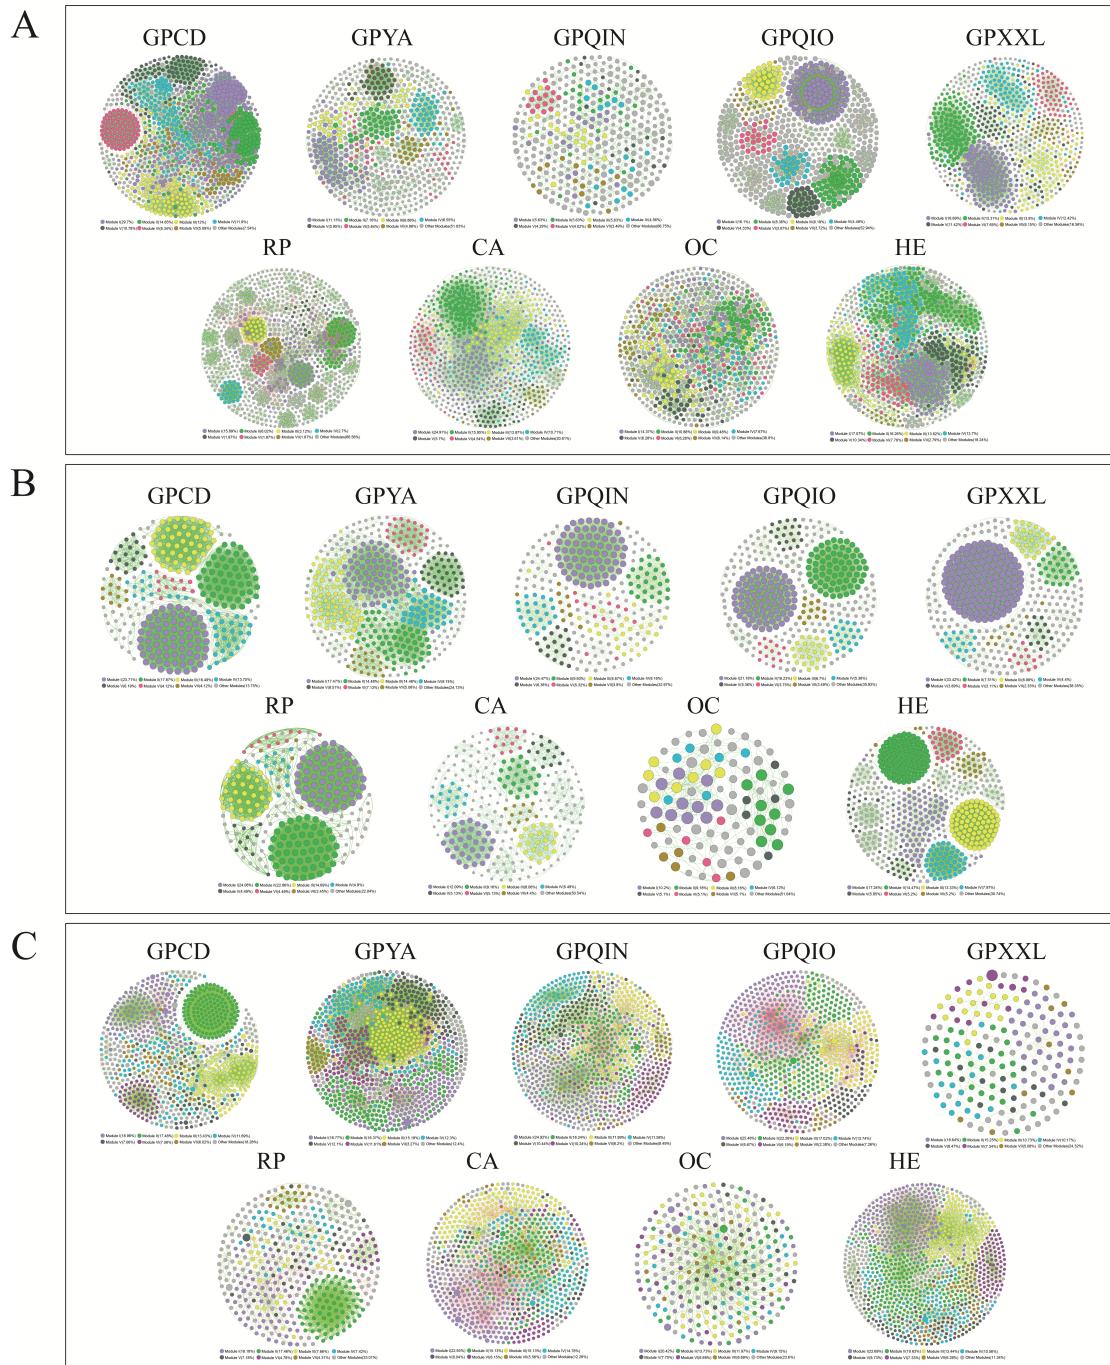

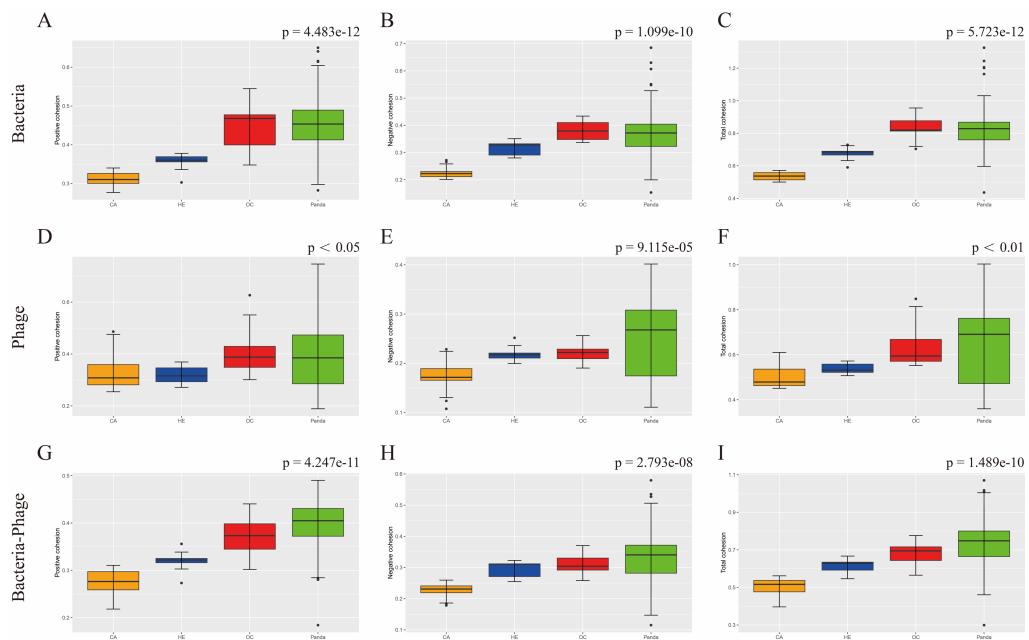

Figure S4 Cohesion levels of gut bacteria, phage, and bacteria-phage communities was assessed across four different dietary preferences animal groups (carnivores, herbivores, omnivores, and bamboo-eating animals). The positive cohesion in (A) bacteria, (D) phage, and (G)bacteria-phage networks. The negative cohesion in (B) bacteria, (E) phage, and (H)bacteria-phage networks. The total cohesion (the sum of the absolute values of the positive and negative cohesion values) in (C) bacteria, (F) phage, and (I)bacteria-phage networks. The significance levels were calculated by Kruskal-Wallis test. GPCD, captivity giant panda in Chengdu. GPYA, captivity giant panda in Ya'an. GPQIN, wild giant panda in Qinling. GPQIO, wild giant panda in Qionglai. GPXXL, wild giant panda in Xiaoxiangling. RP, wild red panda in Xiaoxiangling. CA, carnivorous mammal. OC, omnivorous mammal. HE, herbivorous mammal.
