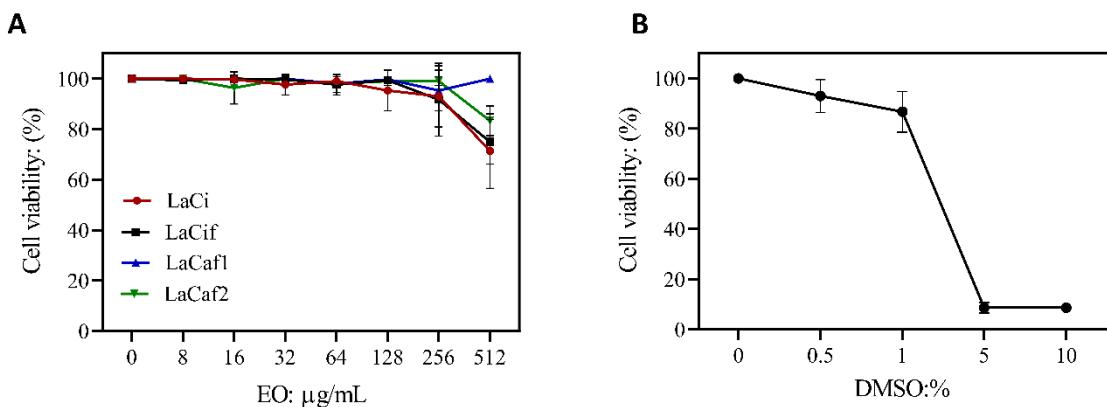

Figure S1. Representative results of the cytotoxicity assay. Essential oils and fractions of *L. alba* citral (LaCi and LaCif) and carvone (LaCaf1 and LaCaf2) chemotypes. Vero cells were cultured for 72 h in the presence of essential oil. Relative cell viability was measured by crystal violet quantification. Data represent averages and \pm SD of six independent measurements. Dimethyl sulfoxide (DMSO) is a positive control. The remaining ten essential oils studied (Table 1) showed similar results.
