

Figure S1. The effect of EtOH/H₂O vehicle (70:30 v/v) on the viability of HepG2 cells. MTT assay on untreated cells (–) or exposed to different dilutions of EtOH/H₂O (70:30 v/v) for 24h. The amount of EtOH/H₂O (70:30 v/v) applied corresponds exactly to that used in POE cell treatment. Data were reported as mean \pm SD of three independent experiments.
