

**SUPPLEMENTARY FIGURE S1.** Morphology of liver, skeletal muscle and visceral adipose tissue (VAT) collected at slaughter. Representative images of A) liver, B) skeletal muscle and C) VAT histology.

CTR: Control diet; WES: Western diet; -: non-supplemented; +: spirulina-supplemented.

**SUPPLEMENTARY TABLE S1.**

Effects of Western diet and spirulina supplementation on the FA composition of liver and skeletal muscle of sows (g/100g total FA)<sup>§</sup>.

CTR: Control diet; WES: Western diet; n.a.: not analysed.

Data are presented as least square mean ± standard error of the mean (SEM). Within a row, least squares means without a common superscript differ ( $p < .05$ ). Statistical significances were set at \* $p < .05$ , \*\* $p < .01$ , \*\*\* $p < .001$ . Trends were defined as # $.05 < p < .10$ . n.s.: not significant.

<sup>§</sup>Only fatty acids (FA) with a proportion  $> 0.2$  g/100 g total FA in at least one of the groups or tissues are displayed.
