Supplementary Figure S1.

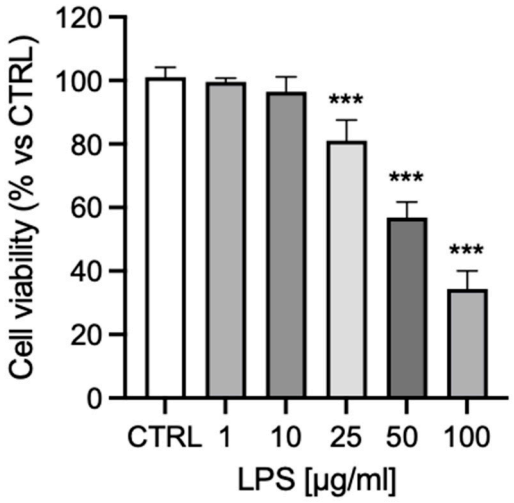

Figure S1. LPS reduce the viability of A549 cells. A549 cells were treated with increasing concentration of LPS ranging from 1 to 100 µg/ml for 24 h. Each bar represents means ± SD from three independent experiments performed in triplicate. Statistical analysis was performed by one way ANOVA followed by Dunnet's multiple comparisons test. ***$p < 0.005$ compared to untreated cells (CTRL).
