

Table S3. Indication for study medication.

Treatment indication	Study cohort n=219
	n (%)
Acute pain	82 (37.4)
Chronic and/or inflammatory pain (> 14d)	36 (16.4)
Premature labor/cervical insufficiency	36 (16.4)
Fever/flu	13 (5.9)
Polyhydramnios	11 (5.0)
Combinations of the above	15 (6.8)
Other	2 (0.9)
Indication not available	24 (11.0)

When the study drug was administered for pain, it was determined that an exposure of more than 14 days was considered chronic use.
