Table S1. The repeatability (three replicates, columns packed by 300, 420, 500, 620, 820 nm nonporous particles) of naphthalene and seven PAHs in pCEC ($n=3$).

| PAHs | 300 nm | | | | 420 nm | | | | 500 nm | | | | 620 nm | | | | 820 nm | | | |
|-------------------|---------------|---------|---|---------|-------------|---------|----------------------------------|---------|-------------|---------|----------------------------------|---------|-------------|---------|--------------|---------|-------------|---------|----------------------------------|---------|
| | t_R^a (min) | RSD (%) | A ^b ($\mu\text{V}\cdot\text{s}$) | RSD (%) | t_R (min) | RSD (%) | A ($\mu\text{V}\cdot\text{s}$) | RSD (%) | t_R (min) | RSD (%) | A ($\mu\text{V}\cdot\text{s}$) | RSD (%) | t_R (min) | RSD (%) | Avrea (mV/s) | RSD (%) | t_R (min) | RSD (%) | A ($\mu\text{V}\cdot\text{s}$) | RSD (%) |
| Naphthalene | 2.87 | 1.20 | 1081 | 0.32 | 2.94 | 0.62 | 2337 | 1.21 | 2.66 | 0.02 | 950 | 0.63 | 3.50 | 0.26 | 5228 | 0.07 | 4.32 | 0.25 | 1047 | 4.63 |
| Acenaphthylene | 3.04 | 1.61 | 2164 | 1.18 | 3.19 | 0.61 | 3063 | 1.25 | 2.78 | 0.02 | 1287 | 0.89 | 3.79 | 0.22 | 5123 | 1.19 | 4.65 | 0.30 | 1467 | 4.91 |
| Fluorene | 3.45 | 0.62 | 2464 | 0.97 | 3.59 | 0.60 | 3761 | 1.82 | 3.06 | 0.02 | 1592 | 1.01 | 4.31 | 0.22 | 6229 | 0.95 | 5.33 | 0.41 | 1747 | 6.09 |
| Phenanthrene | 3.69 | 0.16 | 3986 | 1.46 | 3.95 | 0.59 | 4797 | 0.97 | 3.24 | 0.04 | 1949 | 2.05 | 4.72 | 0.17 | 7814 | 1.14 | 5.83 | 0.50 | 2519 | 2.04 |
| Anthracene | 3.87 | 0.62 | 3251 | 0.02 | 4.18 | 0.59 | 3103 | 1.60 | 3.42 | 0.02 | 1182 | 3.64 | 4.99 | 0.15 | 6975 | 1.27 | 6.22 | 0.52 | 2135 | 0.89 |
| Fluoranthene | 4.34 | 0.20 | 2967 | 0.51 | 4.81 | 0.56 | 2990 | 2.29 | 3.73 | 0.05 | 1145 | 3.14 | 5.74 | 0.12 | 5034 | 1.88 | 7.13 | 0.66 | 1418 | 2.50 |
| Benzanthracene | 5.76 | 0.65 | 2980 | 3.17 | 6.80 | 0.61 | 2911 | 0.70 | 4.93 | 0.04 | 667 | 4.05 | 7.97 | 0.21 | 4133 | 4.91 | 10.25 | 0.95 | 1241 | 4.63 |
| Benzofluoranthene | 7.58 | 0.04 | 1525 | 2.26 | 9.39 | 0.75 | 3536 | 2.04 | 6.45 | 0.04 | 449 | 0.56 | 10.76 | 0.40 | 4182 | 7.40 | 14.23 | 1.30 | 1457 | 1.13 |

^a tR (min) = Average Retention time.

^b A (mV/s) = Average Peak area.

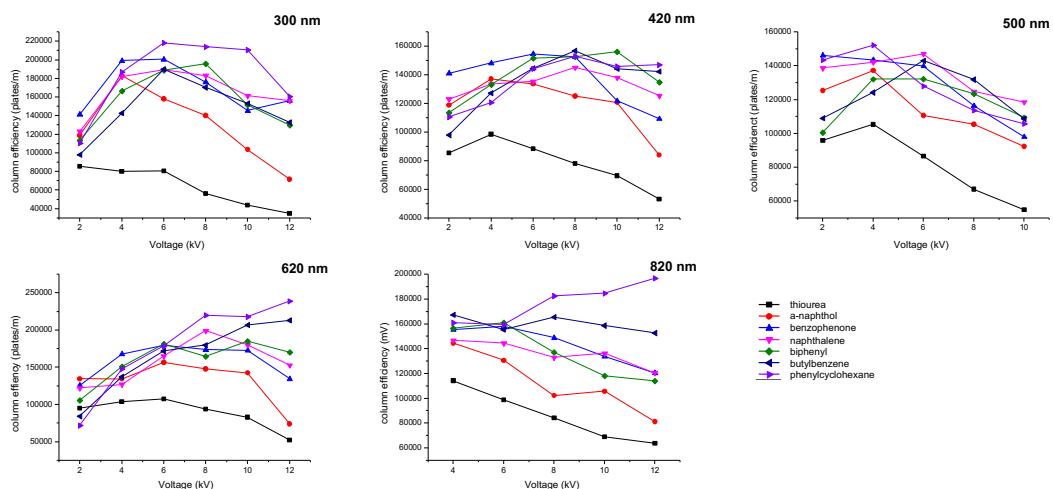

Figure S1. Column efficiency curves of thiourea and six aromatic compounds in 300, 420, 500, 620, 820 nm non-porous submicron packed columns. Peaks: 1) Thiourea; 2) a-naphthol; 3) benzophenone; 4) naphthalene; 5) biphenyl; 6) butylbenzene and 7) phenylcyclohexane.

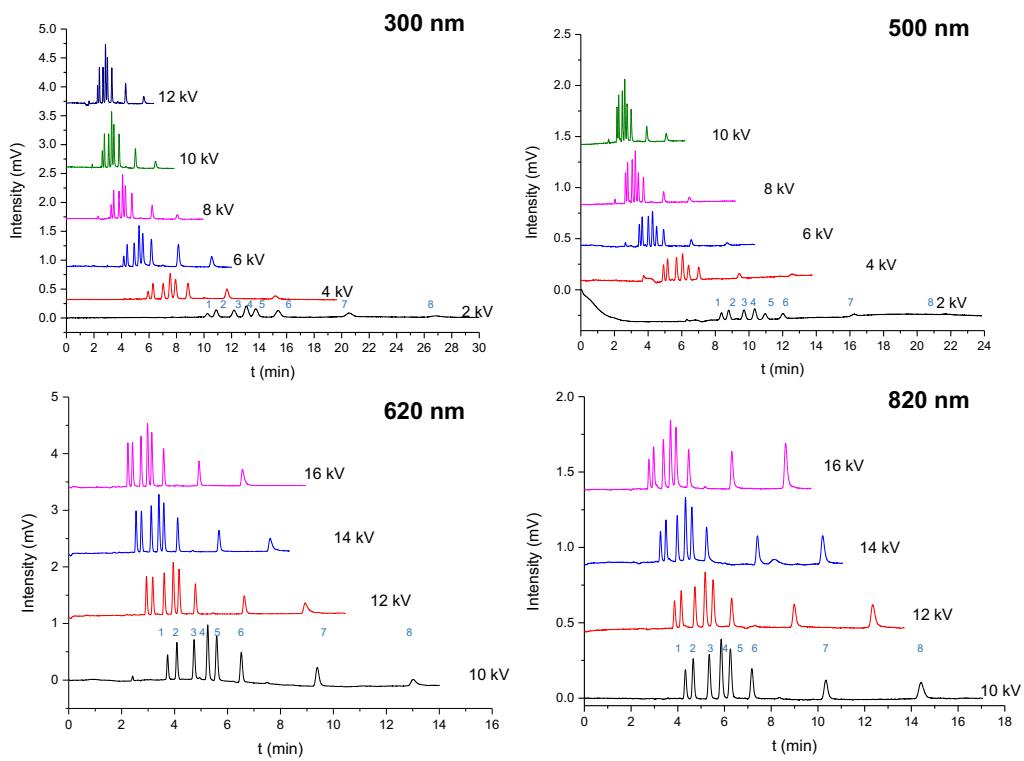

Figure S2. pCEC separation of eight PAHs at voltages of 2 kV to 16 kV on the columns packed with 300, 420, 500, 620, and 820 nm particles. Experimental conditions: Column: 100 μm i.d. \times 100/300 mm (effective/total length); Pressure = 15.5 MPa; Mobile phase: acetonitrile–10 mM phosphate buffer (60:40, v/v); pH = 7.8; Split ratios 800:1. Peaks: 1) Naphthalene, 2) Acenaphthylene; 3) Fluorene; 4) Phenanthrene; 5) Anthracene; 6) Fluoranthene; 7) Benzoanthracene and 8) Benzofluoranthene.

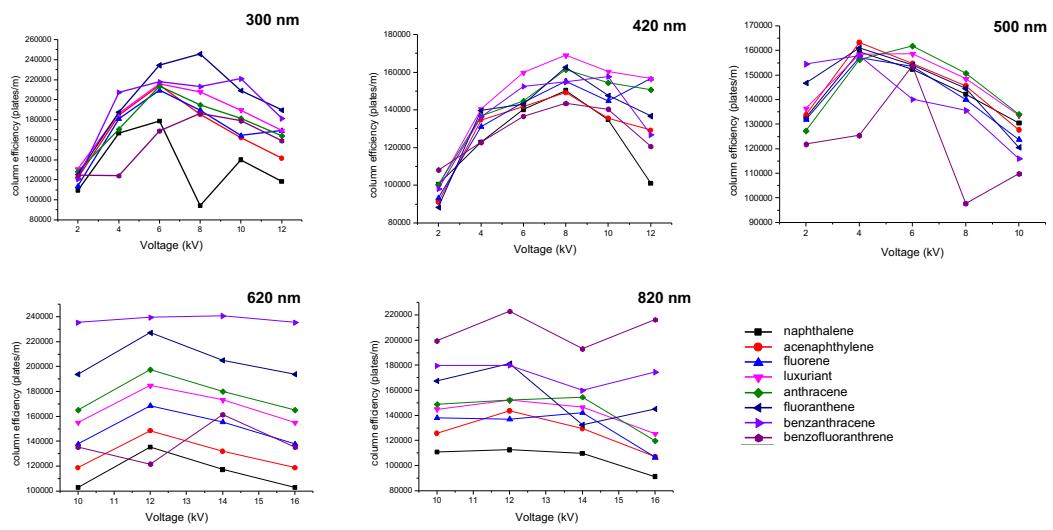

Figure S3. Column efficiency curves of eight PAHs on the columns packed with 300, 420, 500, 620, and 820 nm particles. Peaks: 1. naphthalene; 2. acenaphthylene; 3. fluorene; 4. luxuriant; 5. anthracene; 6. fluoranthene; 7. benzanthracene; 8. Benzofluoranthrene.

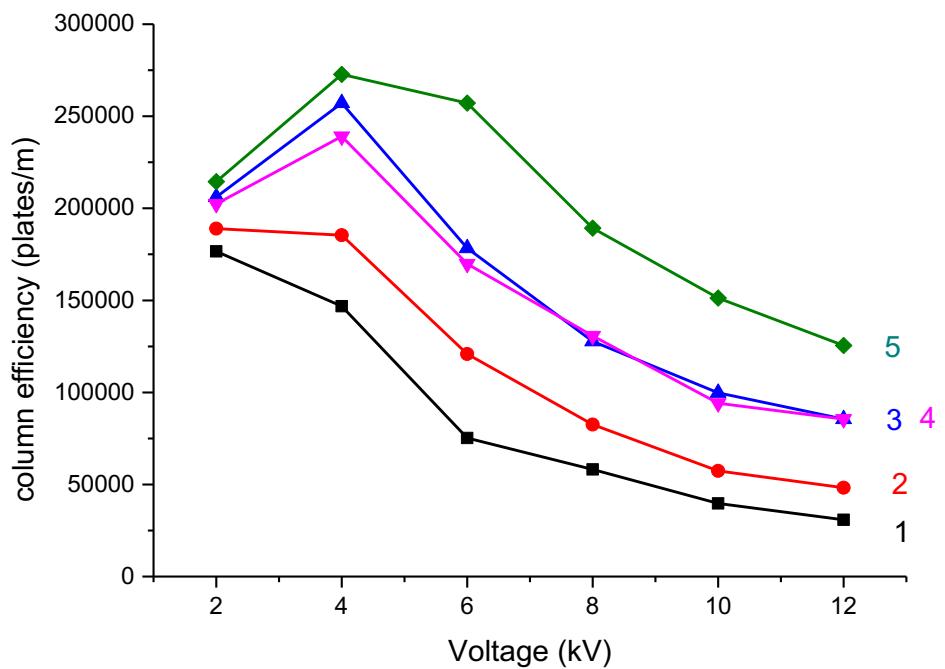

Figure S4. Column efficiency curves of five Estrogens in 300 nm non-porous submicron packed column. 1) E3; 2) BPA; 3) E2; 4) E1; 5) HE.
