Sequences with a yellow background are primer sequences designed in AMIRdesigner; sequences with a blue background are connector sequences added for cluster AMIR and GUS sequences by fusion PCR; sequences in bold and underlined encode restriction sites, as indicated below the lines.

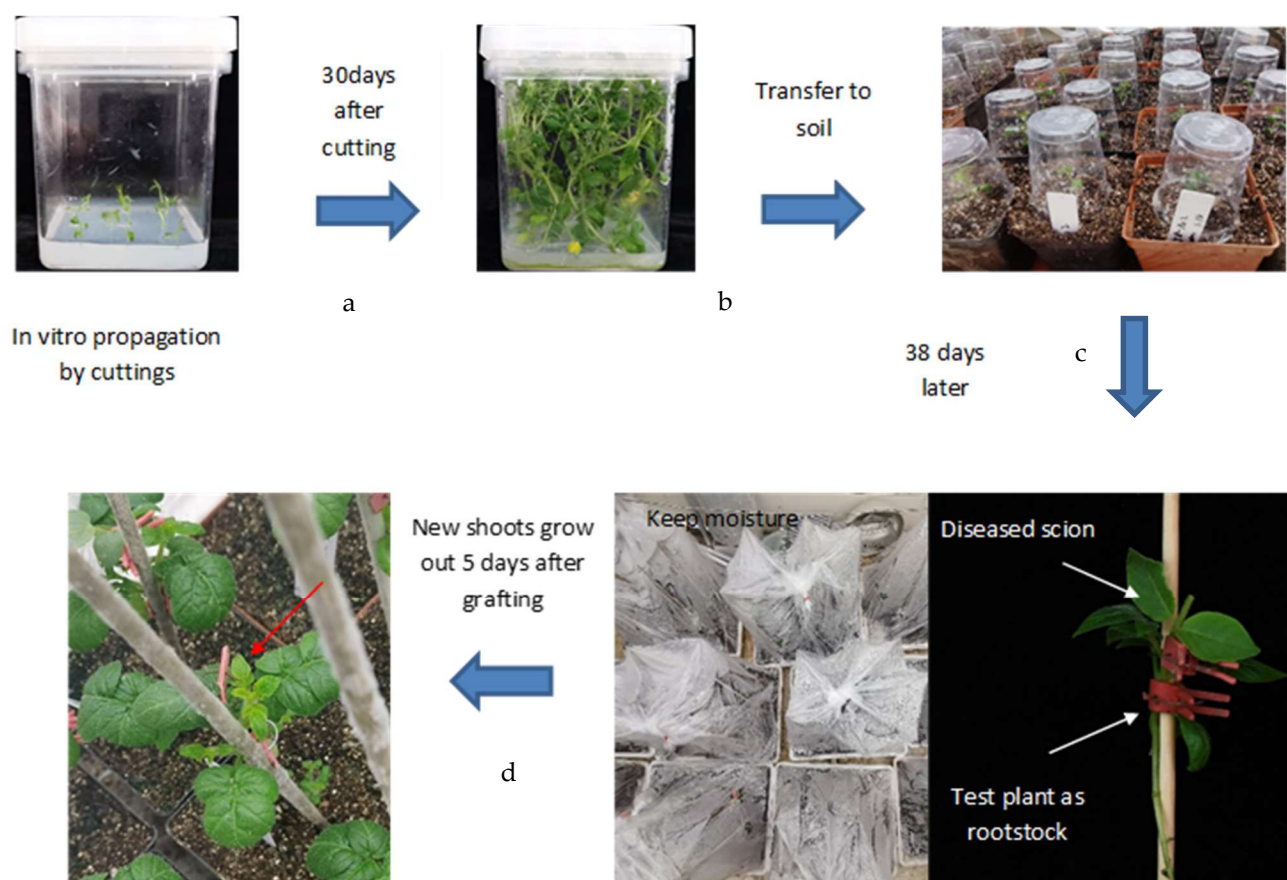

**Table S2 The primers used to construct miRNA sensor vector PMS4–amiRCP.**

Primer ID	Primer sequence (5'-3')
Anti-AMIRCP_F	<u>TCGAGTCT</u> <u>CAGACTGTCCGGCATTCAAGAT</u>
Anti-AMIRCP_R	<u>CTAGATCTTGAATGCCGGACAGTCTGAGAC</u>

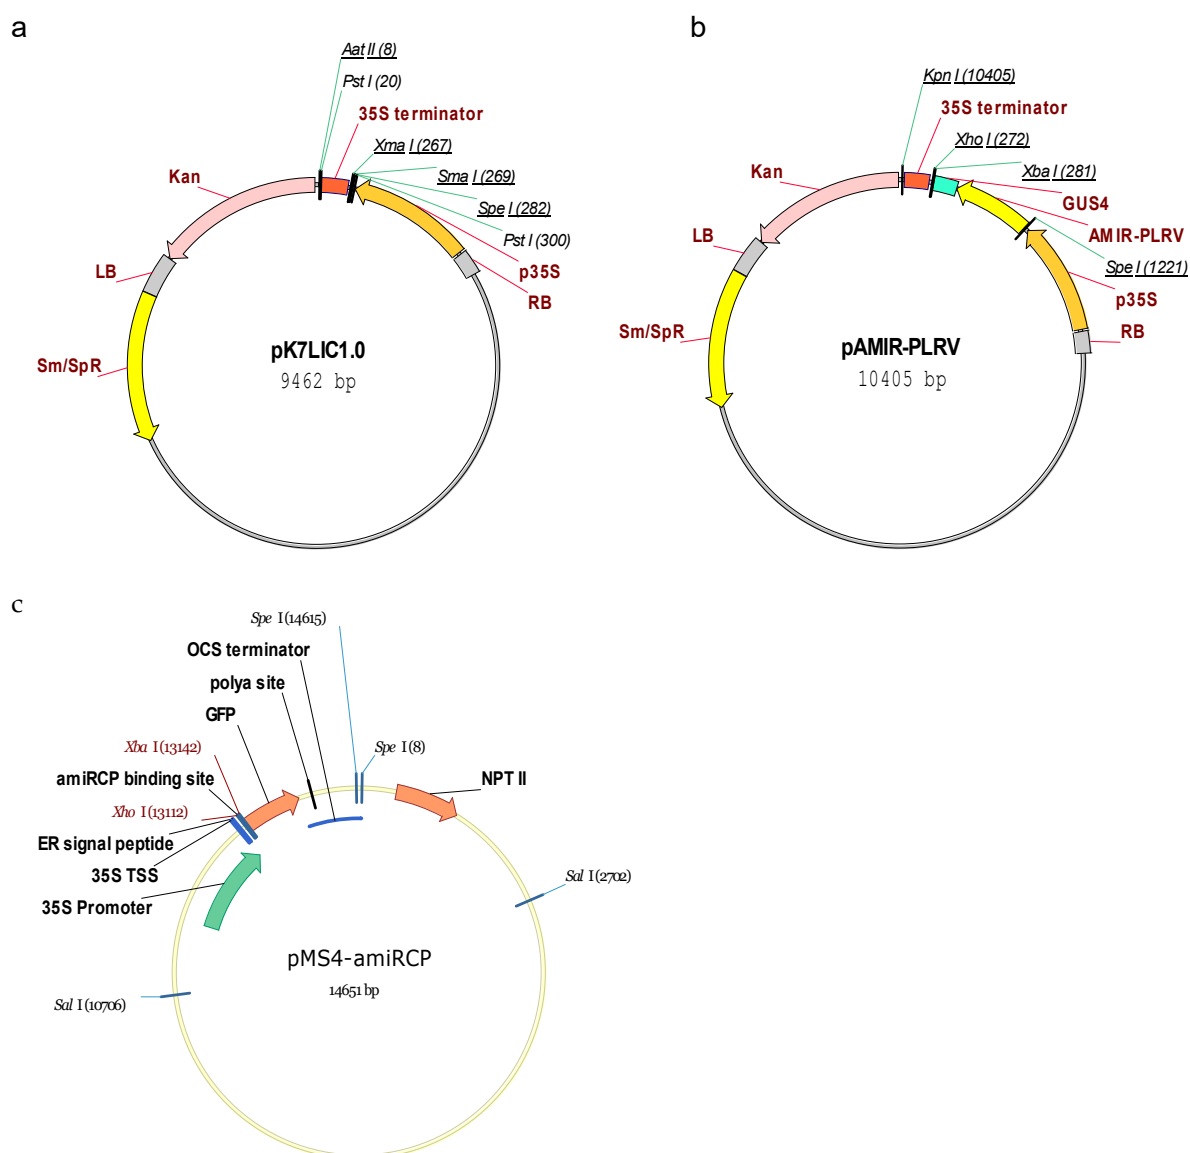

Letters in bold blue form a 5' overhang compatible with XhoI and XbaI digested vector DNA; underlined sequences are complementary in the F and R primers; letters of the F primer and R primer in red encode the amiRCP binding site and its complementary sequences, respectively.

**Figure S1 Sequence alignments of artificial miRNA precursors.** Arrows represent primers P1 to P5, with forward primers pointing to the right and reverse primers pointing to the left. Dashed lines indicate the ends of each primers.

**Figure S2. Workflow for graft inoculation on potato plants.** a) Grow potato seedlings from cutting for 30 days in tissue culture medium; b) transfer potato seedlings to soil; c) 38 days later, transfer potato seedlings to soil, graft diseased scion onto the potato seedlings and retain moisture using plastic cover; d) continue to grow grafted potato plants to allow new shoots to grow.

**Figure S3. Restriction maps of vectors used in this study.** a) Vector pK7LIC1.0 was derived from gateway vector pK7WGF2 (VIB—UGent Center for Plant Systems Biology), replacing its LR recombination unit and eGFP with ligation-independent cloning (LIC) sequences. The LIC sequences are split by a SmaI site. SpeI and PstI sites are placed next to the LIC sequences. b) pAMIR-PLRV. The AMIR-PLRV cluster and GUS spacer sequences are shown as yellow arrows and a blue square between the 35S terminator (red square) and 35S promoter (dark yellow arrow). c) pMS4-amiRCP. The amiRCP binding site is flanked by XhoI and XbaI restriction sites.
