## **Supplementary Material**

Table S1-S4: Whole-cell recording of data analysis for 2,3-BDZ compounds;

Table S5: IC<sub>50</sub> values. IC<sub>50</sub> calculated values for 2,3-BDZ compounds;

Figure S1: The inhibition assays of four 2,3-BDZ derivatives on GluA1, GluA2, GluA1/2, and GluA2/3 subunits

## Table of Contents

Receptor/Subunit	2,3-BDZ Derivatives	2,3-BDZ-1	2,3-BDZ-2	2,3-BDZ-3	2,3-BDZ-4
GluA2/3	<b>IC<sub>50</sub></b>	3.09	3.45	5.76	6.69
	<b>Log IC<sub>50</sub></b>	0.49	0.54	0.76	0.83
	<b>R square</b>	0.97	0.97	0.99	0.99

**Supplemental Figure S1: The inhibition assays of four 2,3-BDZ derivatives on GluA1, GluA2, GluA1/2, and GluA2/3 subunits.** These four figures depict the A/A<sub>I</sub> ratio, which signifies the ratio between normal (excitatory) and inhibitory currents. a shows the A/A<sub>I</sub> measured for GluA1 subunit after applying the four 2,3-BDZ compounds, while b shows the A/A<sub>I</sub> measured for GluA1/2 subunit after applying the four 2,3-BDZ compounds, c shows the A/A<sub>I</sub> measured for GluA2 subunit after applying the four 2,3-BDZ compounds, and d shows the A/A<sub>I</sub> measured for GluA2/3 subunit after applying the four 2,3-BDZ compounds. The experiment involves conducting a whole-cell current recording under controlled conditions of pH 7.4, temperature of 22 °C, and a voltage of -60 mV. The data are presented in the format of mean ± standard error of the mean (SEM), with a sample size of n = 8 representing the number of patch cells in the whole-cell configuration. The statistical significance of the one-way ANOVA results is denoted as follows: (\*\*) p < 0.01, and (\*\*\*) p < 0.001.
