A

OX1 vs. WT

B

OX2 vs. WT

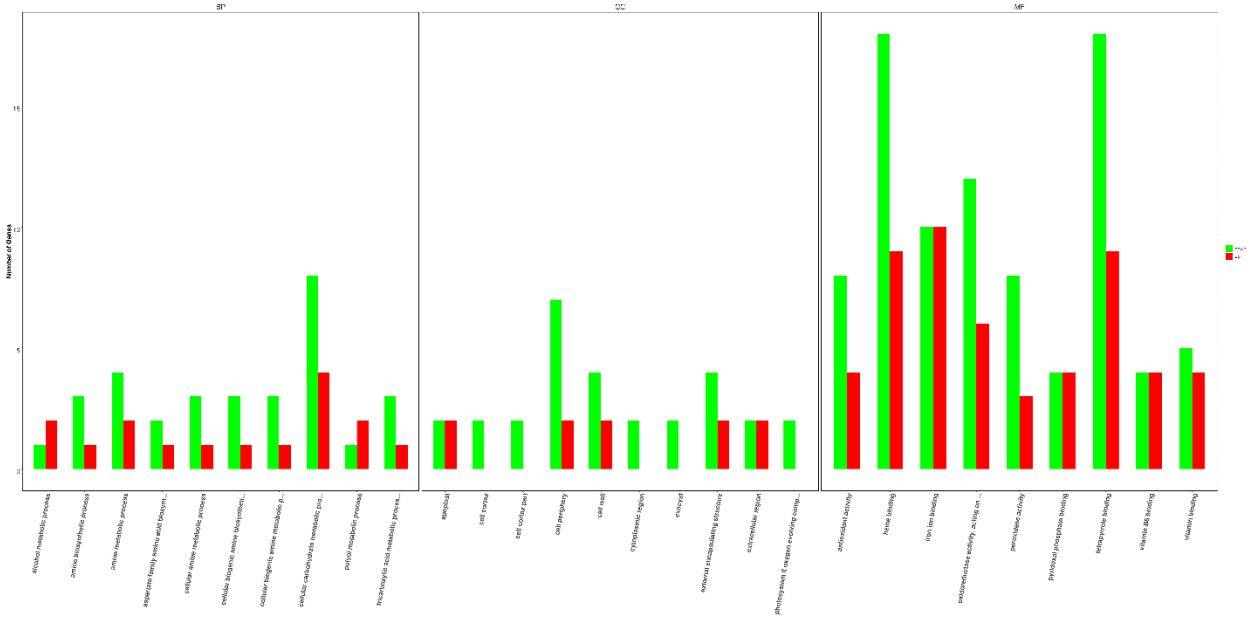

Figure S1. A) The Venn diagram comparison summarizing overlaps in differentially expressed genes among the three comparisons. B) GO assignment and comparison of all DEGs in OX1 vs. WT and OX2 vs. WT. All DEGs in OX1 vs. WT and OX2 vs. WT were annotated in three main categories: biological processes (BP), cellular components (CC) and molecular functions (MF). The left axes indicate the percentage and the number of annotated genes in each category, respectively
