

## Typical Nutritional Data RiBran 300

*nutrition by nature®*

Typical Nutritional Data			
Macronutrients		Micronutrients	
Proteins (g / 100g) (AOAC 991.20.1)	14	Choline (mg / 100g) (J Lipid Res 26-1985)	105
Fat (g / 100g) (AOAC 960.39)	21	Inositol (mg / 100g) (Food Chem 87-2004)	1500
Saturated Fatty Acids (g / 100g) (AOCS Ce 1e-91)	4	gamma-Oryzanol (mg / 100g) (in house) (UV-Vis)	245
Total Carbohydrate (g / 100g) (Calculation)	49	Vitamins	
Available Carbohydrate (g / 100g) (Calculation)	24	Carotenoids	
Ash (g / 100g) (AOAC 945.46)	10	Beta carotene (iu / 100g) (CIFSTJ 1982 15:16)	ND
Moisture (g / 100g) (AACC 44-40)	6	Lutein (mcg / 100g) (in house) (HPLC H114)	100.0
Total Dietary Fiber (g / 100g) (AOAC 991.43)	25	Zeaxanthin (mcg / 100g) (USP / NF)	39.0
Soluble Fiber (g / 100g) (AOAC 991.43)	2	Vitamin B Complex (mg / 100g)	
Energy (kcal / 100g) (Calculation)	330.5	Vitamin B1 (Thiamine) (AOAC 942.23)	2.7
		Vitamin B2 (Riboflavin) (AOAC 970.65)	0.3
		Vitamin B3 (Niacin) (AOAC 44.13)	47.0
Minerals		Vitamin E Complex (HPLC) (AACC 86-06)	
Sodium (mg / 100g) (ICP) (AOAC 984.27)	8	Tocopherols (ppm)	12
Potassium (mg / 100g) (ICP) (AOAC 984.27)	1570	Tocotrienols (ppm) (sum of alpha beta gamma delta)	13
Calcium (mg / 100g) (ICP) (AOAC 984.27)	40	Total Sugars (g / 100g) (AOAC 980.13)	8.1
Magnesium (mg / 100g) (ICP) (AOAC 984.27)	730	Other Analysis	
Phosphorus (mg / 100g) (ICP) (AOAC 984.27)	1590	Appearance (in house)	Extra Fine Granule
Iron (mg / 100g) (ICP) (AOAC 984.27)	8	Color (in house)	Tan
Phytosterols		Flavor (in house)	Nutty
Beta Sitosterol (mg / 100g) (HPLC) (FAO JECFA)	167	Bulk Density (ASTMD 1895B, + / - 10%)	~0.49 g/cm3
Stigmasterol (mg / 100g) (HPLC) (FAO JECFA)	63	Particle Size Distribution (laser scattering analyzer)	Minimum
Campesterol (mg / 100g) (HPLC) (FAO JECFA)	96	through 850 micron (20 mesh)	95%
Other Sterols (mg / 100g) (HPLC) (FAO JECFA)	15	through 425 micron (40 mesh)	90%
Total Phytosterols (mg / 100g) (HPLC) (FAO JECFA)	340	through 250 micron (60 mesh)	70%
		through 180 micron (80 mesh)	55%
		through 150 micron (100 mesh)	50%

**Supplemental Figure S1.** Spec sheet for the heat-stabilized rice bran (RiBran 300) used in this study.

**Supplemental Figure S2.** Child (n=27) baseline anthropometric z-scores for weight-for-age (WAZ), weight-for-length (WLZ), and length-for-age (LAZ). Scatter plots show the three z-score measures based on child baseline age in months and by sex (female/male).

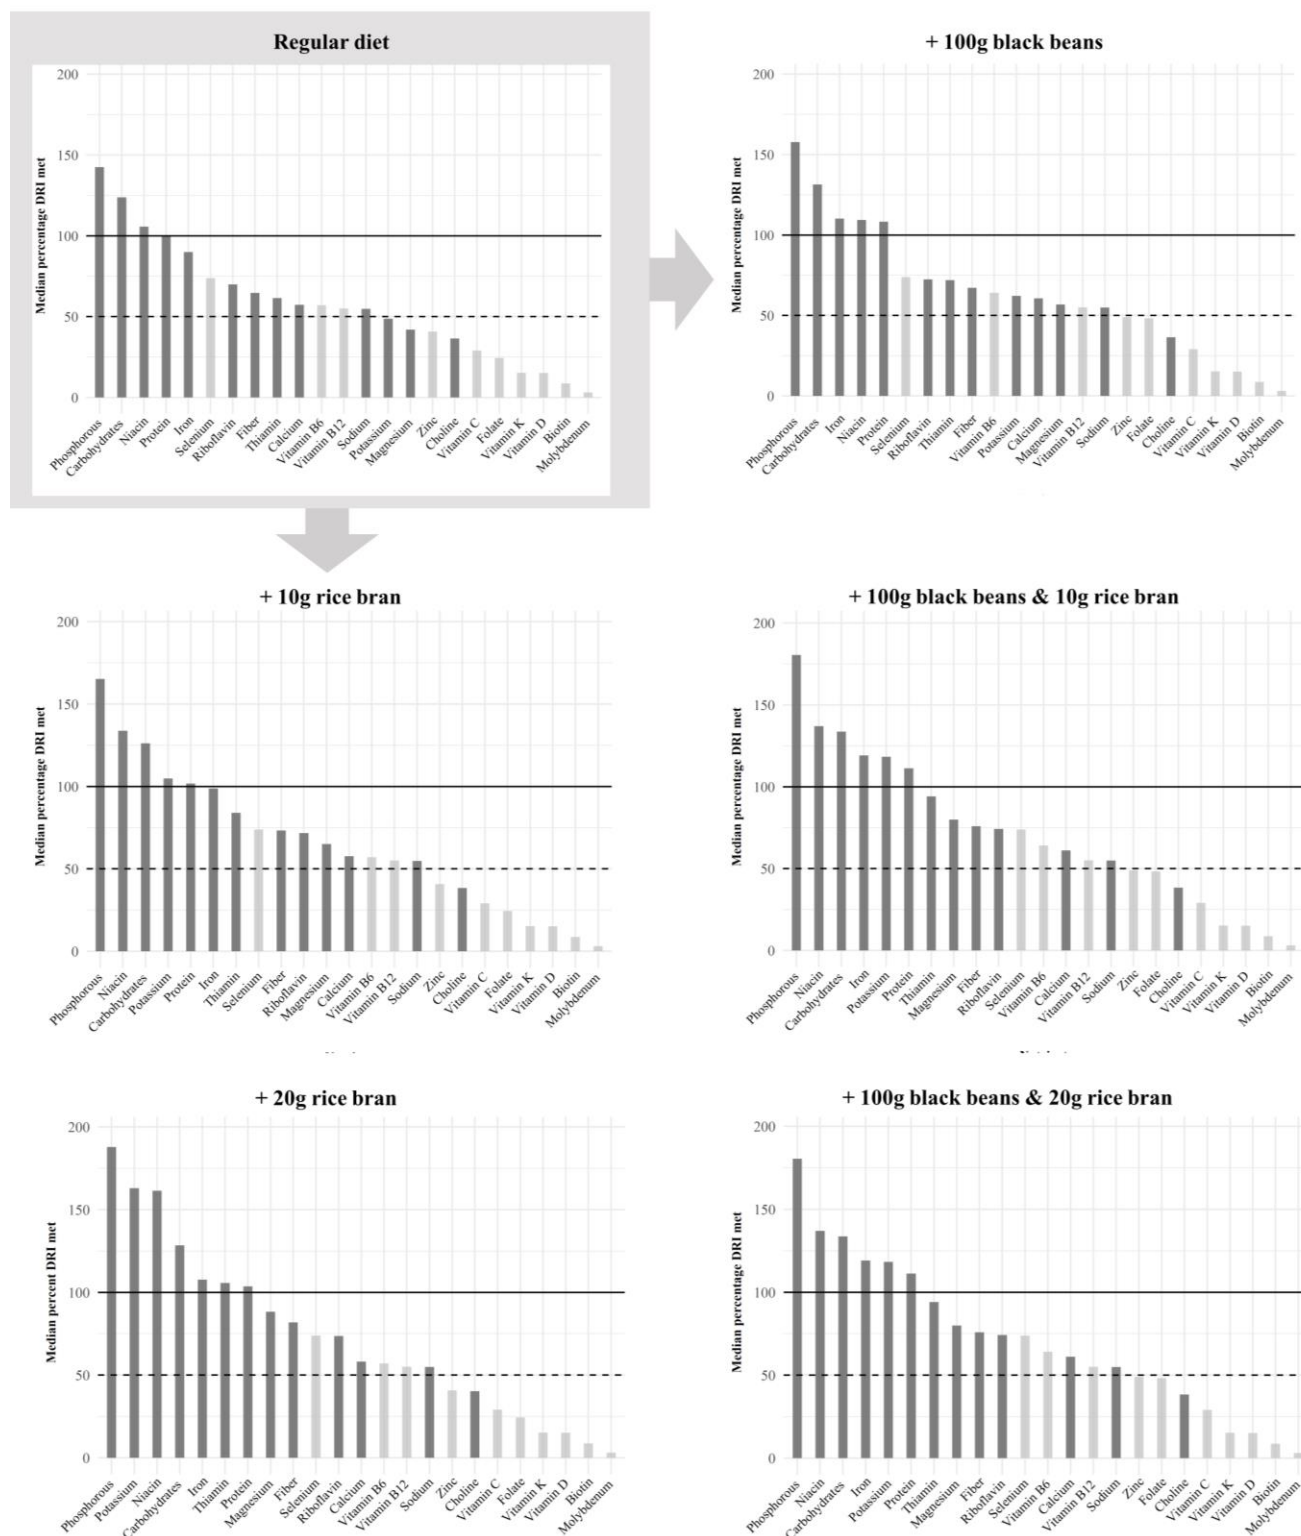

**Supplemental figure S3.** Healthy child (n=27) baseline food frequency questionnaire (FFQ) results for 12 of the 17 food groups included in the FFQ and split by child age (6-12 months / >12 months). mo. = months. Bars are colored by percentage of children consuming each food group at least once per week (darkest color), once per day (middle color), and more than once per day (lightest color).

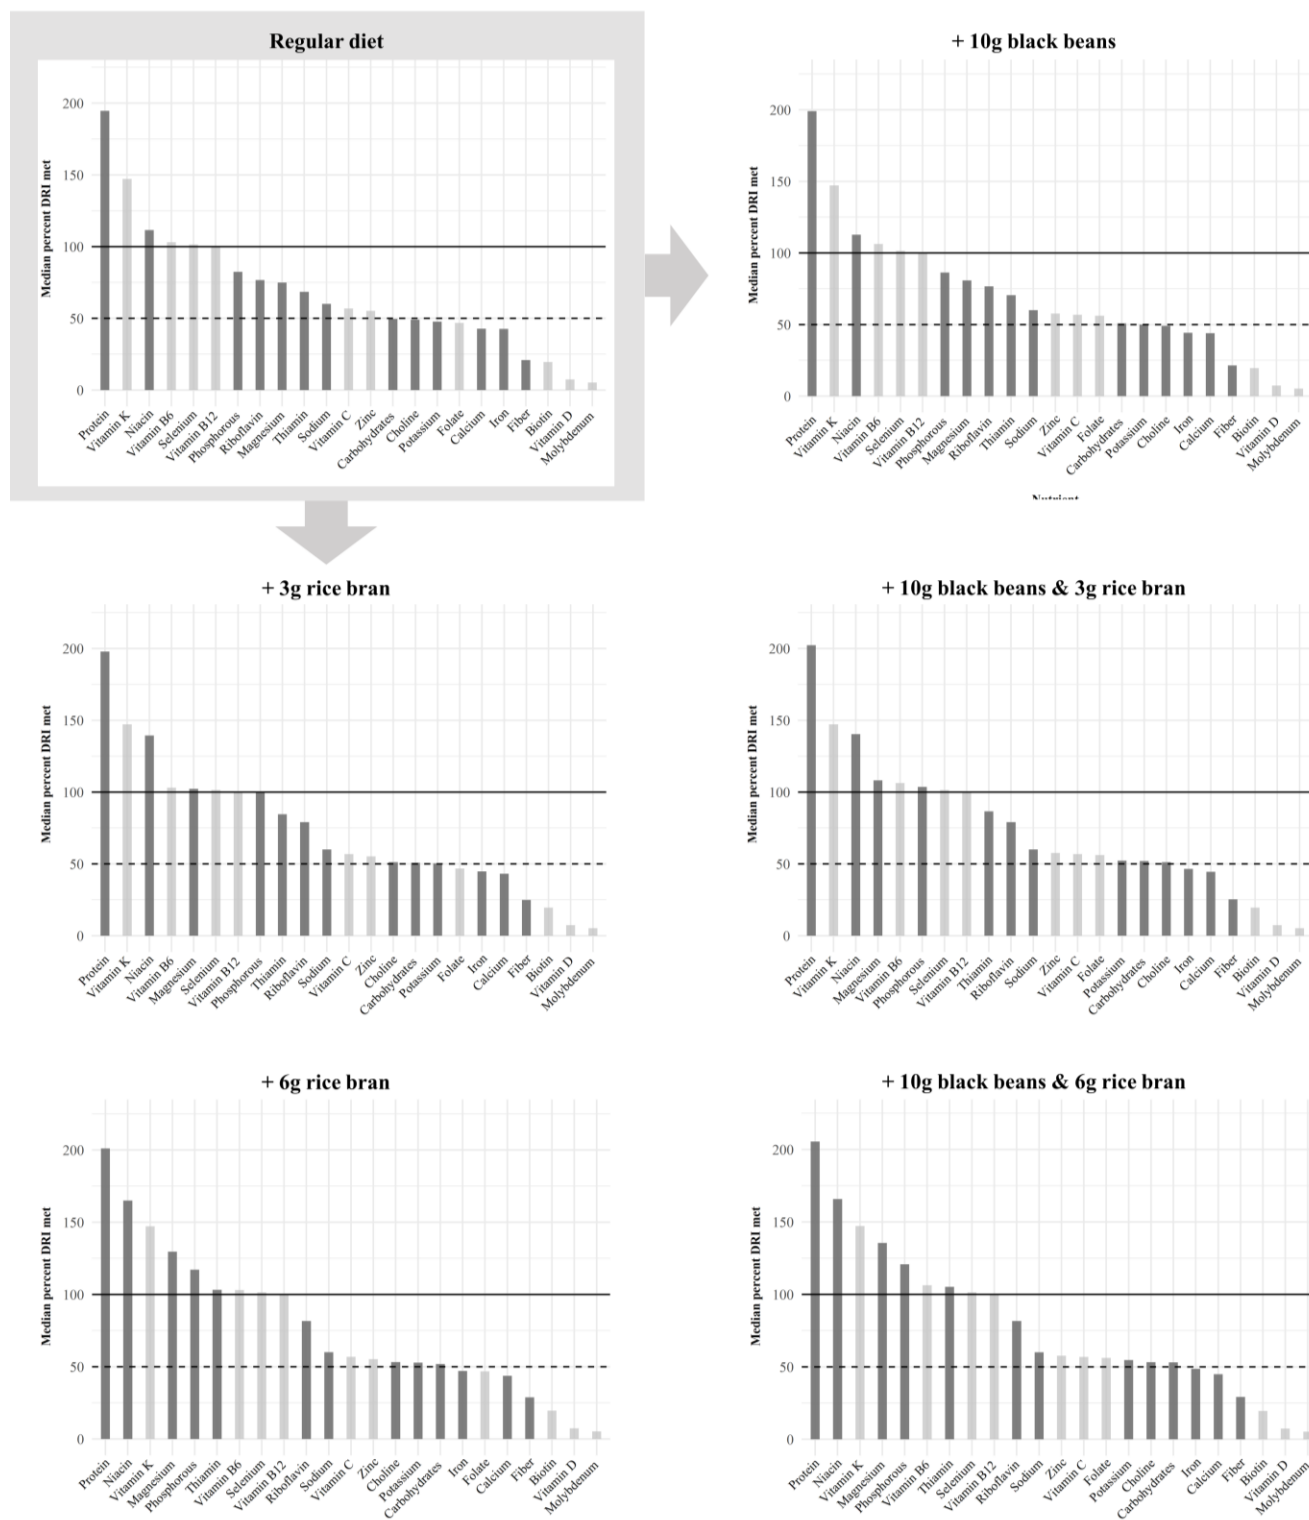

**Supplemental figure S4.** Maternal (n=27) and child (n=23) average percent of dietary reference intakes (DRIs) achieved for protein (g), carbohydrates (g), and fiber without dietary intervention (regular diet) and modelled with the addition of rice bran, black beans, and rice bran plus black beans. Dots represent individuals. As there is no DRI for fiber for children <12 months old, fiber values for children are for those aged 13-24 months only.

**Supplemental figure S5.** Maternal (n=27) and child (n=23) average kilocalorie (kcal) intake between baseline and endline dietary recalls and modelled with the addition of rice bran, black beans, and rice bran plus black beans. Dots represent individuals.

**Supplemental figure S6.** Maternal (n=27) median percent of the nutrient dietary reference intakes (DRIs) achieved without dietary intervention (regular diet) and modelled with the addition of rice bran (10g and 20g), black beans (100g), and rice bran with black beans (110g and 120g). Nutrients are included on the x-axis and ordered by highest to lowest percentage for each image. Bars highlighted in dark gray are nutrients to which rice bran contributes.

**Supplemental figure S7.** Child (n=23) median percent of the nutrient dietary reference intakes (DRIs) achieved without dietary intervention (regular diet) and modelled with the addition of daily rice bran (3g and 6g), black beans (10g), and rice bran with black beans (13g and 16g). Nutrients are included on the x-axis and ordered by highest to lowest percentage for each image. Bars highlighted in dark gray are nutrients to which rice bran contributes.
