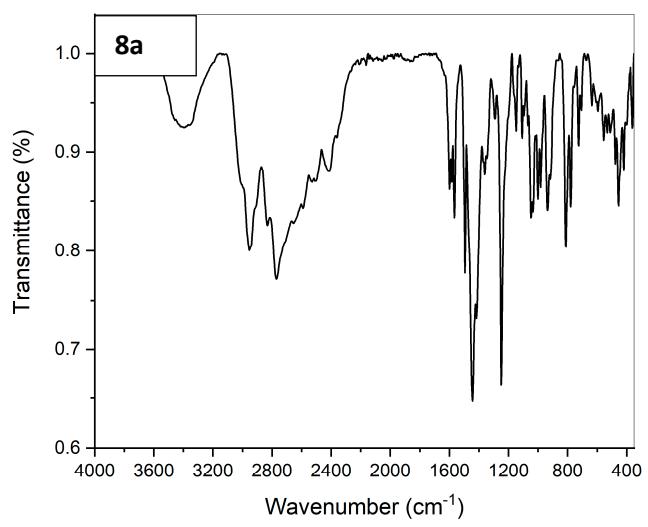

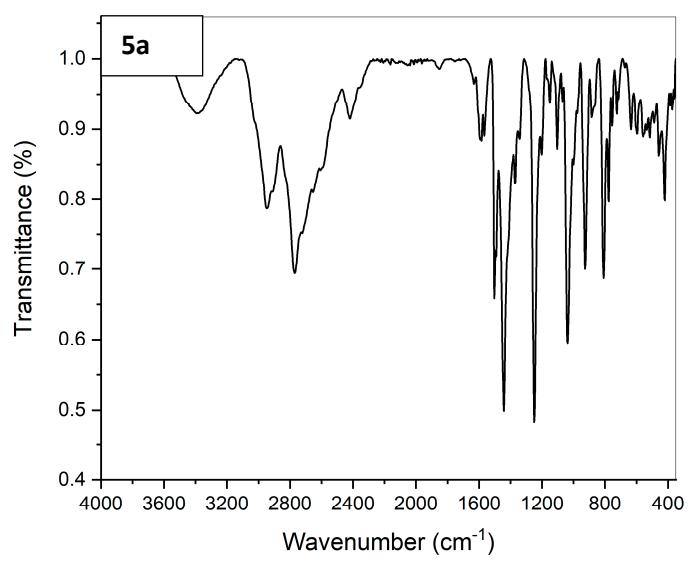

Figure S4. Scheme and X-ray crystallographic structure of **3a·3HCl**.

Slow evaporation of vessels containing a concentrated aqueous solution of **3a·3HCl** yielded white crystals suitable for X-ray diffraction. Analysis of single crystals of the ligand was carried out with an Enraf-Nonius KAPPA CCD single-crystal diffractometer ($\lambda = 0.71073 \text{ \AA}$). CIFS of crystal structures have been deposited with the number 2210255.

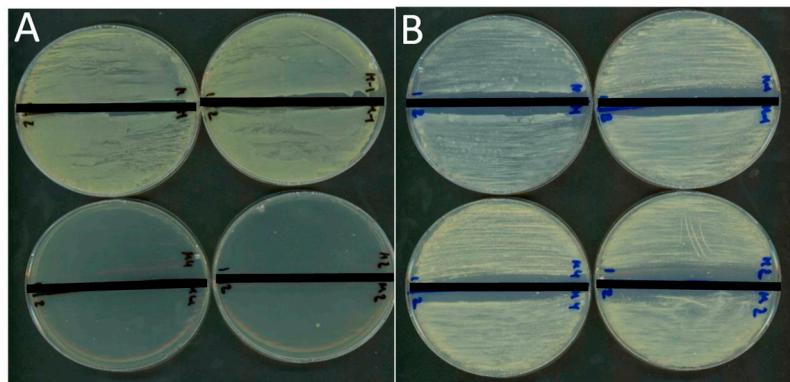

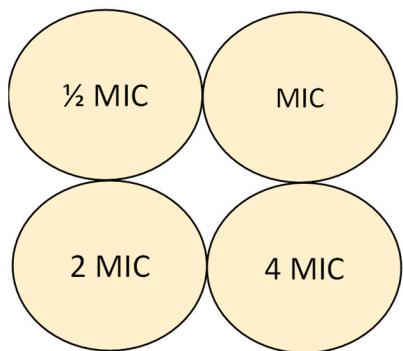

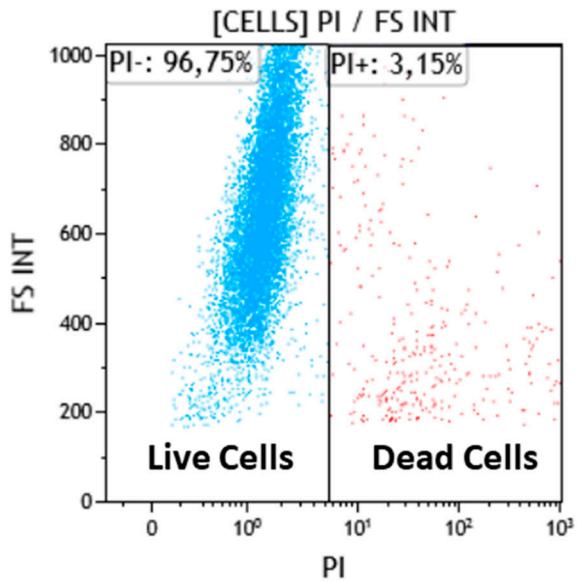

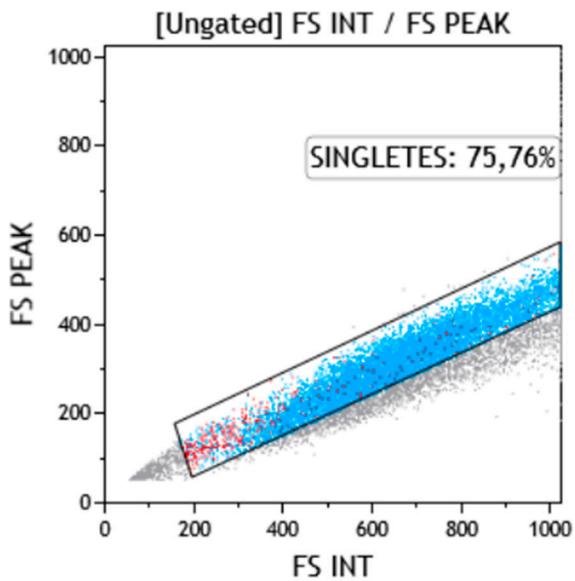

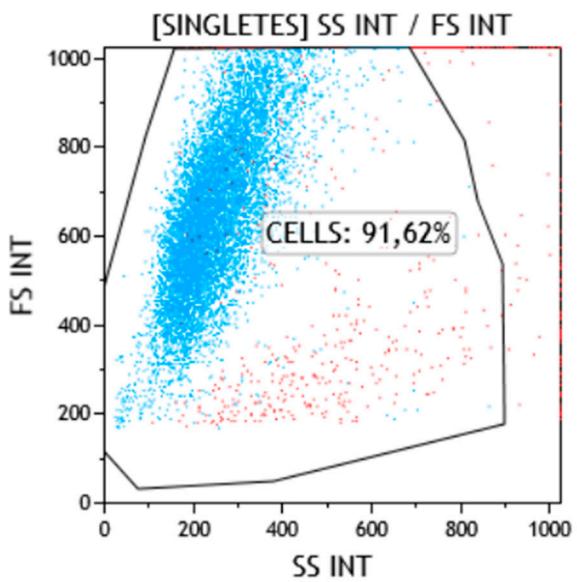

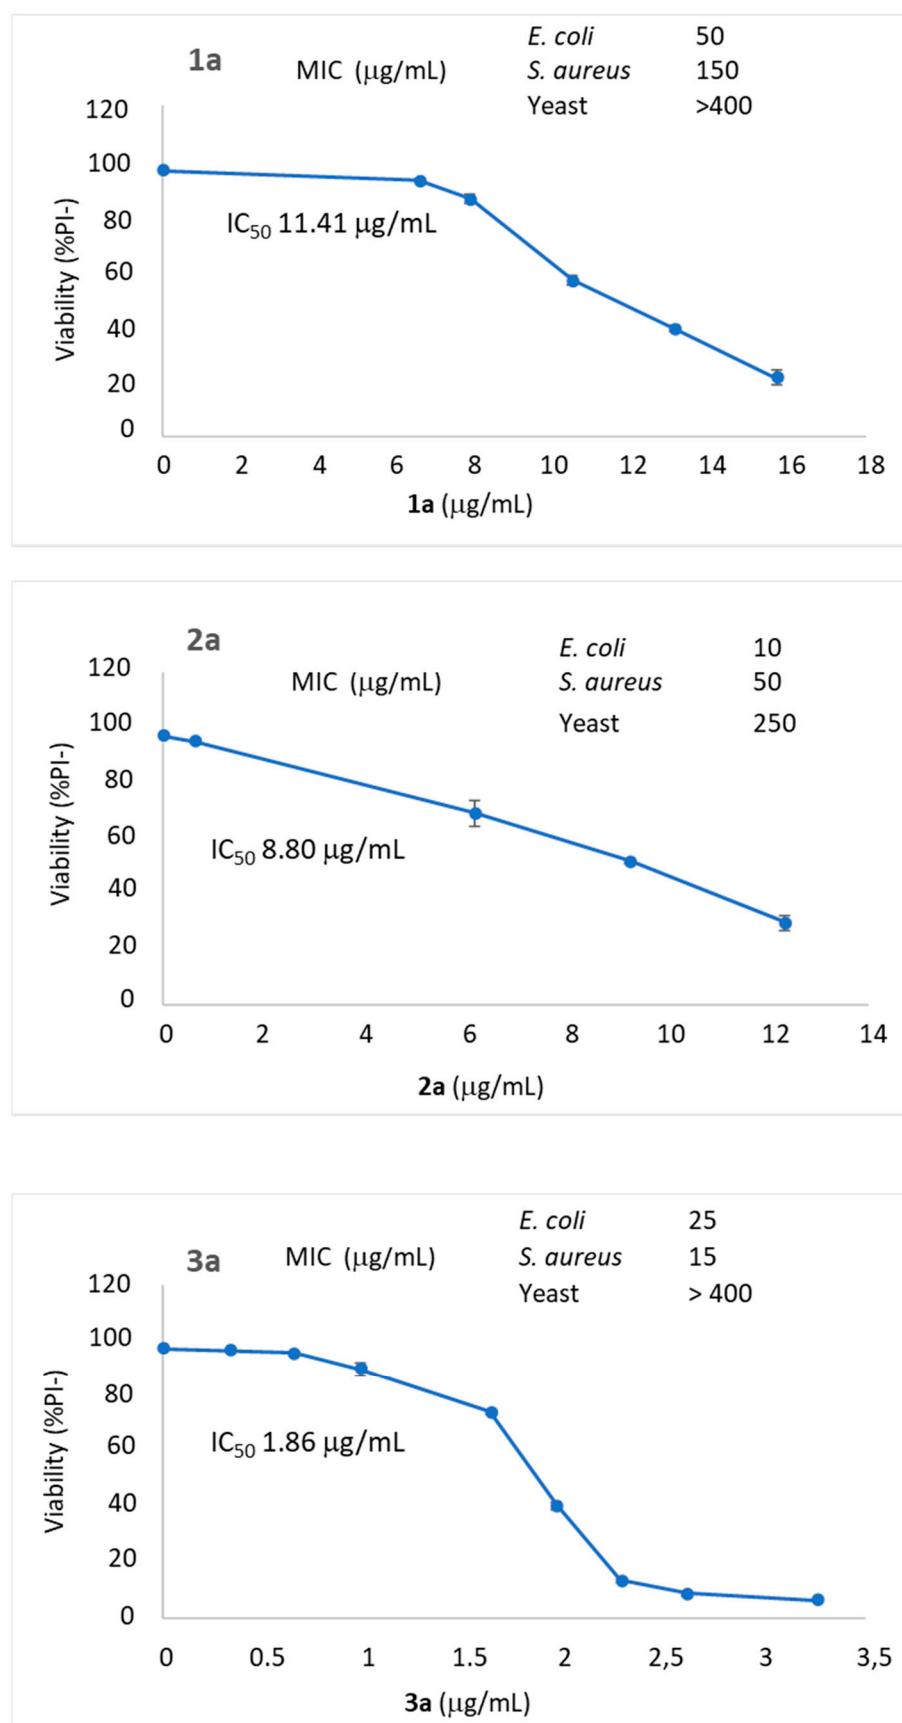

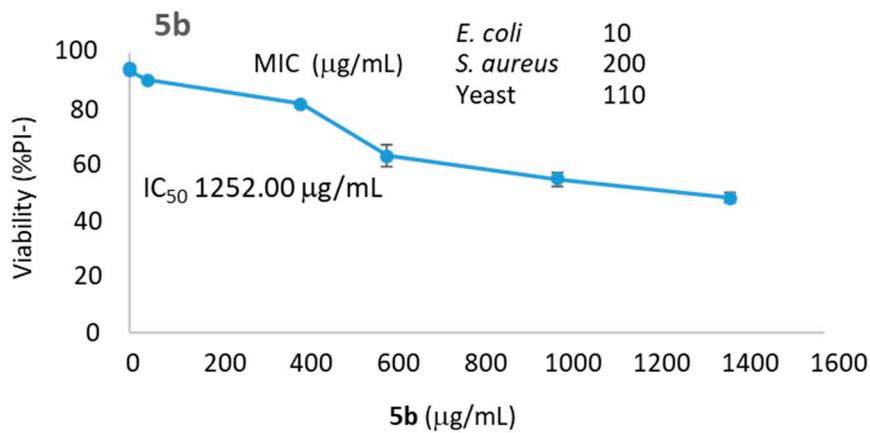

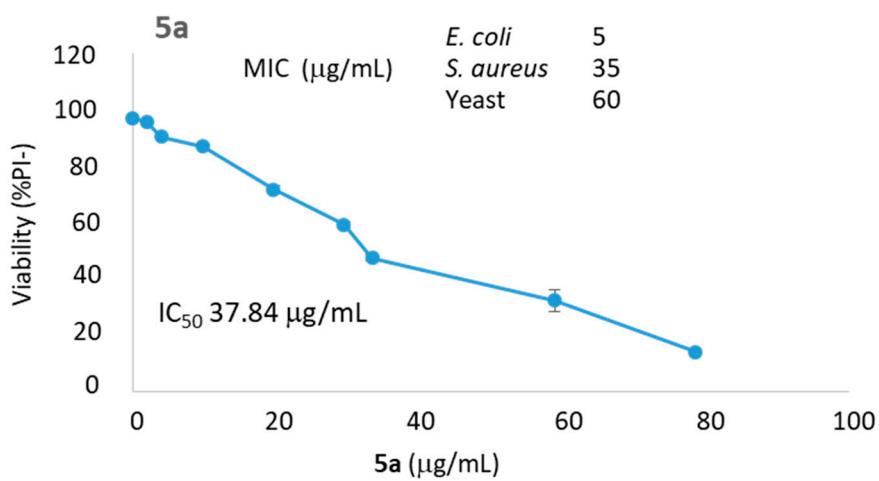

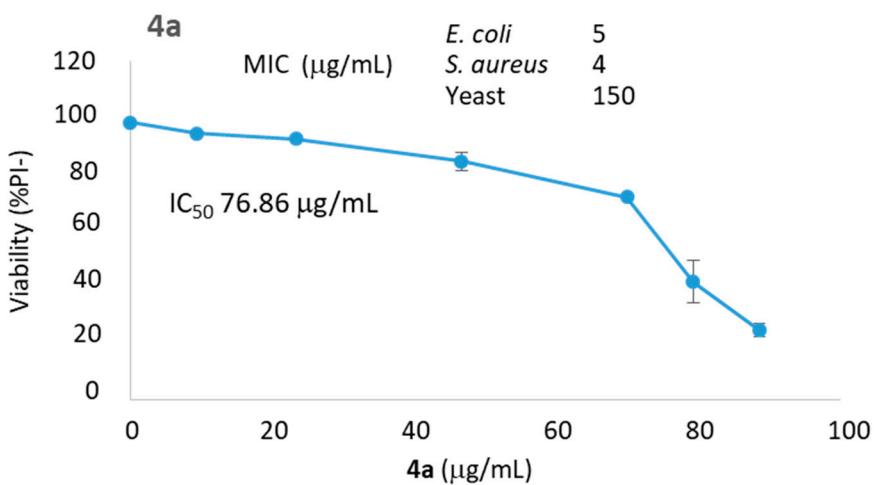

Figure S6. Determination of the minimal microbicidal concentration. On the left, a scheme of the plates used for these experiments is shown. In each sector 30 μ L of a 10-fold dilution of each one of the tubes described in the experimental section were applied. On the right, representative images of the resulting growth in plate are shown. (A) Compound **4a** in *S. aureus*. (B) Compound **4a** in BY4741.
