

Supplementary Figure S1: Manhattan plots showing SNP markers associated with efficient secondary traits A, A') grain number ; B, B') Biomass ; C, C') number of fertile spikes per plant and D, D') ground cover at Sidi El Aidi and Taoujdate Stations respectively

Supplementary Figure S2: Population structure (A) plot of the Bayesian information criterion (BIC) for each population number from 1 to 10 using a K means cluster, (B) biplot of the first two principal components (PCs) of the genotypic data, (C) population density, and (D) the assignment of each individual to the corresponding subpopulation

Supplementary Figure S3: Linkage disequilibrium(r^2) plot in 197 wheat genotypes across(A) genome A, (B) genome B and (C) genome D

Supplemental Table S1: Summary of main MTAs identified at $p < 0.001$ for the average grain yield and drought related traits at Sidi El Aidi environment during 2015 and 2016 seasons
