**Figure S1.** 16S Phylogenetic Tree of Culturable Seed-borne Cannabis Seedling Endophytes Across Hemp X59 Generations.

Strains of *Bacillus megaterium* and *Paenibacillus mobilis* were cultured from two successive generations of Hemp X59 grown to seed. Generation-1 was grown outdoors in soil in Vegreville, AB, Generation-2 was grown indoors in Sunshine Mix in Kelowna, BC. *P. mobilis* isolates are outlined in teal. *B. megaterium* isolates are outlined in orange. Amplicons were aligned using MUSCLE algorithm prior to nearest-neighbor phylogenetic tree was construction using Tamura-Nei model on MEGA software (Version 11.0.11).

**Figure S2.** Altair Seed-Associated Fungi.

*Alternaria* and *Penicillium* growth on germinating Altair hemp seeds 4 days after planting on PDA.
