

Figure S2. RNAscope In Situ Hybridization negative controls. Vaginal explants were cultured for 1 day either (a) unchallenged or (b) exposed to 10^5 pfu of ZIKV PRABC59 for 2 h. Representative images of sections processed for RNAscope analysis in (a) the presence or (b) absence of probe but with nuclei stained with haematoxylin (blue). Blue bar = 200 µm. SSE: stratified squamous epithelium; LP: lamina propria.
