

Rabbit Model

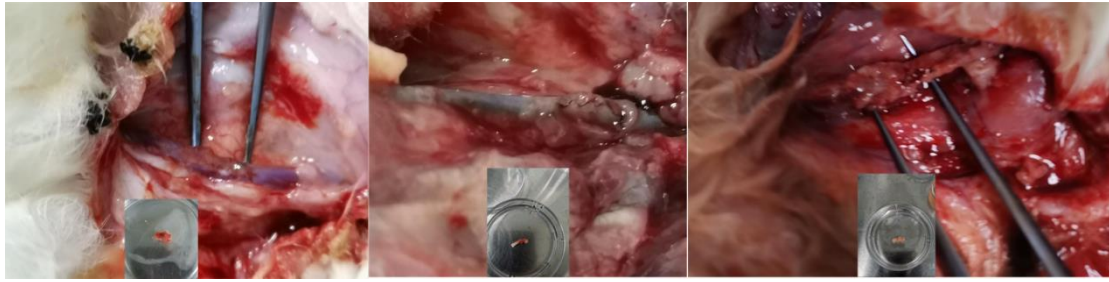

Figure S1. Photos of PU, PU/LC20%, PU/LC20%/pDNA vascular patch.

After implantation of PU, PU/LC20%, PU/LC20%/pDNA vascular patch in the carotid artery of rabbits, the wounds of the control group and the experimental group were not inflamed and healed in a short time. All of them had returned to normal activities and diet, and obvious pathological change even death did not appear in the long-term life process.

Figure S2. Photos of the surgical procedure.
