

Supplementary Materials

Figures

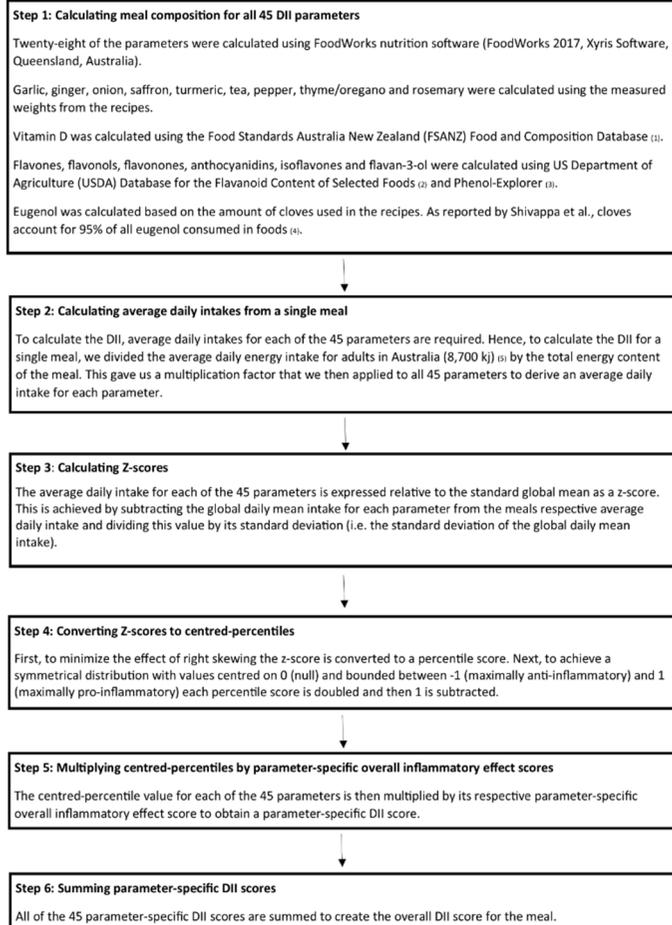

Figure S1. Sequence of steps used to calculate the Dietary Inflammatory Index (DII) for study meals. Adapted from Shivappa et al. (4).

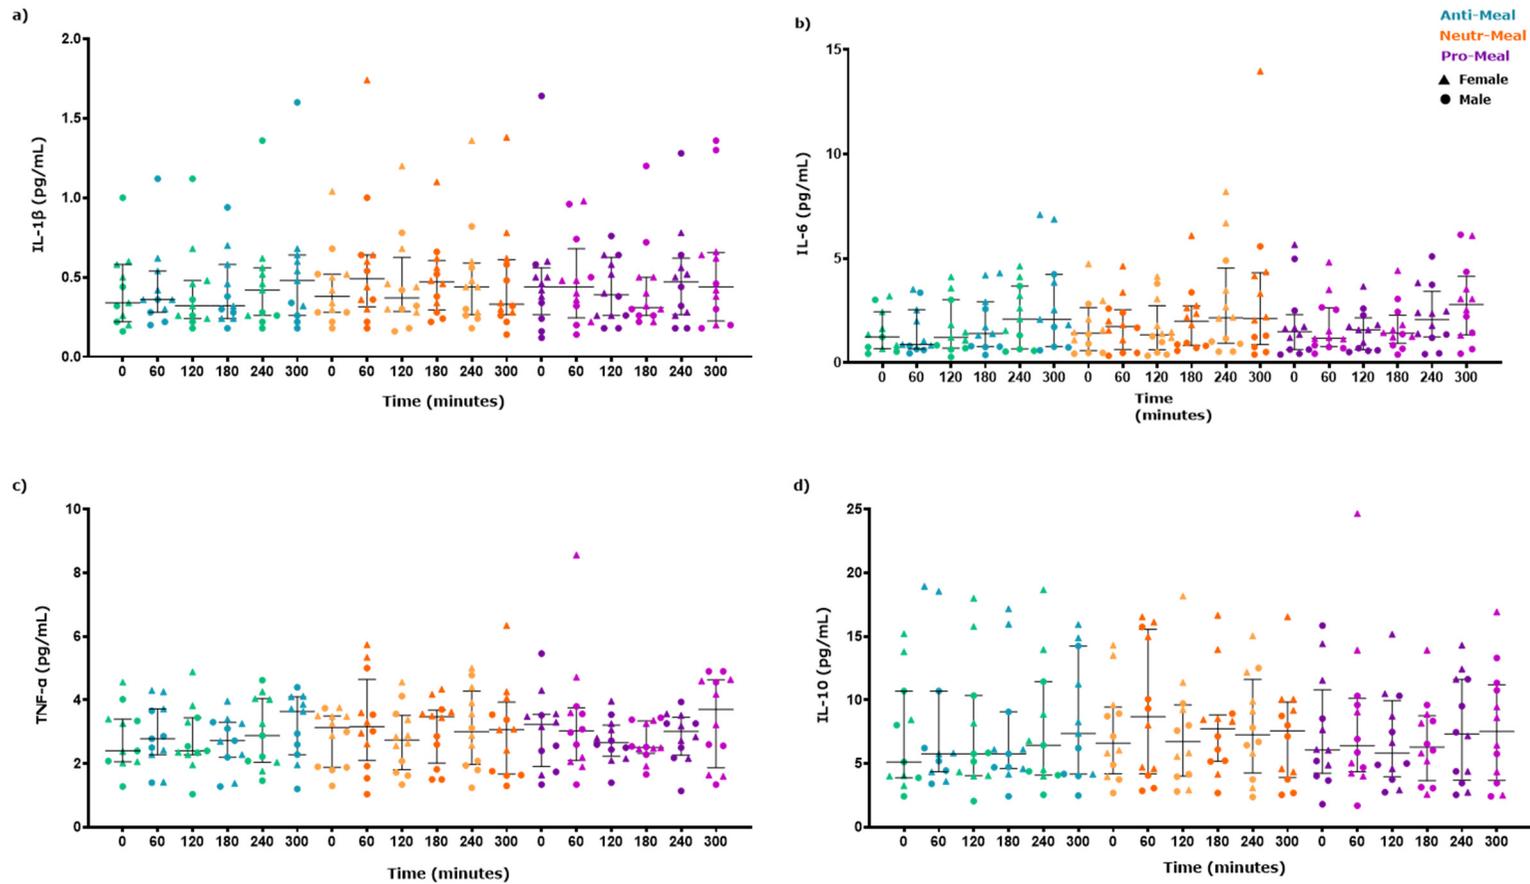

Figure S2. Post-prandial plasma (a) IL-1 β , (b) IL-6, (c) TNF- α , and (d) IL-10 after ingestion of either the Anti-inflammatory meal, Neutral meal or Pro-inflammatory meal. Raw values are presented with median and interquartile range (IQR) for each time point. For all inflammatory markers one participant has been omitted for the Anti-inflammatory meal due to issues with cannulation. Abbreviations: Anti, anti-inflammatory; Neutr, neutral; Pro, pro-inflammatory.

Overall DII Score⁸								+9.36	

¹As calculated and described by Shivappa et al. (4). ²To calculate a DII score for a single meal, we first divided the average daily energy intake for adults in Australia (8,700 kJ) (5) by the total energy content of the meal. This gave us a multiplication factor (3.726) that we then applied to all 45 parameters to derive an 'average daily intake' for each parameter. ³Z-scores were derived by subtracting the global daily mean intake for each parameter from their respective average daily intake and dividing this value by its standard deviation. ⁴To minimize the effect of right skewing the z-score was converted to a percentile score. ⁵To achieve a symmetrical distribution (i.e. centred-percentile) with values centred on 0 (null) and bounded between -1 (maximally anti-inflammatory) and 1 (maximally pro-inflammatory), each percentile score was doubled and then 1 was subtracted. ⁶As calculated and described by Shivappa et al. (4). ⁷The centred-percentile for each parameter was multiplied by its respective overall inflammatory effect score to obtain a DII score for each parameter. ⁸All of the 45 parameter-specific DII scores were summed to create the overall DII score for the meal. Abbreviations: DII, Dietary Inflammatory Index; MUFA, monounsaturated fatty acids; PUFA, polyunsaturated fatty acids.

Overall DII Score⁸								-6.24	

¹As calculated and described by Shivappa et al. (4). ²To calculate a DII score for a single meal, we first divided the average daily energy intake for adults in Australia (8,700 kJ) (5) by the total energy content of the meal. This gave us a multiplication factor (3.726) that we then applied to all 45 parameters to derive an 'average daily intake' for each parameter. ³Z-scores were derived by subtracting the global daily mean intake for each parameter from their respective average daily intake and dividing this value by its standard deviation. ⁴To minimize the effect of right skewing the z-score was converted to a percentile score. ⁵To achieve a symmetrical distribution (i.e. centred-percentile) with values centred on 0 (null) and bounded between -1 (maximally anti-inflammatory) and 1 (maximally pro-inflammatory), each percentile score was doubled and then 1 was subtracted. ⁶As calculated and described by Shivappa et al. (4). ⁷The centred-percentile for each parameter was multiplied by its respective overall inflammatory effect score to obtain a DII score for each parameter. ⁸All of the 45 parameter-specific DII scores were summed to create the overall DII score for the meal. Abbreviations: DII, Dietary Inflammatory Index; MUFA, monounsaturated fatty acids; PUFA, polyunsaturated fatty acids.

Table S4. Postprandial inflammatory and metabolic measures for the Anti-meal, Neutr-meal and Pro-meal stratified by sex.

Outcome ¹	sex	n	Anti-meal	Neutr-meal	Pro-meal	P-value ²
IL-6 iAUC (pg/mL·min)	Female	6	236.7 (52.7 – 476.7)	157.6 (85.8 – 416.8)	120.8 (39.4 – 166.9)	0.311
	Male	5	36.0 (5.1 – 79.7)	58.2 (18.7 – 58.8)	24.6 (3.2 – 142.9)	0.549
IL-1 β iAUC (pg/mL·min)	Female	6	24.0 (4.5 – 28.5)	20.8 (4.0 – 44.6)	3.4 (0.2 – 19.9)	0.311
	Male	5	7.7 (3.3 – 30.4)	12.9 (4.0 – 22.9)	15.7 (3.5 – 20.4)	0.549
TNF- α iAUC (pg/mL·min)	Female	6	130.6 (5.1 – 146.7)	121.5 (0.3 – 288.5)	67.2 (12.8 – 174.1)	0.607
	Male	5	72.0 (7.0 – 123.2)	64.2 (6.0 – 116.9)	72.7 (9.6 – 190.2)	0.165
IL10 iAUC (pg/mL·min)	Female	6	355.0 (102.6 – 792.6)	301.8 (104.1 – 431.4)	130.8 (0 – 484.6)	0.513
	Male	5	135.3 (29.8 – 216.0)	102.6 (51.4 – 301.6)	163.6 (24.3 – 430.2)	0.819
Glucose iAUC (mmol/L·min)	Female	6	24.2 (8.2 – 170.6)	34.0 (21.3 – 75.9)	14.9 (5.1 – 49.0)	0.135
	Male	5	34.0 (4.5– 88.3)	46.3 (23.3 – 63.8)	36.8 (19.2 – 61.8)	1.000
Insulin iAUC (mIU/L·min)	Female	6	1752.0 (1106.4 – 3391.6)	2152.5 (1538.1 – 3629.7)	2932.5 (1500.4 – 3427.6)	0.846
	Male	5	1693.5 (711.6 – 2775.0)	3259.5 (1707.8 – 4531.5)	2440.5 (1303.5 – 3840.8)	0.074
TAG iAUC (mmol/L·min)	Female	6	20.1 (8.8 - 47.0) ^a	58.8 (30.2 - 77.8) ^a	121.9 (43.3 - 230.5) ^b	0.042
	Male	5	31.9 (6.0 - 61.1)	65.1 (53.9 - 76.1)	140.0 (47.6 - 152.5)	0.165
TC iAUC (mmol/L·min)	Female	6	0.32 (0 – 17.52)	0 (0 – 4.42)	0 (0 – 1.77)	0.931
	Male	5	0 (0 – 0)	0.01 (0 – 9.39)	0 (0 – 0.52)	0.174

¹Data are presented as median (Q₁ – Q₃), inflammatory marker, glucose and insulin are analysed from blood plasma and triglycerides and total cholesterol are analysed from blood serum.

²Friedman test followed by pairwise comparisons using Wilcoxon signed-rank test were used to make comparisons between the three test meals. *Unpaired letters ^{ab} indicates a significant difference between meals. Abbreviations: A, anti-inflammatory; N, neutral; P, pro-inflammatory, TAG, triglycerides; TC, total cholesterol; iAUC, incremental area under curve.
