Supplementary Figure S1

Supplementary Figure S1: Changes in taxa between diets differing in iron amount in the lung. (A-C) OTUs enriched in FeAS diet based on linear discriminant analysis scores (LDA) taking into account the effect size (LEfSe), (D) the family *Bacteroidaceae* and (E) the genus *Bacteroides* were enriched in the lung microbiome of mice fed FeAS-supplemented diet compared to the iron-deficient and pellet diets.
