

Supporting Information

Figure S1. Effect of timolol and brimonidine eye drops on baseline IOP in rats. In each rat (n = 3; 6 eyes) eye drops (10 μ l) were instilled in each eye. SE bars are shown. *** p<0.001 (15'-30') ** p<0.01 (60') vs saline control.

Figure S2. Cell viability (MTT assay) of HSF treated with increasing concentrations of MID for 24 and 48 h in complete culture medium (2% FCS). Data are expressed as means \pm S.D. of three independent experiments, each performed in triplicate.
