

Supplementary material

Supplementary Figure S1. Effect of aerial part and root extracts of Fabaceae on the mortality of *X. index* *in vitro*. Free *X. index* were incubated with indicated aerial part and root extracts. The extracts were concentrated at 0, 5, 10 or 20 g.L⁻¹. Bioassays were monitored for 72 hours. The results presented correspond to three independent repetitions and bars indicate lowest and highest % mortality in the three repetitions.

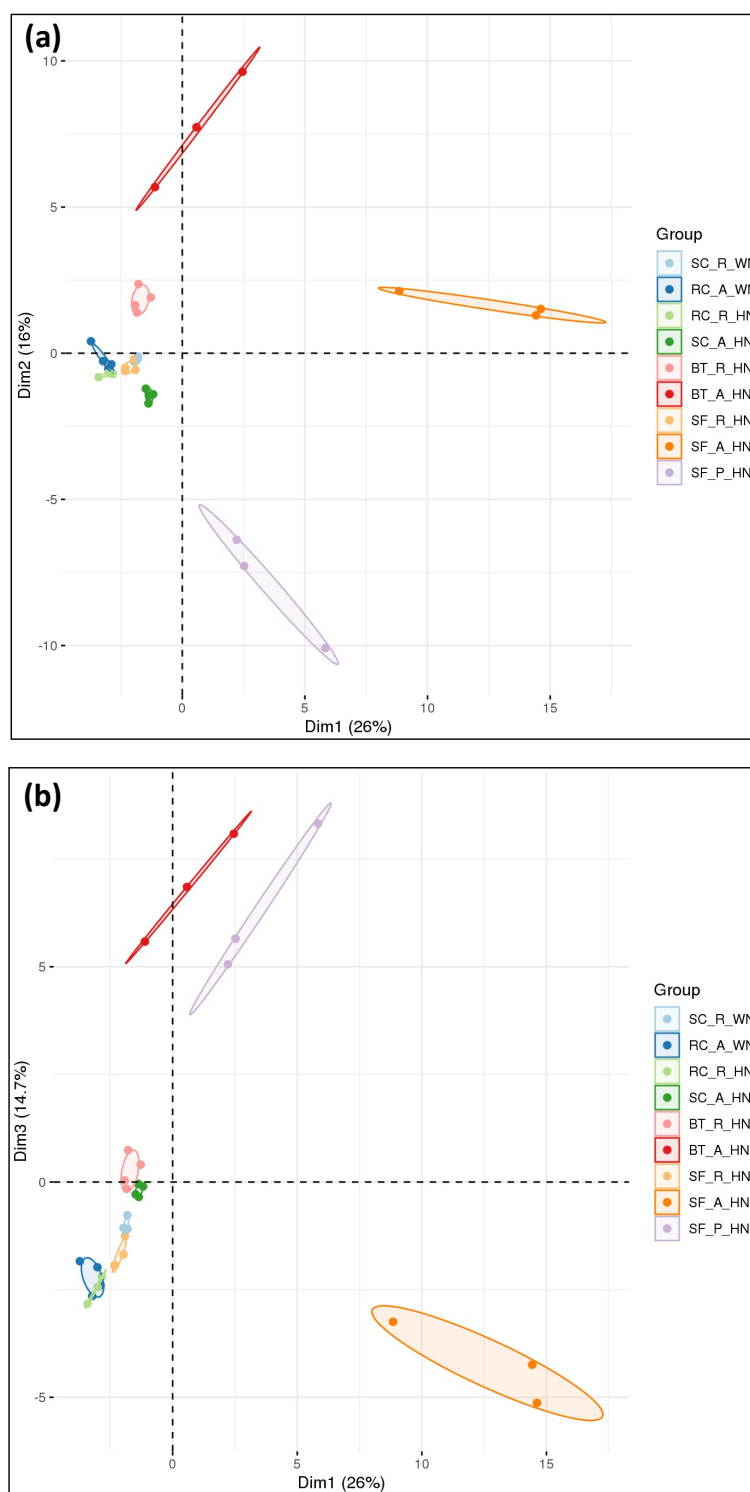

Supplementary Table S1. List of the 93 target molecules for metabolomic analyses. *m/z* : mass-to-charge ratio; RT: retention time; Glc: glucoside; GlcA: glucuronide; Rha: rhamnoside; Rut: rutinose. Metabolites indicated with * were not detected in quantifiable amounts in any of the plant extracts. Compounds indicated in bold were confirmed with authentic standards. Compounds indicated in italics were identified from the published literature.

Molecule name	Abbreviation name	Molecule family	Molecular formula	Theoretical <i>m/z</i> positive	Experimental <i>m/z</i> positive	Error positive (ppm)	Theoretical <i>m/z</i> negative	Experimental <i>m/z</i> negative	Error negative (ppm)	RT (min)

Supplementary Figure S2. Principal component analysis of metabolite contents in Fabaceae extracts. PCA was performed on relative amounts of all quantified compounds in the different Fabaceae extracts. Three or four replicates were performed for each analysis. The first two principal components explained 26% and 16% of the variance in the different groups of extracts, respectively **(a)**. The third principal components explained 14,7% **(b)**. SF: sainfoin, BT: birdsfoot trefoil, RC: red clover, SC: sweet clover. A: aerial parts, R: roots, P: pellets. HN: highly nematicidal; WN: weakly nematicidal extract.

Supplementary Figure S3. Volcano plot analyses of differentially accumulated metabolites between highly nematocidal and weakly nematocidal Fabaceae extracts. Volcano plot analyses were used to identify significant differentially accumulated metabolites between the following plant extracts: **(a)** SC-A (HN) compared to SC-R (WN); **(b)** RC-R (HN) compared to RC-A (WN); **(c)** All HN Fabaceae extracts compared to all WN extracts; RC: red clover, SC: sweet clover. A: aerial parts, R: roots, HN: highly nematocidal, WN: weakly nematocidal. Red and blue colors indicate over-accumulated and under-accumulated metabolites, respectively. The green line indicates the significance threshold p value = 0.05.
