Figure S1: Relative expression of BCL2 gene. MCF-7 cells were treated with BDG16 at 100, 300, 500 and 1000 µg/mL for 48 h. Statistical analyses were performed by one-way analysis of variance (ANOVA) followed by Bonferroni's post-test, selected pairs. No significant differences were observed on cells treated with BDG16 in comparison with control.
