Figure S1: Schematic of Spark Plasma Sintering (SPS) process, sample geometry for thermal diffusivity, using Laser Flash technique, and power factor measurements.

Figure S2: XRPD patterns showing a close up of the peaks with Miller indices of (006) and (015) for both the samples after SPS process. The relative peak intensity ratio (I_{006} / I_{015}) is a good indicative of texturing within the material, and was estimated as 0.38 for the Hydro-Bi₂Te₃ sample, and 0.19 for the Polyol-Bi₂Te₃ sample.

Figure S3: Rietveld refinement for Hydro-Bi₂Te₃ sample after SPS sintering. Quantification based on the Rietveld refinement yielded about 5.8% Bi₂TeO₅ phase.

Figure S4: Lorenz Number, L_o , estimated for Bi_2Te_3 samples using parabolic band model.
