

## Supporting Information

**Manuscript Title:** Methyl and ethyl ethers of glycerol as potential green low-melting technical fluids

**Manuscript Authors:** V.O. Samoilov, V.M. Lavrentev, M.U. Sultanova, D.N. Ramazanov, A.A. Kozhevnikov, G. A. Shandryuk, M.I. Kniazeva, A.L. Maximov

**Authors' affiliation:** Topchiev Institute of Petrochemical Synthesis, Russian Academy of Sciences, Leninsky pr. 29, Moscow 119991, Russia

### Contents:

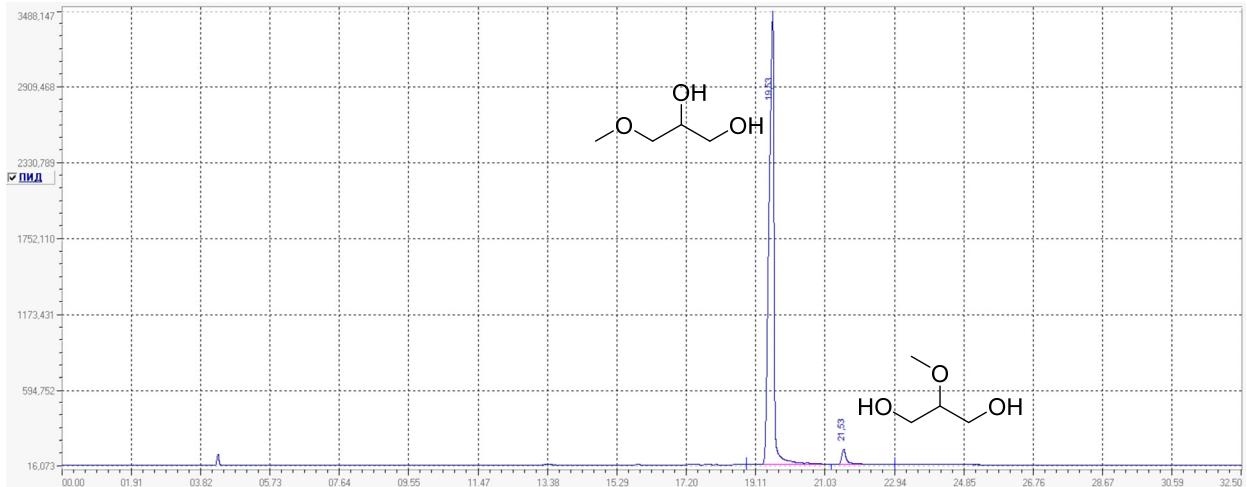

**Figures S1–S4.** The chromatograms of the synthetic samples of glycerol ethers.

**Figures S5–S11.** The DSC curves for pure ethers and aqueous solutions.

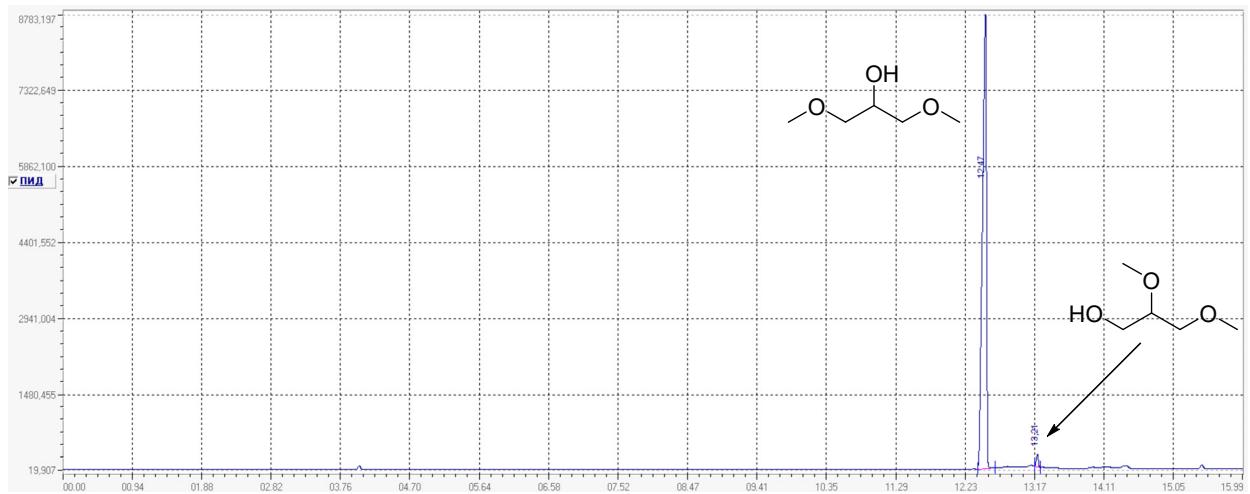

**Table S1.** Density measurements: calibration, raw data and uncertainties.

**Table S2.** Viscosity measurements: calibration, raw data and uncertainties.

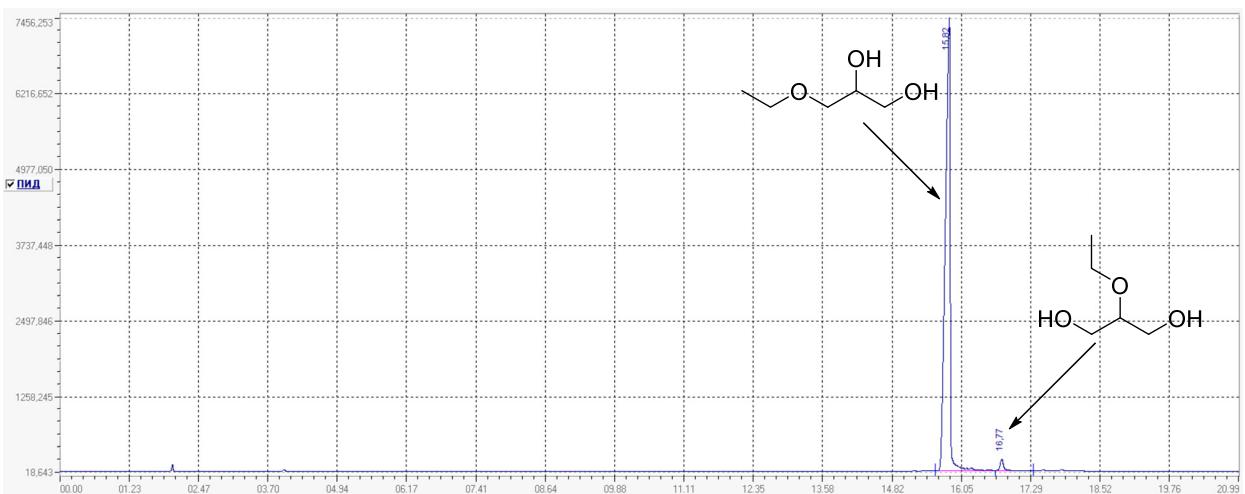

### The chromatograms of the synthetic samples of glycerol ethers.

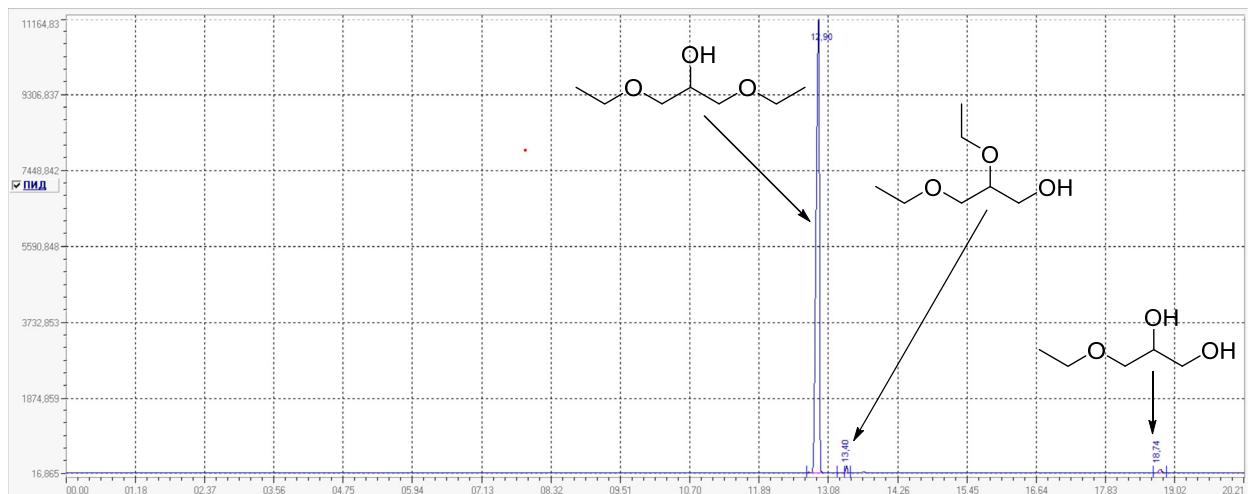

**Figure S1.** The GC-FID chromatogram for GMME sample.

**Figure S2.** The GC-FID chromatogram for GDME sample.

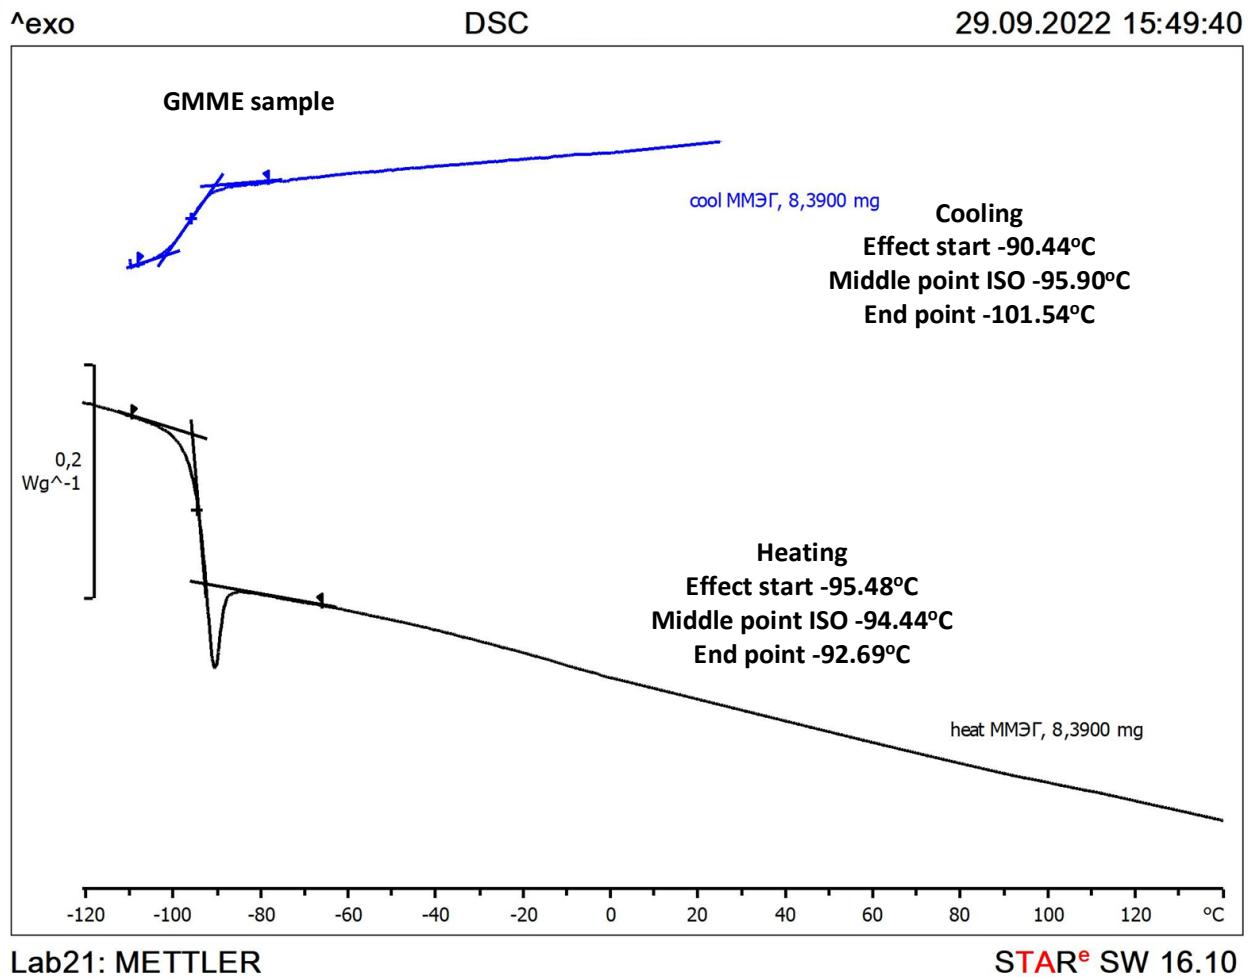

**Figure S3.** The GC-FID chromatogram for GMEE sample.

**Figure S4.** The GC-FID chromatogram for GDEE sample.

**The DSC curves for pure ethers and aqueous solutions.**

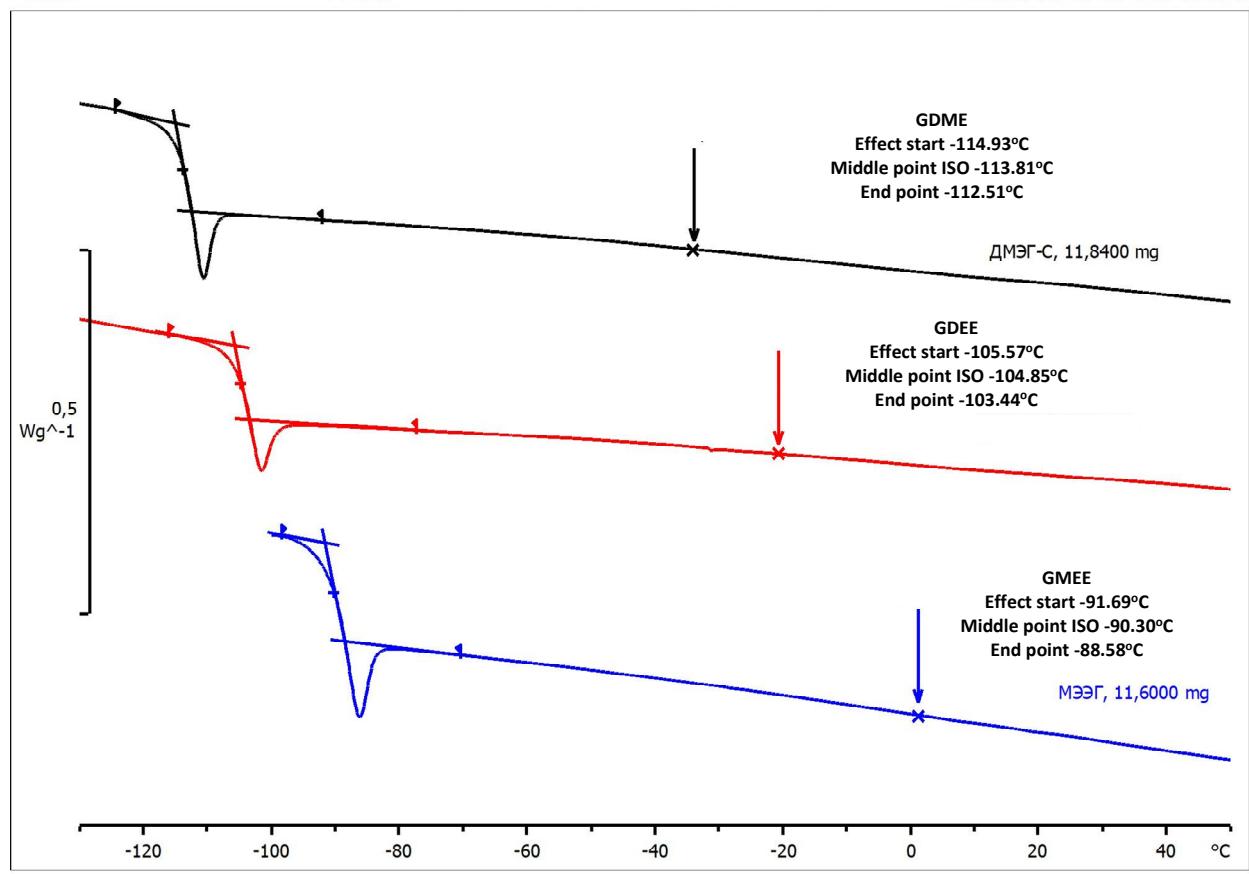

**Figure S5.** The DSC curves for GMME sample (low-temperature phase transition screening).

### Density measurements: calibration, raw data and uncertainties.

#### Density measurements

Apparatus: ‘VIP-2MR’ vibration densimeter (‘Termeks’, Tomsk, Russia).

Calibration:

- a) dry air,  $T=20^{\circ}\text{C}$ , individual values 0.0012; 0.0012; 0.0012  $\text{g mL}^{-1}$ ; reference value 0.0012  $\text{g mL}^{-1}$ .
- b) distilled water (standard reference sample),  $T=20^{\circ}\text{C}$ , individual values 0.9982; 0.9982; 0.9982  $\text{g mL}^{-1}$ ; reference value 0.9982  $\text{g mL}^{-1}$ .

The raw data for the density of the glycerol ether aqueous solution samples is presented in the Table S1.

**Table S1.** The raw density data for the glycerol ether aqueous solution samples. MV – mean value, relSD – standard deviation expressed in %.

## Viscosity measurements: calibration, raw data and uncertainties.

### Kinematic viscosity measurements

**Apparatus:** ‘VPZh-4’ glass capillary viscometer (‘Ekros’, Moscow, Russia) with a metrological certificate, KRIО-VIS-T-06-01 bath thermostat (‘Termeks’, Tomsk, Russia).

**Calibration:** for an additional control of the accuracy of the measurements, viscosities of lab-prepared distilled water were measured.

Measured values: 1.004 mm<sup>2</sup> s<sup>-1</sup> at 20°C, 0.658 mm<sup>2</sup> s<sup>-1</sup> at 40°C, 0.365 mm<sup>2</sup> s<sup>-1</sup> at 80°C.

Reference values: 1.0034 mm<sup>2</sup> s<sup>-1</sup> at 20°C, 0.6579 mm<sup>2</sup> s<sup>-1</sup> at 40°C, 0.3643 mm<sup>2</sup> s<sup>-1</sup> at 80°C.

The reference values were taken from Anton Paar open source (<https://wiki.anton-paar.com/be-en/water/>).

The raw data for the viscosity of the glycerol ether aqueous solution samples is presented in the Table S2.

**Table S2.** The viscosity raw data for the glycerol ether aqueous solution samples.
