Figure S2: Overlap of differentially expressed genes (DEGs) among male and female CNP responses and baseline sex differences. Venn diagram showing the overlap among DEGs identified in CNP-treated males versus male controls (Group A: CNP10_M vs. CNP0_M), CNP-treated females versus female controls (Group B: CNP10_F vs. CNP0_F), and control males versus control females (Group C: CNP0_M vs. CNP0_F). Numbers represent the number of genes unique to each comparison and shared among comparisons. This analysis was used to determine the extent to which CNP-responsive DEGs in males and females overlapped with baseline sex-differential genes.
