

Table S1: Cytokines profiling measured using LEGEND plex™ Mouse Inflammation Panel (13-plex) kit after injections with isRNA + liposomes of different structures. The data represent mean \pm standard deviation (SD) calculated from measurements from at least three mice. Statistically significant differences between experimental groups and the Control group are indicated by asterisk (** = P value \leq 0.0001, ** = P value $<$ 0.001, * = P value $<$ 0.05); ordinary Two-way ANOVA, Dunnett's multiple comparisons test.

A**B**

C

Supplementary Figure S1. Cytokines levels in human PBMCs primary cell culture after the transfection of isRNA/liposomes. The levels of IFN- α (A) and TNF- α (B) 6 and 24 h after transfection, the levels IL-6 (C) 16 and 24 h after transfection were measured by ELISA. The data represent mean \pm standard deviation (SD). Statistically significant differences between samples treated with isRNA/liposomes and the samples treated with only liposomes are indicated by asterisk (* = P value <0.05, ** = P value<0.01, *** = P value <0.001); ordinary two-way ANOVA, Dunnett's multiple comparisons test.

RLS40**B16**

Supplementary Figure S2. Representative flow histograms of Cy5.5-isRNA and its complexes with liposomes accumulation in B16 and RLS40 cells. The accumulation was measured 4 h after transfection of Cy5.5-isRNA mediated by liposomes. Red – untreated cells, Green – cells incubated with -siRNA, Yellow – cells incubated with Cy5.5-isRNA/P2000 complexes, Blue – cells incubated with Cy5.5-isRNA/2X3-DOPE complexes.
