Figure S1:

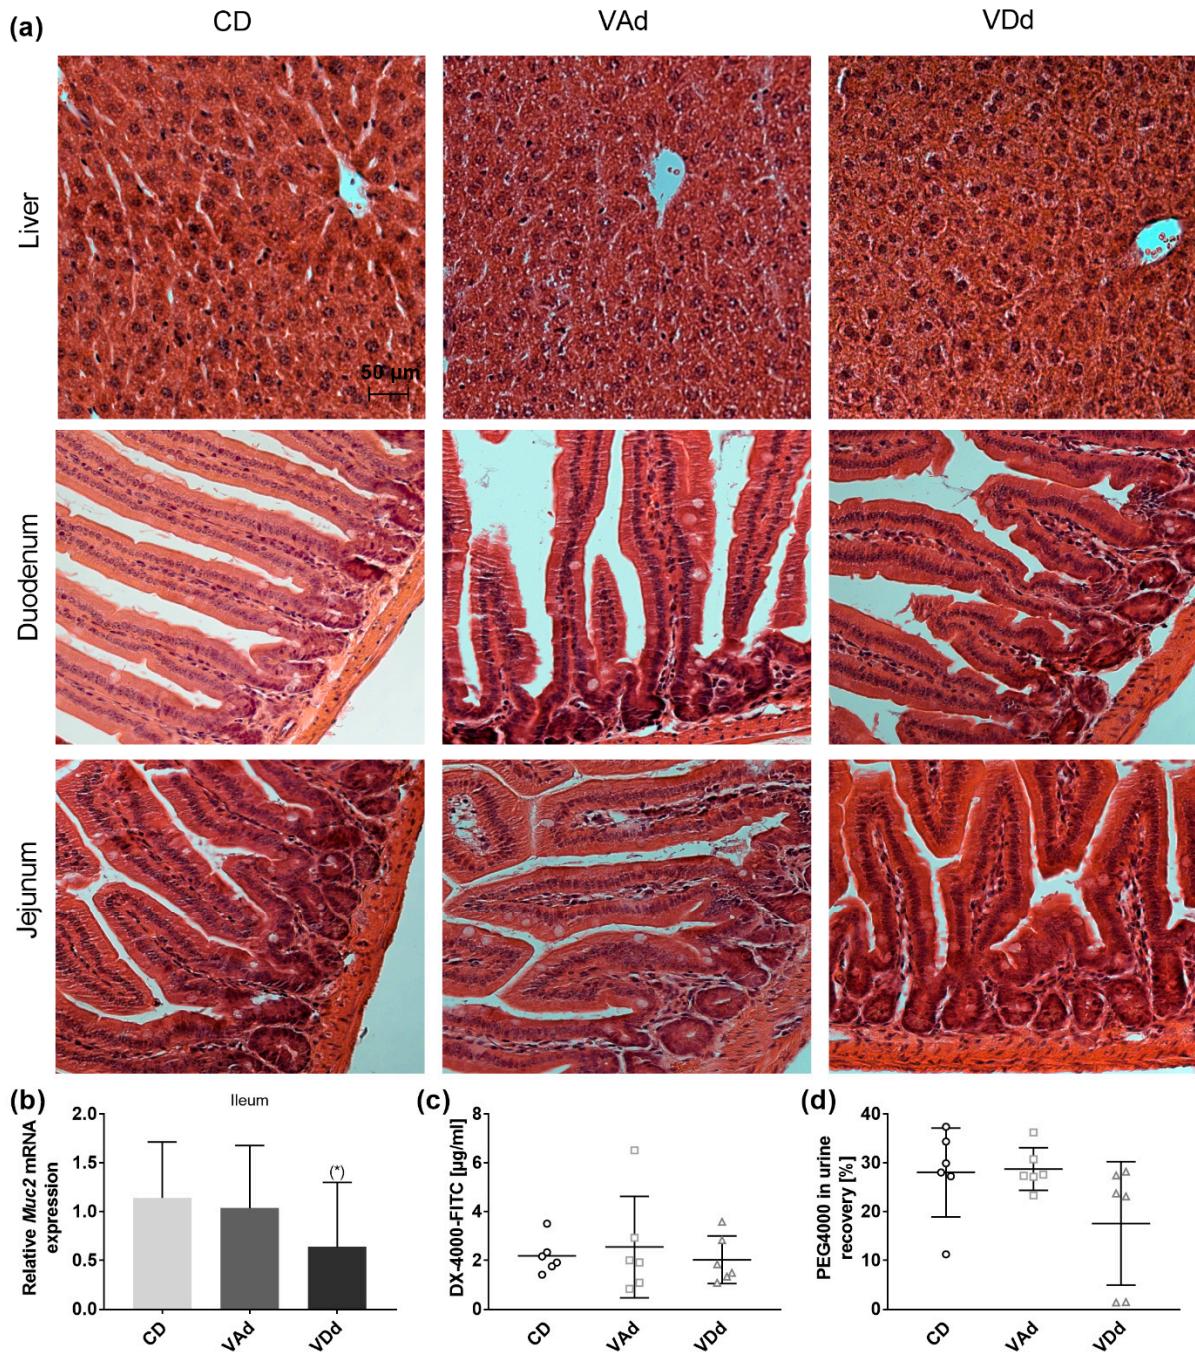

Figure S1. Representative images of HE staining in hepatic, duodenal and jejunal tissue. Scale bar: 50  $\mu\text{m}$  (a). Relative mRNA expression of *Muc2* in the ileum quantified by RT-PCR (b). Intestinal permeability was determined by DX-4000-FITC in the portal venous plasma (c) and by PEG4000 recovery in the urine (d). Data are presented as means +/- standard error of the mean (SEM) ( $n = 8-12$ ). Statistical analysis was performed by one-way ANOVA with Sidak's post-test. Abbreviations: CD, control diet; VAd, vitamin A free diet; Vdd, vitamin D free diet, DX-4000-FITC, fluorescein isothiocyanate-dextran; *Muc2*, mucin 2; PEG, polyethylene glycol.

Figure S2:

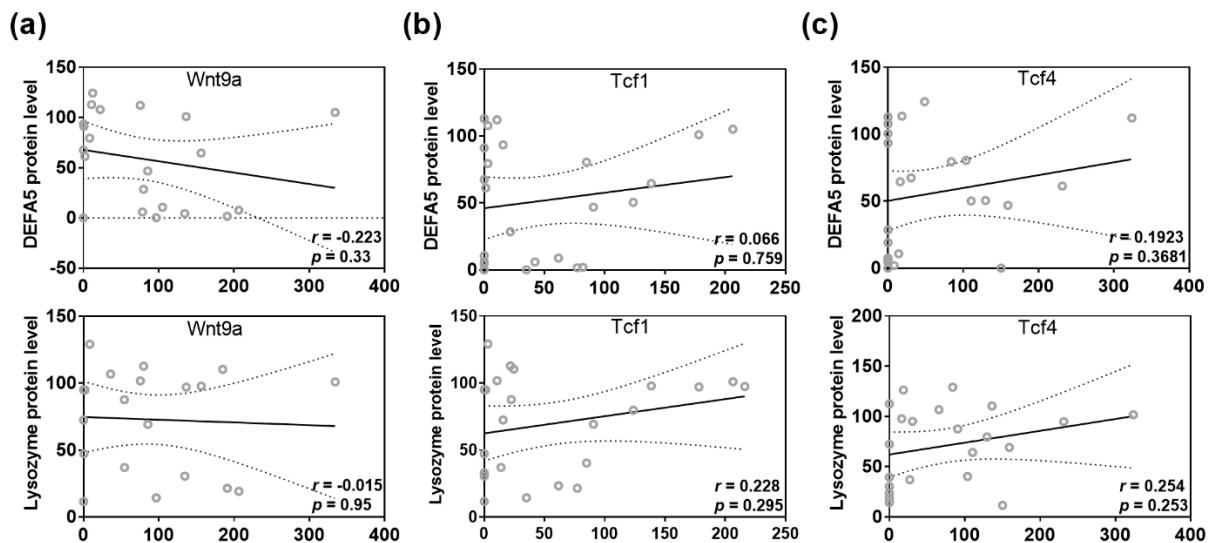

Figure S2. Correlation analysis for DEFA5 or lysozyme protein level and Wnt9a (a), Tcf1 (b), and Tcf4 (c) expression. Statistical analysis was performed by two-tailed Spearman-rank correlation analysis. Correlations in the range of 0.3 to 0.6 or -0.3 to -0.6 were defined as positive or negative correlations. For abbreviations, see Figure 2, and 3.
