Calculation of Half life of 5a in Human serum stability

$y = -0.031x + 4.3339$, where $y = \ln \text{conc. of 5a}$ and $x = \text{time (minutes)}$

$$X = (y - 4.3339) / -0.031$$

For $t_{1/2}$

$$x_{1/2} = (\ln 50 - 4.3339) / -0.031$$

$$= (3.912 - 4.3339) / -0.031$$

$$= 13.609 \text{ min}$$
