## Figures

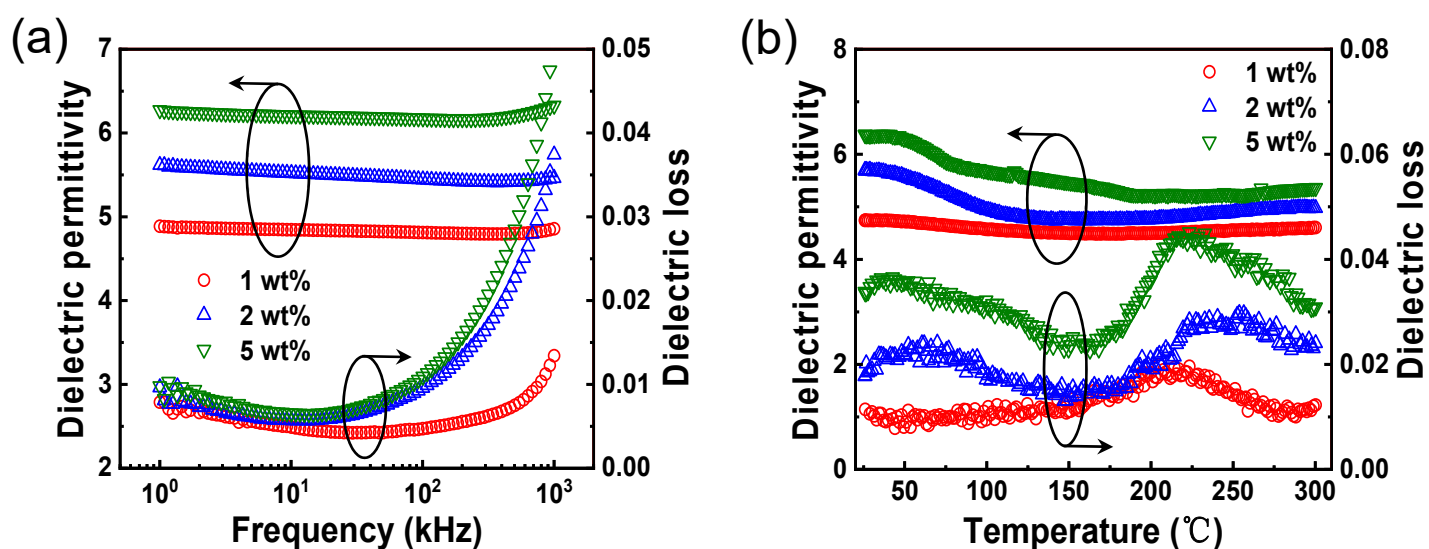

**Figure S1.** SEM image of TiO<sub>2</sub> nanoparticles at low magnification.

**Figure S2.** Characterization of TiO<sub>2</sub>/PI nanocomposites. (a), (b), (c) SEM image and (d), (e), (f) corresponding respectively EDS mapping of TiO<sub>2</sub>/PI nanocomposites with various loading contents of 1, 2, and 5 wt%.

**Figure S3.** XPS spectra of Ti 2p components of TiO<sub>2</sub>/PI nanocomposite.

**Figure S4.** Dielectric properties of solid TiO<sub>2</sub>/PI nanocomposites. Frequency-dependent **(a)** dielectric permittivity and dielectric loss of solid TiO<sub>2</sub>/PI nanocomposites with various loading contents of 1, 2, and 5 wt% at RT. Temperature-dependent **(b)** dielectric permittivity and dielectric loss of solid TiO<sub>2</sub>/PI nanocomposites with various loading contents of 1, 2, and 5 wt% at 1 kHz.

**Figure S5.** (a) TGA at the temperatures of 30 °C to 800 °C and (b) DSC curves at 100 °C to 500 °C of pure PI and TiO<sub>2</sub> nanoparticles/PI nanocomposite with 1 wt% content.

**Figure S6.** Finite element simulation of polarization evolution of TiO<sub>2</sub>/PI nanocomposites with (a) solid and (b) hollow nanofillers.

**Figure S7.** Relationship between nominal charge density and polarizability for PI-based nanocomposites with solid (grey curve) and hollow (red curve) nanoparticles.
