

Figure S5: injection assay: candidate transcriptional modulation between 5 and 24 h post challenge.

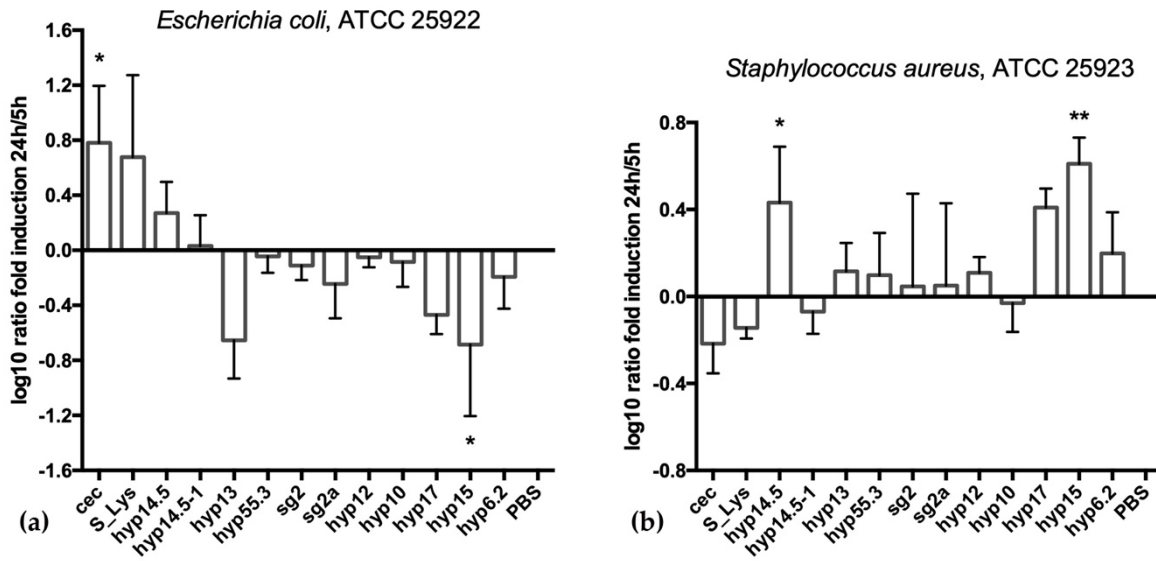

Figure S5: Injection assay: (a) log₁₀ of fold induction (EC-treated/PBS-treated mosquitoes) of each candidate between 5 and 24 h after challenge; (b) log₁₀ of fold induction (SA-treated/PBS-treated mosquitoes) of each candidate between 5 and 24 h after challenge. *: $p < 0.05$; **: $p < 0.01$.
