

Supplementary Table S1. Principal component analysis (PCA) for 28 morpho-agronomic and physiological traits evaluated in popcorn genotypes under contrasting nitrogen (N) availability.

Principal component	Eigenvalue	Variance (%)	Cumulative variance (%)
High N			
1	14.78	52.80	52.80
2	9.04	32.30	85.10
3	4.17	14.90	100.00
Low N			
1	12.50	44.64	44.64
2	10.10	36.06	80.70
3	5.40	19.30	100.00

Supplementary Figure S1. Relative contribution of 28 morpho-agronomic and physiological traits evaluated in popcorn genotypes under contrasting nitrogen (N) availability to the first 2 Principal Components. The red line indicates the average contribution. PH – plant height (cm); SD – stem diameter (mm); LA – leaf area (cm^2); LDM – leaf dry matter (g); SDM – stem dry matter (g); STDm – shoot dry matter (g); RDM – root dry matter (g); LNC – leaf N content (mg of N kg^{-1}); SNC – stem N content (mg of N kg^{-1}); RNC – root N content (mg of N kg^{-1}); STNC – shoot N content (mg of N kg^{-1}); PNC – plant N content (mg of N kg^{-1}); (NUE – N use efficiency; NUpE_cR – N uptake efficiency with root N content; NUpE_sR – N uptake efficiency without root N content; NUtE_cR – N utilization efficiency with the content of N in the root; NUtE_sR – N utilization efficiency without the content of N in the root; NTRE – N translocation efficiency; A – net CO₂ assimilation rate; gs – stomatal conductance; Ci – intercellular concentration of CO₂; E – transpiration rate; Ci/Ca – ratio between the intercellular and external concentration of CO₂; Fv/Fm – photochemical efficiency of photosystem II; Chl – relative chlorophyll content; Flav – relative content of flavonoids; Anth – relative anthocyanin content; NBI – nitrogen balance index.

Supplementary Table S2. R² statistics to test the proportional contribution of each source of variation in 28 morpho-agronomic and physiological traits evaluated in popcorn genotypes under contrasting nitrogen (N) availability.

Trait	Sum of Squares				R ² statistics
