Supplementary Table S1. A list of phosphorylated peptides of TcPolβ by protein kinases TcPKC2 and TcWee570. Both protein kinases can phosphorylate several Ser/Thr and Tyr residues. In the combined sites in the Excel sheet, column F represents phosphorylation sites on TcPolβ by TcPKC2, and column G represents phosphorylation by TcWee570. The number 1 means that the protein kinase phosphorylates the site, while the number 0 means that the kinase does not phosphorylate that site. Column E shows the identified peptide, and the lowercase letter indicates the phosphorylated residue.
