Supplementary Figure S1

Supplementary Figure S1. Establishment of LGMN overexpressing gastric cancer cell lines. A. Western blot analysis of LGMN expression levels in 7 gastric cancer cell lines. B. ELISA detection of LGMN expression levels in the supernatant of 7 gastric cancer cell line cultures. C. Lentiviral vectors were used to upregulate LGMN expression in AGS and BGC823 cells, establishing LGMN overexpressing cell lines (AGS-L and BGC823-L). D. ELISA detection of LGMN expression levels in the supernatant of AGS-L and BGC823-L cells as well as control cells (Mock). ***P<0.001; **P<0.01.
