

Supplementary Materials

Figure S1. The soluble sugars concentrations in plum during fruit development stages. **(A)** Concentrations of TSS during plum fruit development, **(B)** Concentrations of soluble sugar during plum fruit development, **(C)** Concentrations of glucose during plum fruit development, **(D)** Concentrations of fructose during plum fruit development, and **(E)** Concentrations of sucrose during plum fruit development. All statistical differences displayed by letter were determined by ANOVA and Tukey test ($P < 0.05$).

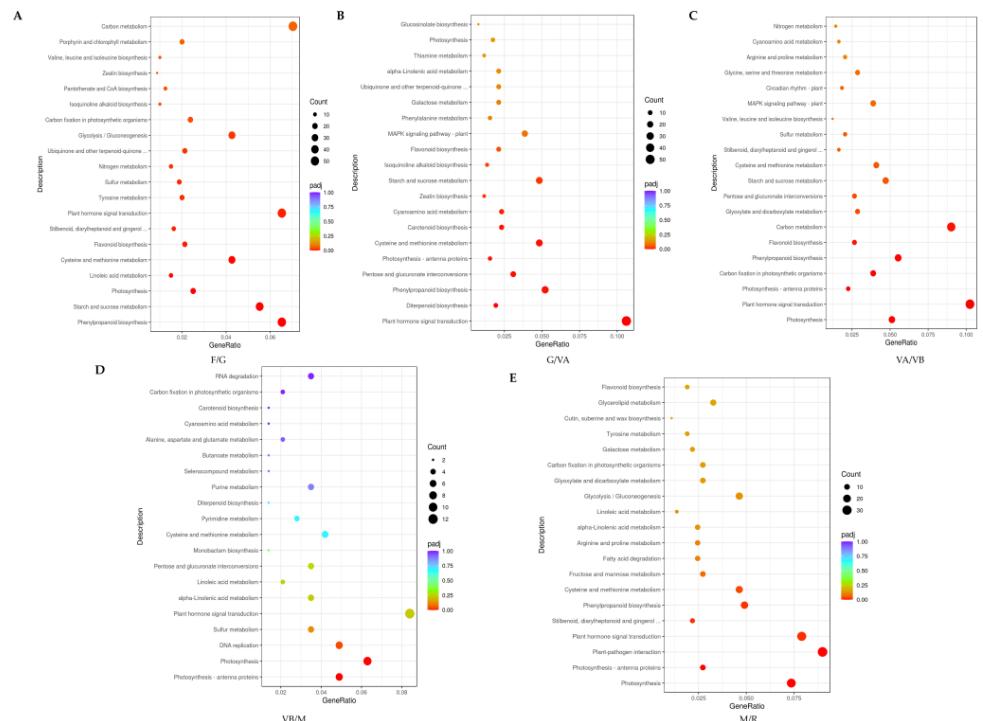

Figure S2. Top 20 enriched KEGG pathways of DEGs at different developmental stages. **(A)** Scatterplot of enriched KEGG pathway between F and G stage, **(B)** Scatterplot of enriched KEGG pathway

between G and VA stage, (C) Scatterplot of enriched KEGG pathway between VA and VB stage, (D) Scatterplot of enriched KEGG pathway between VB and M stage, (E) Scatterplot of enriched KEGG pathway between M and R stage.

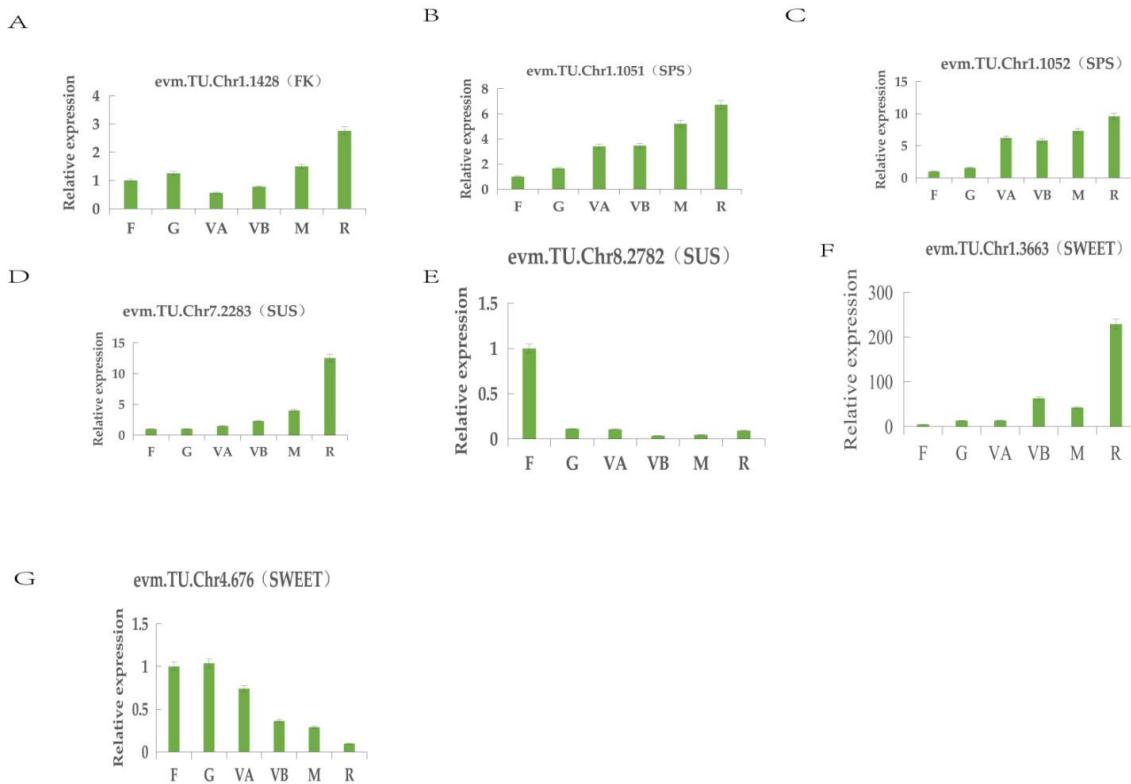

Figure S3. Quantitative validation of DEGs associated with sugar metabolism. (A) evm.TU.Chr1.1428 (FK) gene expression in different fruit development stage, (B) evm.TU.Chr1.1051 (SPS) gene expression in different fruit development stage, (C) evm.TU.Chr1.1052 (SPS) gene expression in different fruit development stage, (D) evm.TU.Chr7.2283 (SUS) gene expression in different fruit development stage, (E) evm.TU.Chr8.2782 (SUS) gene expression in different fruit development stage, (F) evm.TU.Chr4.676 (SWEET) gene expression in different fruit development stage, (G) evm.TU.Chr1.3363 (SWEET) gene expression in different fruit development stage.

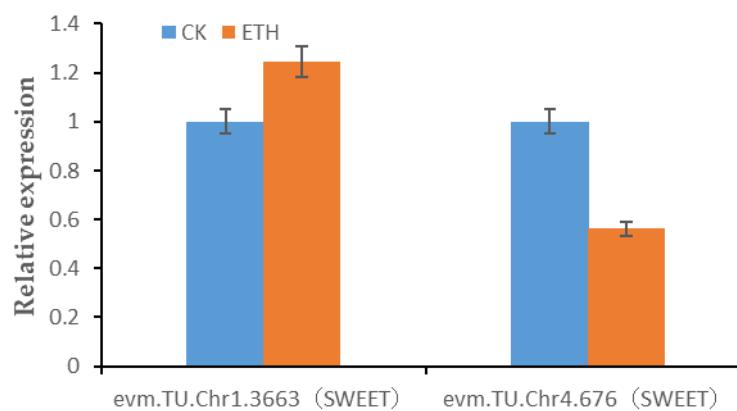

Figure S4. Expression analysis of the *SWEET* gene in ethylene-treated fruits.

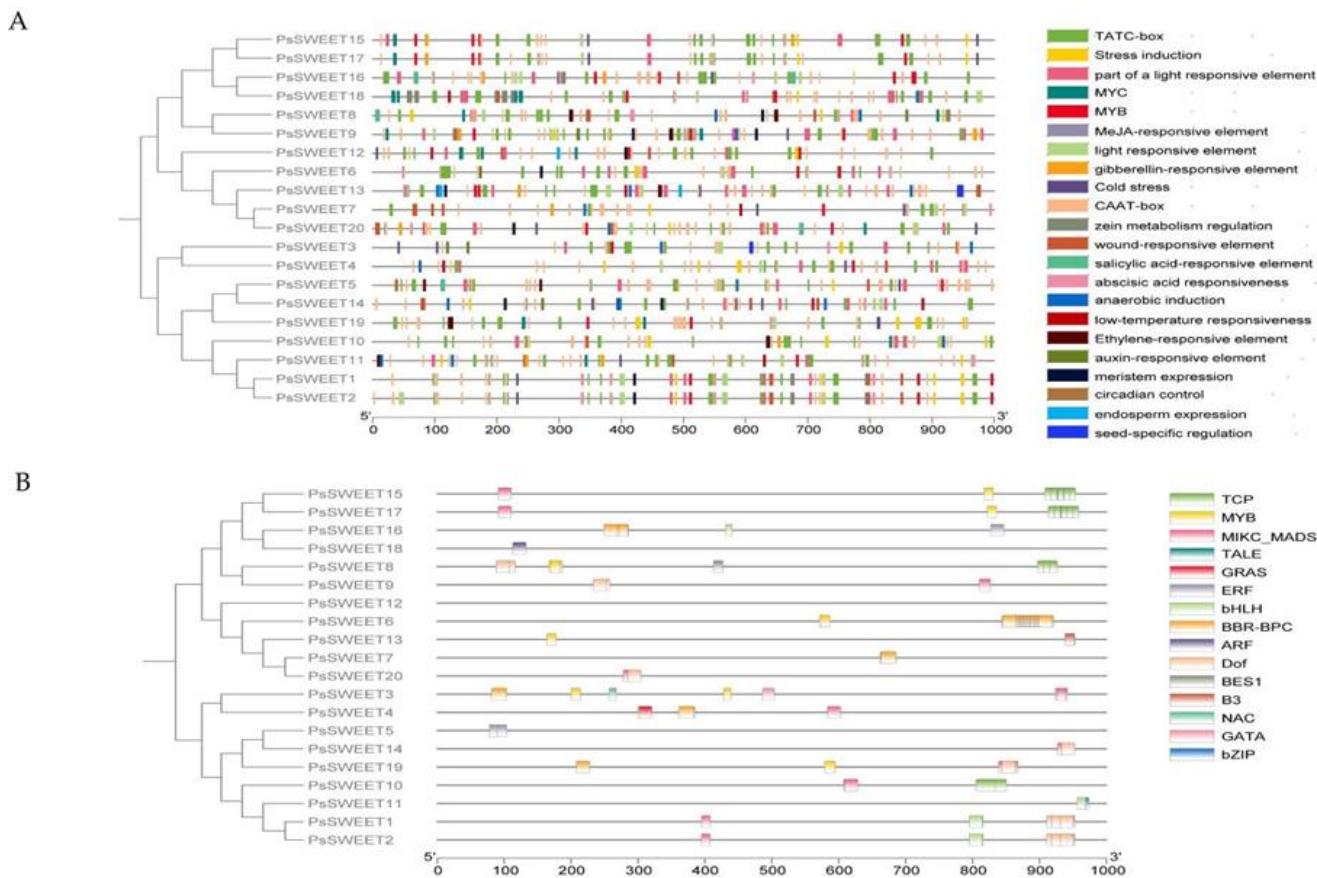

Figure S5. Analysis of promoter cis-acting elements and promoter transcription binding sites of the *PsSWEET* gene family. (A) cis-acting elements analysis of *PsSWEET* promoters, (B) promoter transcription binding sites analysis of *PsSWEET* gene family.

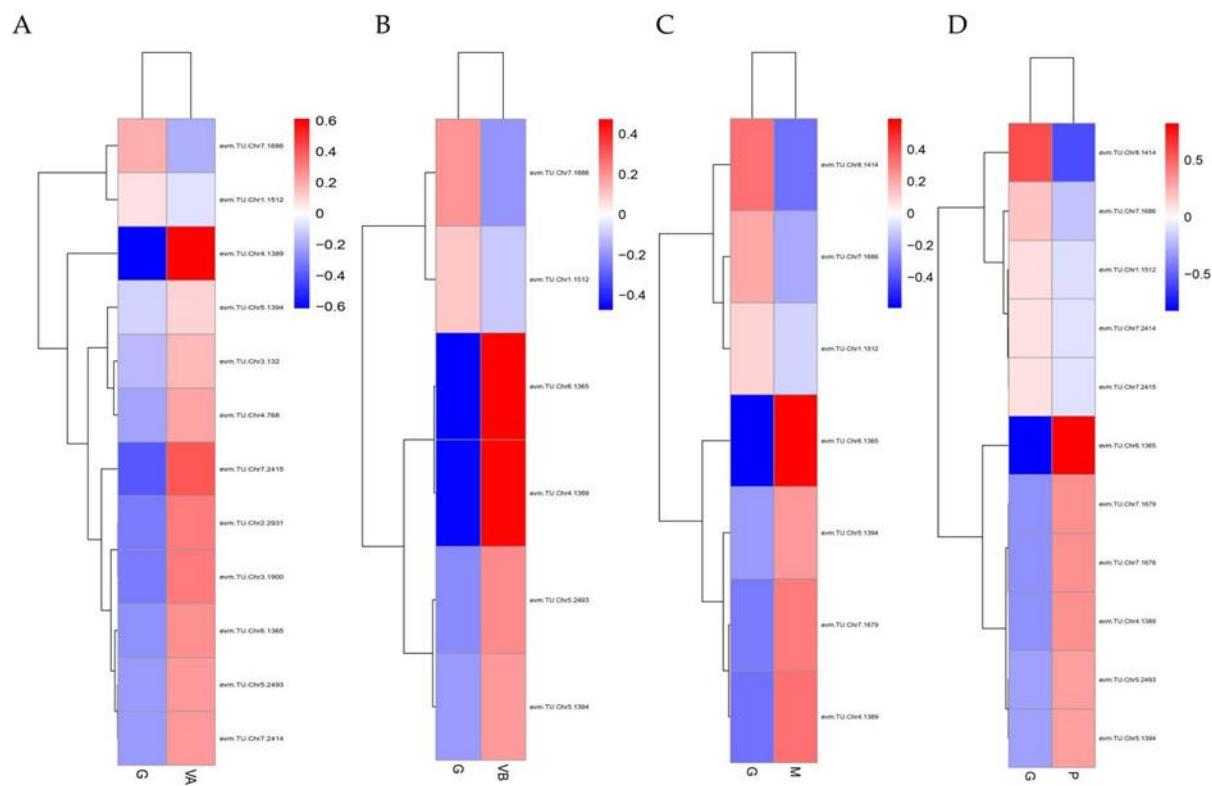

Figure S6. Hierarchical clustering of DEGs in G and VA, VB, M, P stage of plum, respectively. (A) DEGs between G and VA stage, (B) DEGs between G and VB stage, (C) DEGs between G and M stage,(D) DEGs between G and P stage. evm.TU.Chr2.2931(*bHY*), beta-carotene hydroxylase; evm.TU.Chr3.132/evm.TU.Chr3.1900 (*PSY*), phytoene synthase-like; evm.TU.Chr4.768/evm.TU.Chr4.1389 (*NCED2/NCED1*), 9-cis-epoxycarotenoid dioxygenase; evm.TU.Chr6.1365 (*CCS*), capsanthin/capsorubin synthase; evm.TU.Chr3.1900 (*PSY*),phytoene synthase; evm.TU.Chr5.2493/evm.TU.Chr7.1686/evm.TU.Chr1.1512 (*CYP707A1/CYP707A2/CYP707A1*), avium abscisic acid 8'-hydroxylase 1-like; evm.TU.Chr7.2415/evm.TU.Chr7.2414 (*LCY*), lycopene epsilon cyclase; evm.TU.Chr5.1394 (*BHYD*),beta-carotene hydroxylases.

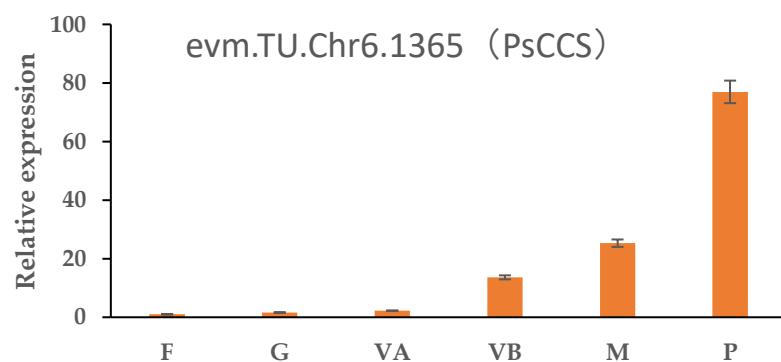

Figure S7. qRT-PCR analysis of the level of expression of capsanthin / capsorubin synthase in fruits at different stages of growth and development.

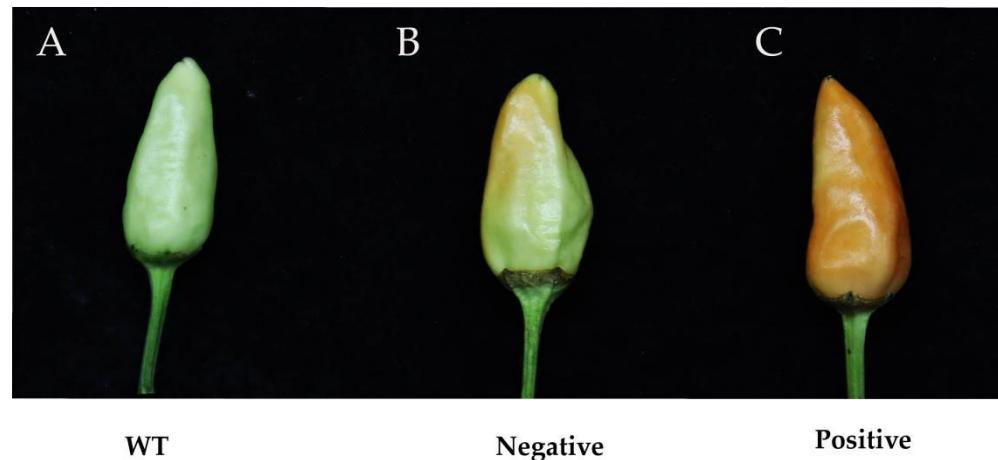

Figure S8. Phenotypic observations of transient overexpression of the *PsCCS* gene in chilli peppers. (A) Control of wild type, (B) Injection of empty plasmid strains as negative, (C) Injection of strains containing the *PsCCS* gene as positive.

Table S1. List of gene-specific primers used for real-time quantitative PCR expression analysis.

	Name	Forward primer (5' to 3')	Reverse primer (5' to 3')	Source
qRT-PCR	evm.TU.Chr1.1428 (FK)	GATTTGGTTATGTGCTC	TTTACAACTGAATAA-GCC	This study
	evm.TU.Chr1.1051 (SPS)	CCTTCAGCTCATAGTGA T	CTAGCCAATTCTCCAT C	This study
	evm.TU.Chr1.1052 (SPS)	GGTGGATTAGAT-TACCG	TCATTGAAAGAA-GCAAAC	This study
	evm.TU.Chr7.2283 (SUS)	TAAGCGTATTAA-GCAACAGG	AACACGAAGAA-TATGTG	This study
