

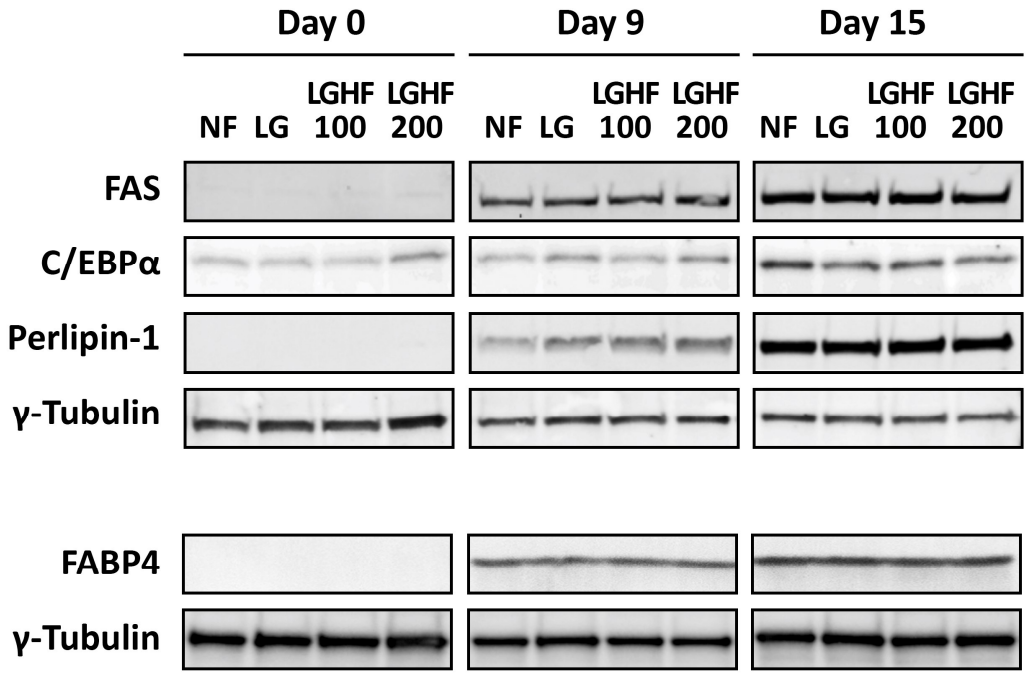

Figure S2. Immunoblot analysis of adipogenic factors in differentiating ASCs on day 0, 9 and 15 after start of differentiation, subjected or not to prior fasting and refeeding regimens. γ-Tubulin was used as internal reference. The presented blots are representative for three independent immunoblots. NF: non-fasted; LG: low glucose; LGHF100/200: low glucose/high fatty acid (100/200 μM oleic acid).
