

## SUPPLEMENTARY MATERIAL

**Figure S1.** Rarefaction curves of 16S rRNA sequences obtained by Illumina sequencing from seawater, *Millepora alcicornis* (Ma), *Mussismilia braziliensis* (Mb), and *Porites astreoides* (P). Each colored line represents the OTUs of the samples.

**Figure S2. (a)** Taxonomic classification and relative abundance of the bacterial phyla from seawater, *Millepora alcicornis*, *Mussismilia braziliensis*, and *Porites astreoides*. **(b)** Taxonomic classification and relative abundance of the bacterial classes from seawater, *Millepora alcicornis*, *Mussismilia braziliensis*, and *Porites astreoides*. The classifications were based on the Greengenes database, employing an 80% confidence threshold.

**Table S1.**  $\alpha$ -diversity indexes of the samples from seawater ( $n = 3$ ) and the corals *Millepora alcicornis* ( $n = 2$ ), *Mussismilia braziliensis* ( $n = 3$ ), and *Porites astreoides* ( $n = 3$ ).

\* Mean value of 3 replicates for seawater and *M. braziliensis*, and 2 replicates for *M. alcicornis* and *P. astreoides*.

**Table S2.** Hydrolysis index of enzyme production for lipase, keratinase, caseinase, amylase, chitinase, cellulase, and gelatinase by microorganisms isolated from the corals *Millepora alcicornis* (Ma), *Mussismilia braziliensis* (Mb), and *Porites astreoides* (P).
