$^a\delta = T\Delta_{tr}S(W \rightarrow F + W)_{(B)} - T\Delta_{tr}S(W \rightarrow F + W)_{(A)}$

Table S16. Total number of water (W) and formamide (F) molecules in the solvation sphere of 18C6 $r = (r_W + r_F)$, mole fraction of formamide (F) in the solvation sphere of the solute (y_F), entropic factor of the transfer entropy of 18C6 in the process of preferential solvation at $T = 308.15$ K in dependency of the mole fraction of water (x_W) or formamide (x_F) in the mixture F +W.
