**Figure S1. Study flow chart**

\*Notes: Sac/val received approval for the treatment of chronic heart failure (HF) with reduced ejection fraction (HFrEF), specifically in cases where the left ventricular ejection fraction (LVEF) is  $\leq 40\%$ . Therefore, the prescription of sac/val inherently implies the presence of HF. Furthermore, sac/val was introduced to the Italian market in May 2017. Given that our recruitment period commenced on January 1, 2017, all subjects within our study cohort initiated sac/val treatment, rendering the application of a wash-out period unnecessary for these reasons.
