Table S1. Chemical structures and physical properties of smoke-derived volatile phenols.

| | Guaiacol | 4-Methyl Guaiacol | <i>o</i>-Cresol | <i>m</i>-Cresol | <i>p</i>-Cresol | Syringol | 4-Methyl Syringol |
|--------------------------------|-----------------|------------------------------|------------------------|------------------------|------------------------|-----------------|------------------------------|
| Structure | | | | | | | |
| Molecular weight (amu) | 124.14 | 186.25 | 108.14 | 108.14 | 108.14 | 154.17 | 168.19 |
| Boiling point (°C) | 205 | 221 | 191 | 202 | 202 | 260 | 268 |
| Vapor pressure (mm Hg at 25°C) | 0.179 | 0.078 | 0.030 ¹ | 0.110 | 0.110 | 0.006 | 0.005 |

Values sourced from The Good Scents Company (www.thegoodscentscopy.com, accessed on 28th August 2022), except for the vapor pressure for 4-methylsyringol, which was sourced from ChemBK (www.chembk.com/en, accessed on 28th August 2022). ¹ Vapor pressure (mm Hg at 20 °C).

Table S2. Mean intensity ratings for sensory attributes of smoke-tainted Shiraz Sangiovese and Petit Verdot Sangiovese wines, before and after spinning cone column distillation.

| | Shiraz Sangiovese | | | | P | Petit Verdot Sangiovese | | | | P |
|---------------------|-------------------|----------|-----------|-----------|---------|-------------------------|----------|-----------|-----------|---------|
| | Control | 1% strip | 13% strip | 29% strip | | Control | 1% strip | 14% strip | 29% strip | |

| 2-methylbutanol | solvent | 129 | 806 | 2321 | 2207 | 1325 | 2571 | 2593 | 90% |
| 3-methylbutanol | harsh, nail polish, fusel | 131 | 1591 | 4453 | 4597 | 2423 | 4396 | 5034 | 90% |
| hexanol | green, grass | 157 | 211 | 497 | 353 | 201 | 353 | 250 | 90% |

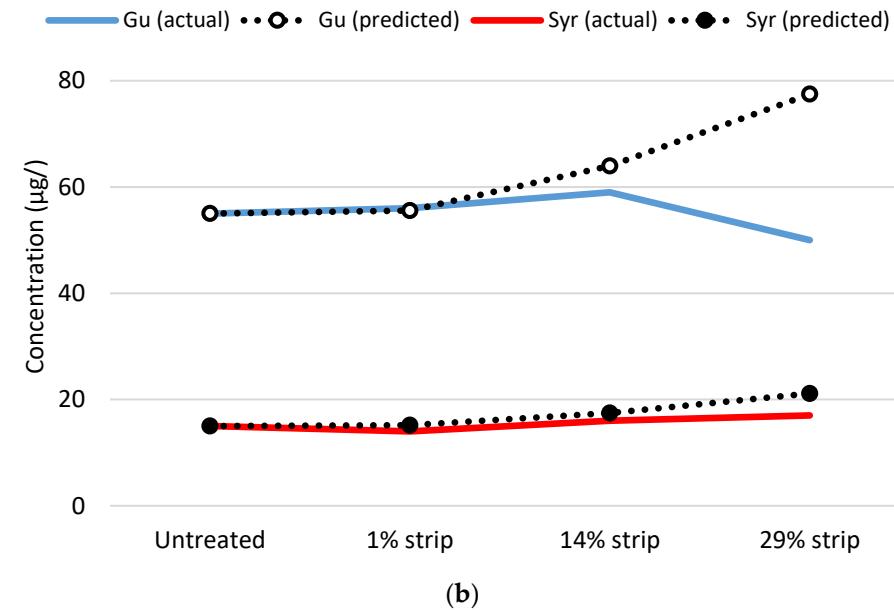

¹ Descriptors sourced from Wang et al. 2018 [56], Smyth 2005 [57], and publications cited therein. ² Values sourced from The Good Scents Company (www.thegoodscentscompany.com), accessed on 28th August 2022). ³ Values at/near saturation point appeared as constant numbers.

Table S4. Aroma and palate attributes evaluated during sensory analysis.

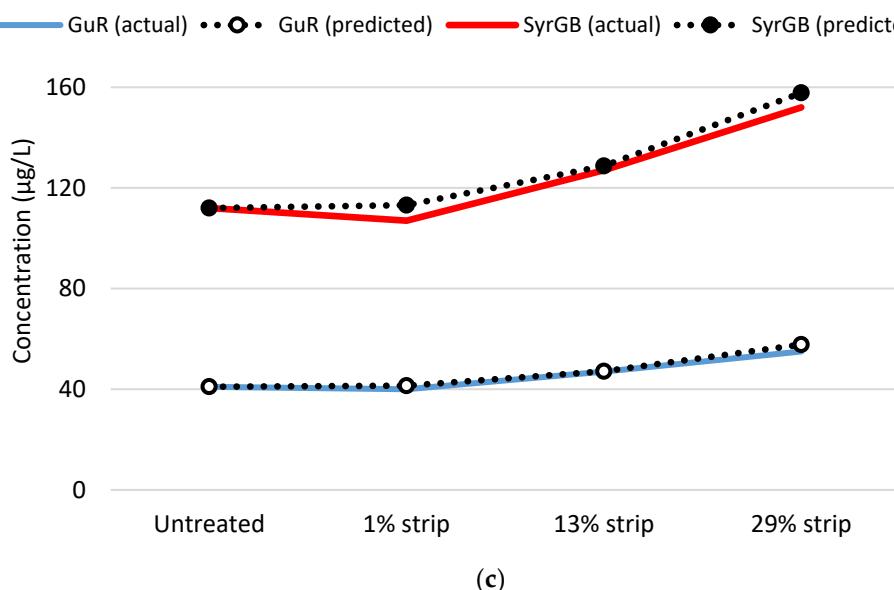

| Attributes | Definition |
|---------------------|--|
| fruit aroma | Intensity of the overall fruit aroma |
| smoke aroma | Perception of any type of smoke aroma, including smoked meat/bacon, toasty, charry, cigar-box, estery |
| cold ash aroma | Burnt aroma associate with ashes, including ashtray, tarry, campfire |
| earthy aroma | Any aroma associated with musty, dusty, wet-wood, barnyard, mushroom-like, dank, moldy, stagnant, stale |
| medicinal aroma | Aromatic characteristic of Band-Aids, disinfectant-like, including cleaning products, solvents, chemicals |
| burnt rubber aroma | Perception of burnt rubber-like aromas |
| reduced aroma | Perception of stinky, rubber, sulfur, garlic aromas |
| oxidized aroma | Perception of vinegar or bruised apple aroma |
| fruit flavor | Intensity of the overall fruit flavor |
| smoky flavor | Perception of smoke flavor, including bacon and smoked meat |
| medicinal flavor | Perception of medicinal flavors, including disinfectant-like, cleaning products and solvents |
| burnt rubber flavor | Perception of burnt rubber flavor |
| reduced flavor | Perception of stinky, rubber, sulfur, garlic flavor |
| oxidized flavor | Perception of vinegar or bruised apple flavor |
| ashy aftertaste | Length of taste associated with residue of ashtray perceived in the mouth after expectorating, including coal ash, ashtray, tarry, acrid, campfire |
| woody aftertaste | Length of taste associated with woody residue, includes wood, oak, pencil shavings |
| metallic | The 'tinny' flavor associated with metals |
| acidity | Intensity of sour/acid taste |
| bitterness | Intensity of bitter taste or aftertaste |
| saltiness | Intensity of salty taste |
| hotness | Intensity of warmth/heat due to ethanol |
| drying | Intensity of drying sensation in the mouth |
| astringency | Intensity of rough, puckering mouthfeel |

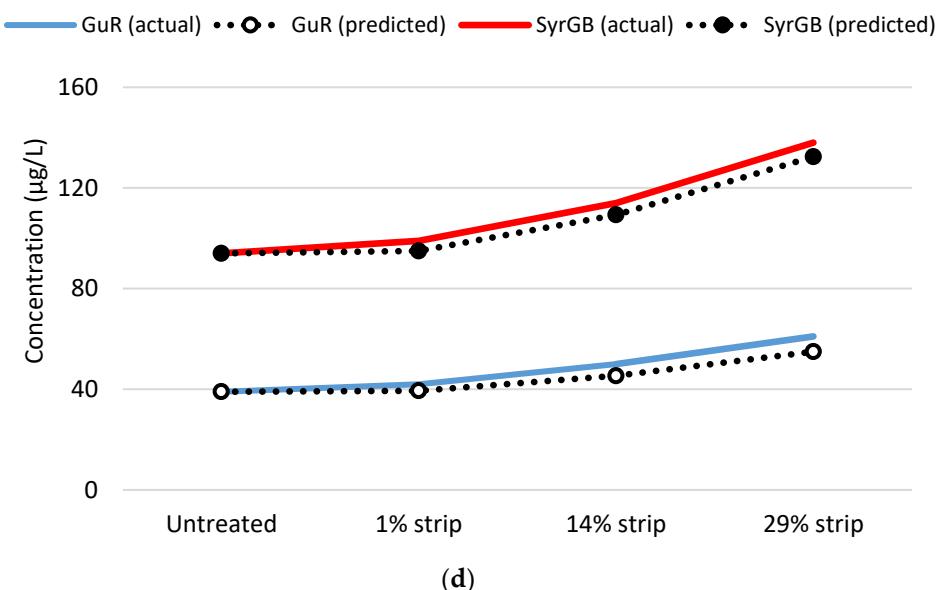

(a)

(b)

(c)

(d)

Figure S1. Predicted and actual concentrations of (a,b) guaiacol (Gu) and syringol (Syr), and (c,d) their glycoconjugates (GuR and SyrGB), in smoke-tainted (a,c) Shiraz Sangiovese and (c,d) Petit Verdot Sangiovese wines, before and after SCC distillation. Predicted concentrations were calculated by adjusting initial (untreated) concentrations based on 1%, 13–14% and 29% stripping rates (i.e., accounting for concentration due to removal of 1%, 13–14% and 29% of the initial wine volume).
