

## Viability assay

**Test code: T-4-019-5**

**Institute / Researcher: prof.Dr. nora abo rehab**

**Experiment :** functional assay (MTT)  
(viability/cytotoxicity)

**samples number: 2**

**experiment design: viability against HepG2, Panc 1, Caco2, A549, Mcf7 and  
vero cells**

**laboratory comments:**

## **Viability assay**

### **MTT protocol**

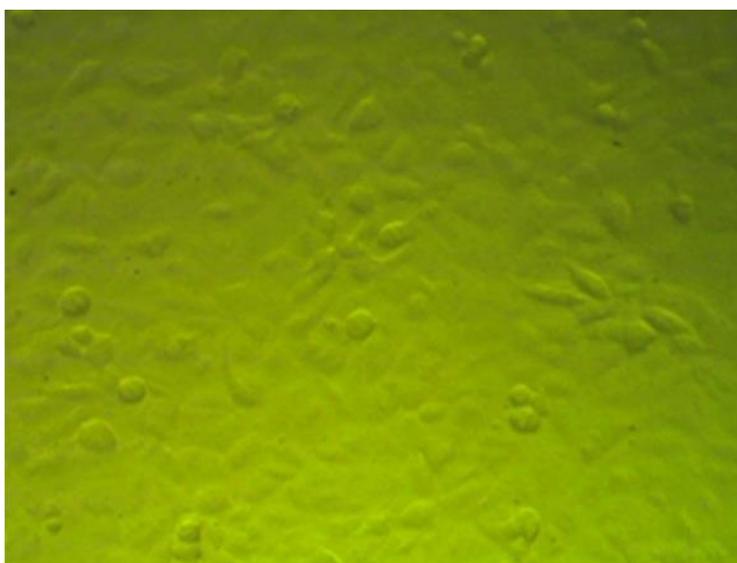

#### **Determination of sample cytotoxicity on cells (MTT protocol)**

- 1- the 96 well tissue culture plate was inoculated with  $1 \times 10^5$  cells / ml (100 ul / well) and incubated at 37°C for 24 hours to develop a complete monolayer sheet.
- 2- Growth medium was decanted from 96 well micro titer plates after confluent sheet of cells were formed, cell monolayer was washed twice with wash media.
- 3- two-fold dilutions of tested sample was made in RPMI medium with 2% serum (maintenance medium).
- 4- 0.1 ml of each dilution was tested in different wells leaving 3 wells as control, receiving only maintenance medium.
- 5- Plate was incubated at 37°C and examined. Cells were checked for any physical signs of toxicity, e.g. partial or complete loss of the monolayer, rounding, shrinkage, or cell granulation.
- 6- MTT solution was prepared (5mg/ml in PBS) (BIO BASIC CANADA INC).
- 8- 20ul MTT solution were added to each well. Place on a shaking table, 150rpm for 5 minutes, to thoroughly mix the MTT into the media.
- 9) Incubate (37C, 5% CO<sub>2</sub>) for 1-5 hours to allow the MTT to be metabolized.
- 10) Dump off the media. (dry plate on paper towels to remove residue if necessary).

11) Resuspend formazan (MTT metabolic product) in 200ul DMSO. Place on a shaking table, 150rpm for 5 minutes, to thoroughly mix the formazan into the solvent.

12) Read optical density at 560nm and subtract background at 620nm. Optical density should be directly correlated with cell quantity.
