

Supplementary materials

Supplementary Table S1. *Bartonella* and canine vector-borne disease (CVBD) testing results for dogs and humans clinical samples used for comparative ELISA testing in this study. POS= positive; NEG= negative; NT= not tested; n/a = not available; *Bh* = *B. henselae*; *Bvb* T_I= *B. vinsonii* subsp. *berkhoffii* (*Bvb*) genotype I; *Bvb* T_{II}= *Bvb* genotype II; *Bvb* T_{III}= *Bvb* genotype III; *Rr* = *Rickettsia rickettsii*; *Bart.* = *Bartonella* spp., ddPCR= droplet digital PCR; IFA= Immunofluorescent antibody assay; CVBD PCR = PCR testing for *Babesia*, *Ehrlichia*, *Anaplasma*, *Rickettsia*, hemotropic *Mycoplasma* and *Leishmania* spp.; CVBD serology = IFA testing for *Rickettsia rickettsii*, *Ehrlichia canis*, *Babesia canis*, and *Babesia gibsoni* plus ELISA testing (SNAP 4Dx PLUS ELISA, IDEXX Laboratories, Westbrook, Maine) for *Anaplasma phagocytophilum*, *Anaplasma platys*, *Borrelia burgdorferi*, *Ehrlichia canis*, and *Ehrlichia ewingii*. Detailed methods for the *Bartonella* PCR, BAPGM (*Bartonella* Alpha Proteobacteria Growth Medium) enrichment blood culture, and the IFA serological panel used to test these study participants have been published previously [14,21]. *Bartonella* blood droplet digital PCR (ddPCR) was performed as described previously [43]. Of the four dogs positive for CVBD by serology, one dog was seropositive to *Babesia canis* (IFA titer 1:1024) and *Babesia gibsoni* (IFA titer 1:4096), one dog was seropositive to *Ehrlichia canis* (IFA titer 1:2048), one dog was seropositive to *Babesia canis* (IFA titer 1:2048) and *Babesia gibsoni* (IFA titer 1:2048), and the remaining dog was seropositive to *Babesia canis* (IFA titer 1:64). Two (2*) of these four dogs were also *R. rickettsii* IFA positive.

Testing	Testing Results	Testing Results for Dogs and Humans Groups			
		Group I (<i>Bartonella</i> infected dogs; n=36)	Group II (control dogs; n=34)	Group III (<i>Bartonella</i> infected humans; n=18)	Group IV (control humans; n=18)

Supplementary Table S2. The full list of linear B-cell epitopes of *Bartonella henselae* Pap31. Six algorithms (AAP, ABCPred, BCPred, BepiPred 2.0, FBCPred, and SVMTriP) were employed to predict linear B-cell epitopes of *B. henselae* Pap31. The antigenicity of predicted linear B-cell epitopes was determined by VaxiJen 2.0.
