

Supplementary Figure S1 Experimental design for DNCB-induced BALB/c mice. Four days before topical application of SLPY, 1% DNCB applied to evoke AD-like skin lesions. After 4 days of 1% DNCB sensitization, mice were challenged with 0.5% DNCB for two days interval for 3 weeks. Two concentration levels (50, 100 mg/kg) of SLPY and dermatop (0.25% (w/w) topically applied daily to treat AD-like skin lesion and compare against the control and AD groups.

Supplementary Table S1 Primer sequence of the respective gene used in qRT-PCR analysis

Gene	Primer	Sequence
GAPDH	Forward	GCA CAG TCA AGG CCG AGA AT
	Reverse	GCC TTC TCC ATG GTG GTG AA
TNF-α	Forward	AAG CCT GTA GCC CAC GTC GT
	Reverse	GGC ACC ACT AGT TGG TTG TC
