## Xray crystallographic data

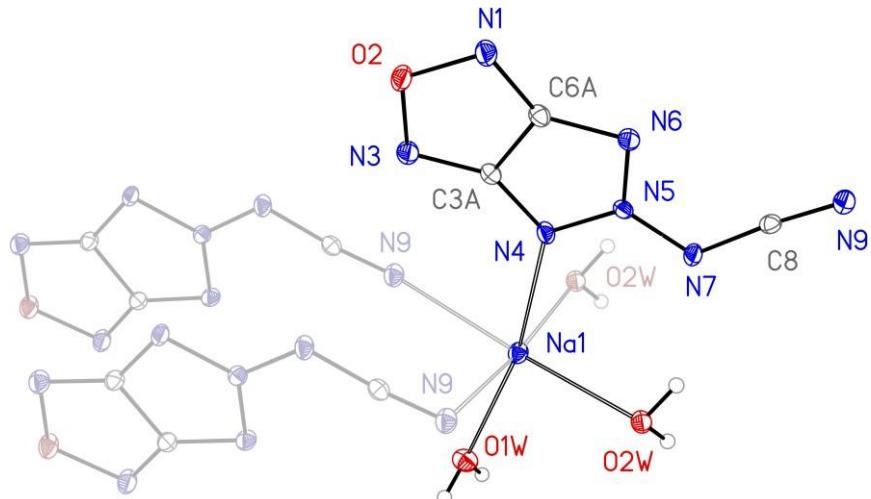

**Figure S1.** General view of the anion **3a** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

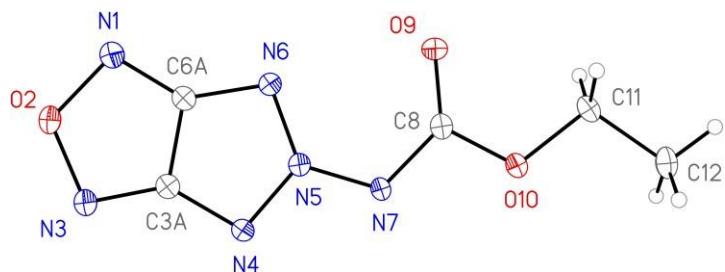

**Figure S2.** The environment of the potassium cation in crystal **3a** demonstrating its coordination by different heteroatoms of the anion and the acetonitrile molecule. The moieties constituting the asymmetric part of the unit cell are highlighted.

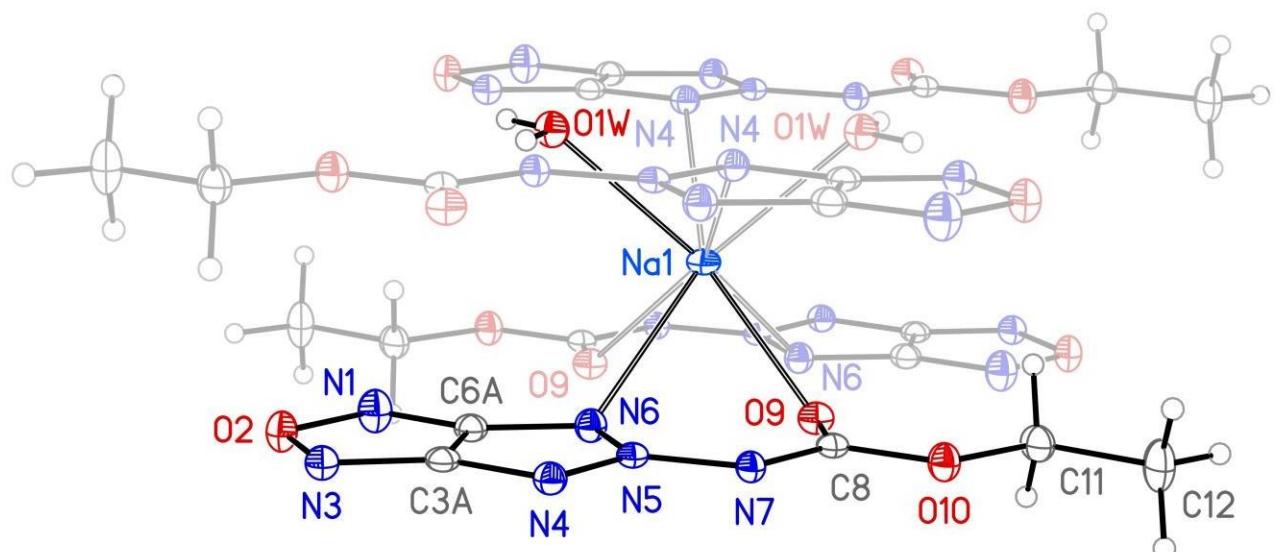

**Figure S3.** General view of the anion **3b** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

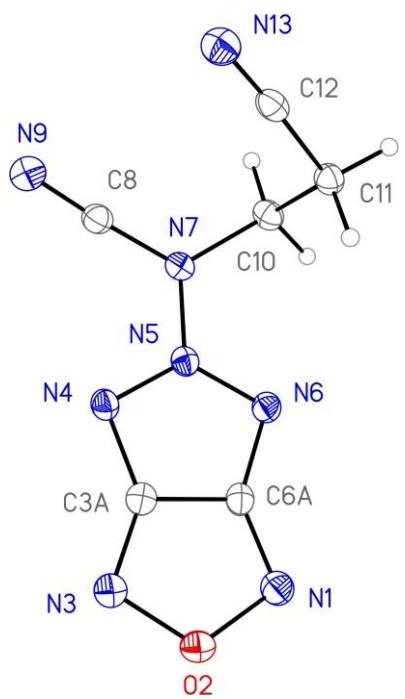

**Figure S4.** The environment of the sodium cation in crystal **3b** demonstrating its coordination by different heteroatoms of the anion and water molecules. The moieties constituting the asymmetric part of the unit cell are highlighted.

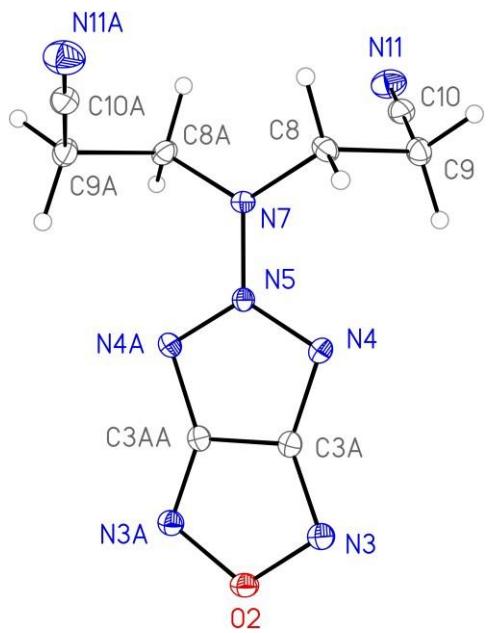

**Figure S5.** General view of the anion **3c** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

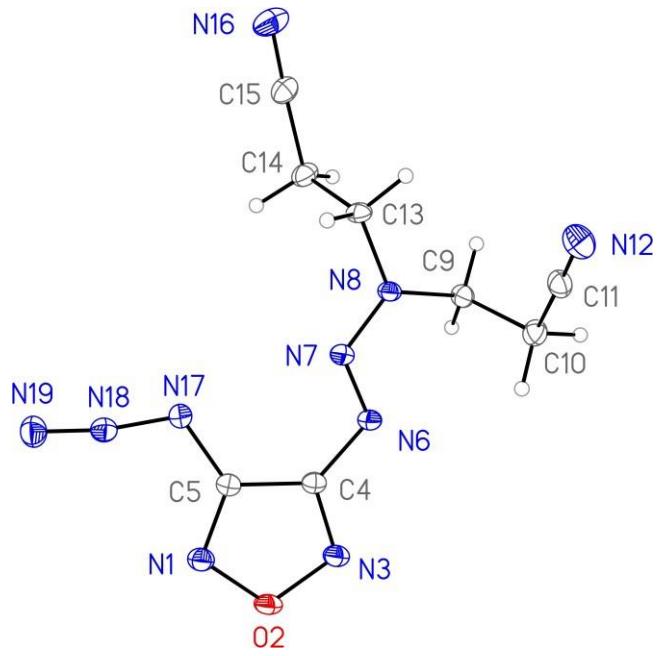

**Figure S6.** The environment of the sodium cation in crystal **3b** demonstrating its coordination by different heteroatoms of the anion and water molecules. The moieties constituting the asymmetric part of the unit cell are highlighted. The anion and the water molecule lie on a mirror plane and the sodium cation lies on the intersection of a 2-fold axis and a glide plane (sp. gr.  $C2/m$ ).

**Figure S7.** General view of the molecule **4b** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

**Figure S8.** General view of the molecule **6** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

**Figure S9.** General view of the molecule **7** in crystal. Anisotropic displacement parameters are drawn at 50% probability level.

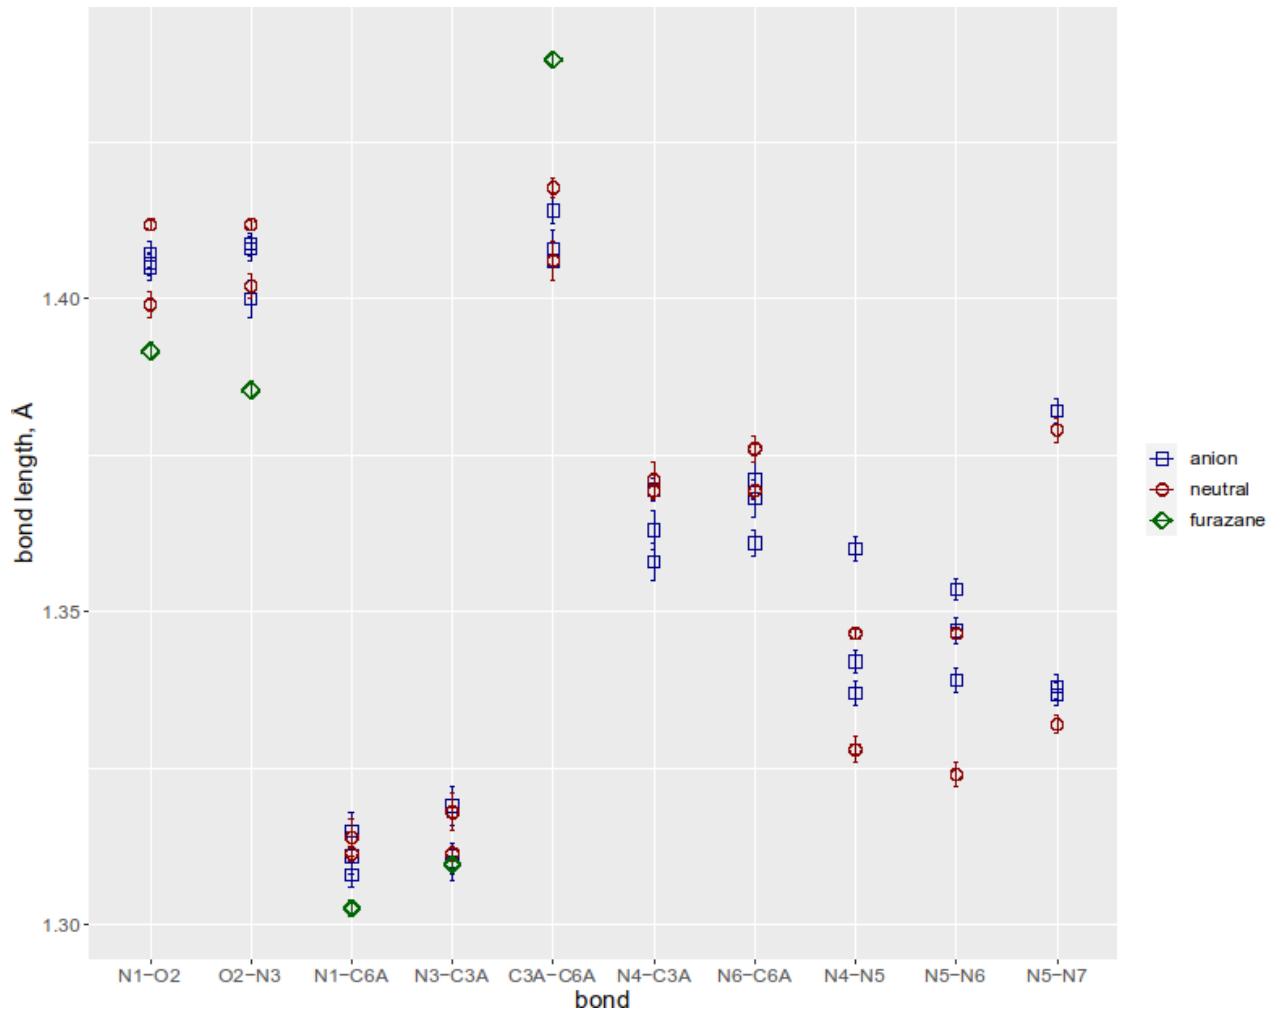

**Table S1.** Crystallographic data for crystals of compounds **3a–c**, **4b**, **6–7**.

\*Some bond lengths and angles for **6** are pairwise identical due to C<sub>2</sub> molecular symmetry in the crystal.

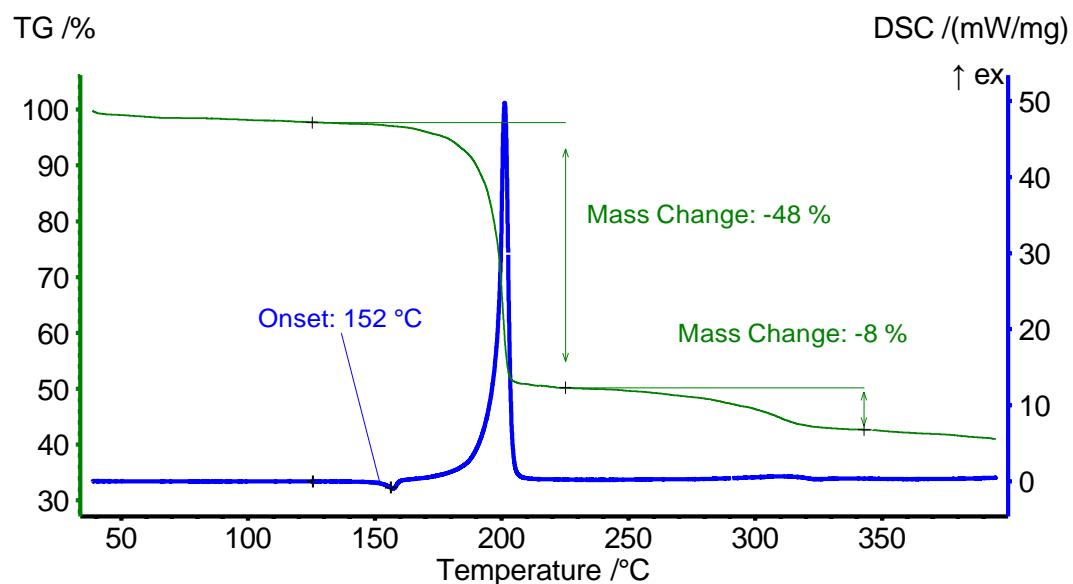

**Figure S10.** Graphical representation of bond length distribution in anions (**3a-3c**), neutral molecules (**4b** and **6**) and substituted furazane **7**. The s.u. values from the least square refinement are provided with error bars.

## Thermal behavior

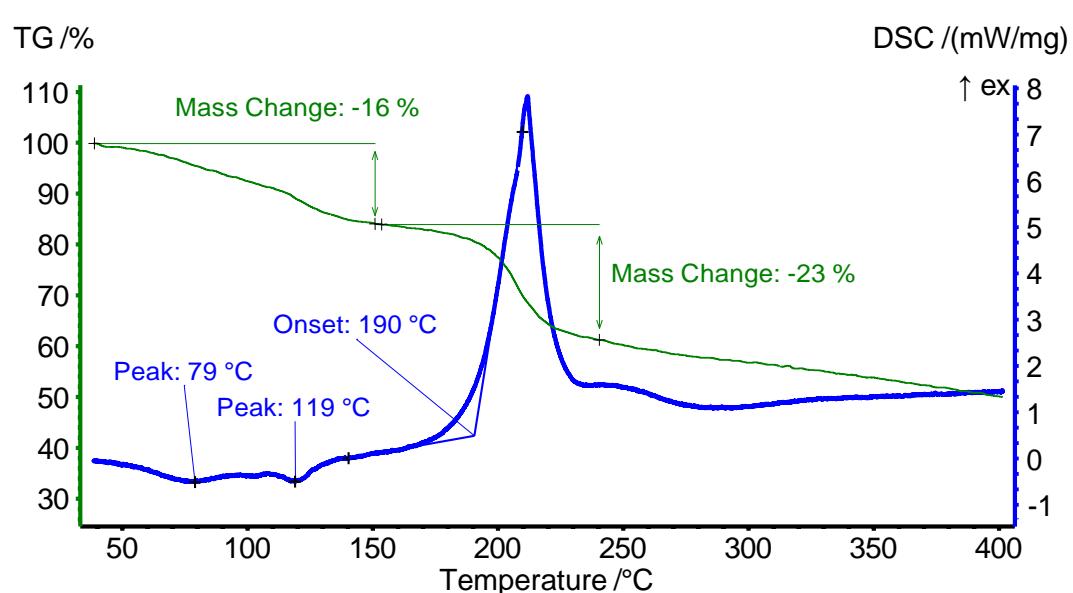

**Table S3.** Summary of thermal stability data

Compound	Melting point, °C	Decomposition onset,* °C
<b>3a</b>	152	152
<b>3b</b>	–	190
<b>3c</b>	–	122
<b>4b</b>	76	185
<b>4c</b>	61	233
<b>5</b>	127	127
<b>6</b>	139	234
<b>7</b>	79	79 (221)

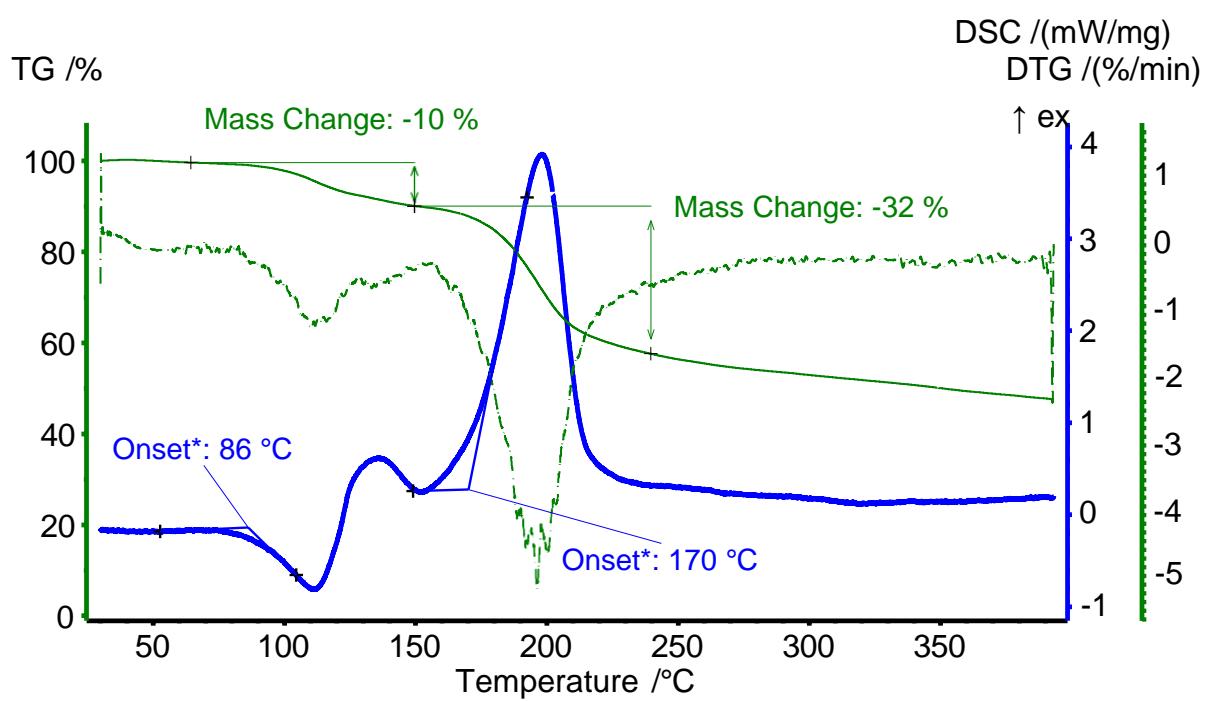

\*The extrapolated onset temperature of the exothermic peak by DSC at 5 K min<sup>-1</sup> rate.

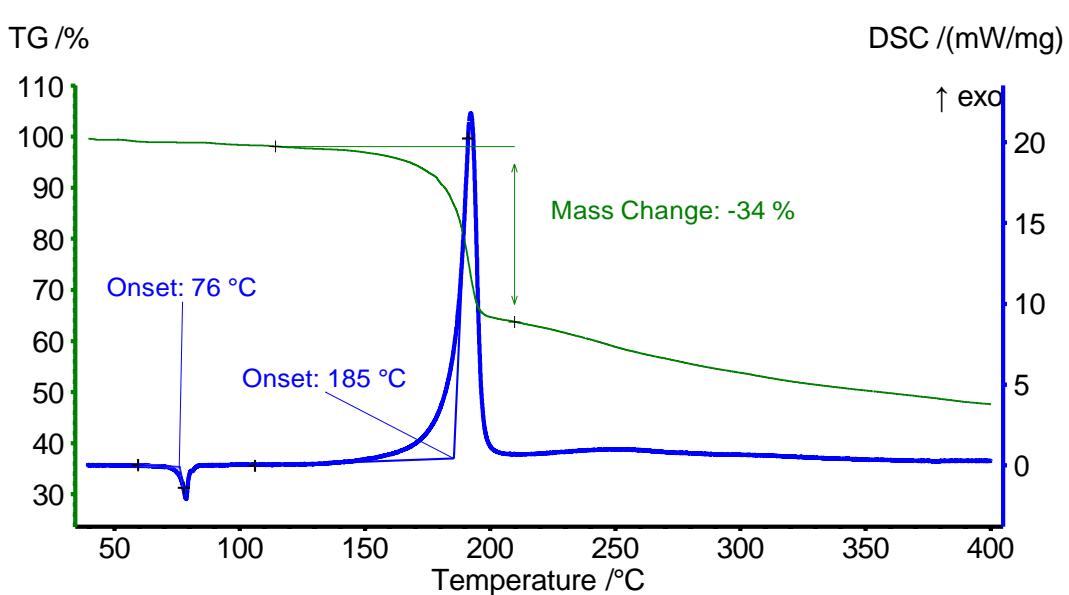

**Figure S11.** DSC (blue curve) and mass loss (TG, green curve) signals for **3a** heated at 5 K min<sup>-1</sup> rate.

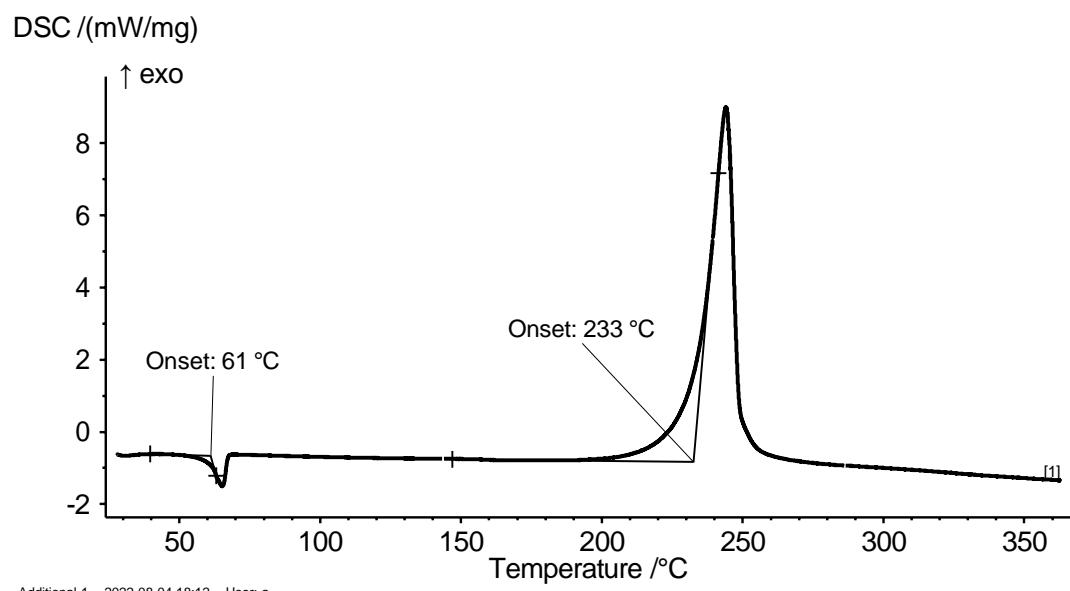

**Figure S12.** DSC (blue curve) and mass loss (TG, green curve) signals for **3b** heated at 5 K min<sup>-1</sup> rate.

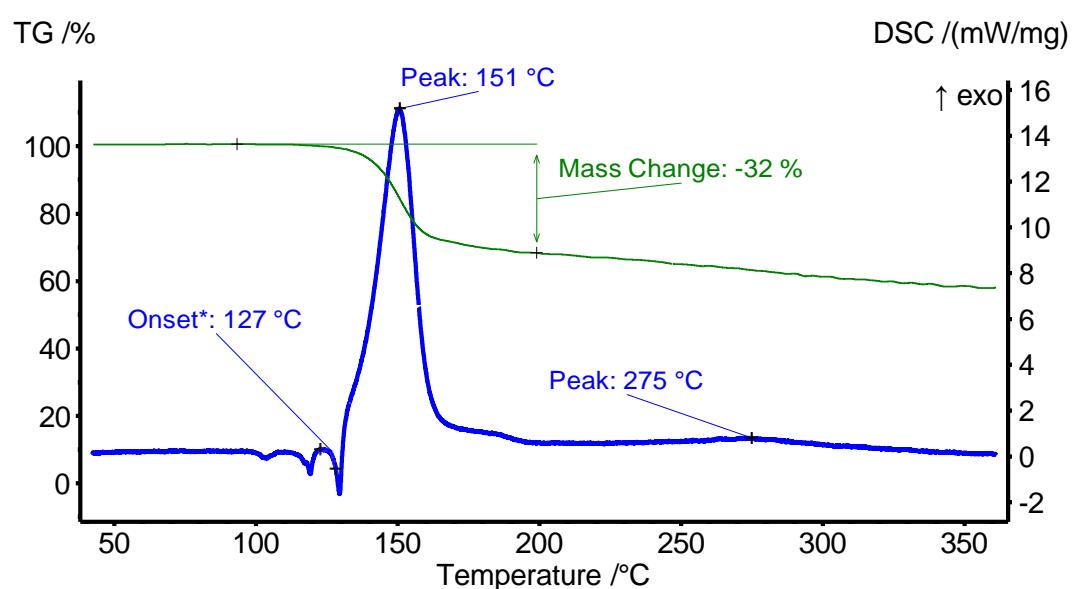

**Figure S13.** DSC/TG signal for **3c** heated at  $5 \text{ K min}^{-1}$  rate.

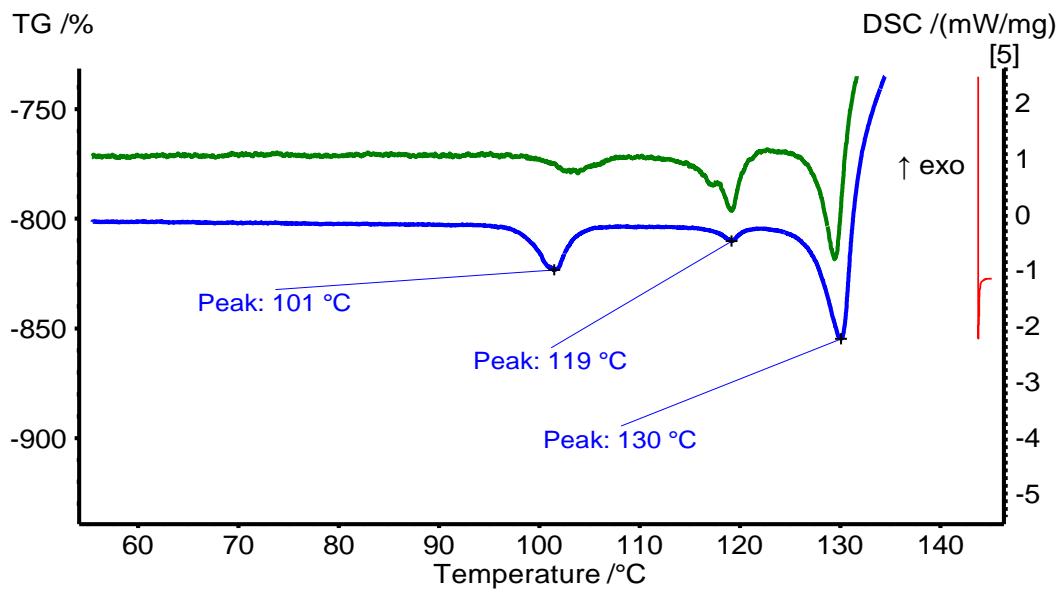

**Figure S14.** DSC (blue curve) and mass loss (TG, green curve) signals for **4b** heated at  $5 \text{ K min}^{-1}$  rate.
