
Supplementary Figures and Tables

Figure S1. K-means clustering analysis and SOM clustering analysis.

Table S1. Summary of circRNAs sequencing results in three rice samples.

Table S2. Top 20 most abundant circRNAs expressed in the four libraries (TPM were shown).

Table S3. List of the DE circRNA identified in IR56 rice.

Table S4. Specific information regarding predicted miRNA and circRNA binding sites

Table S5. List of the predicted targets having a putative defense modulatory role in rice.

Table S6. List of the primers used in qPCR for miRNA and target gene expression analysis.

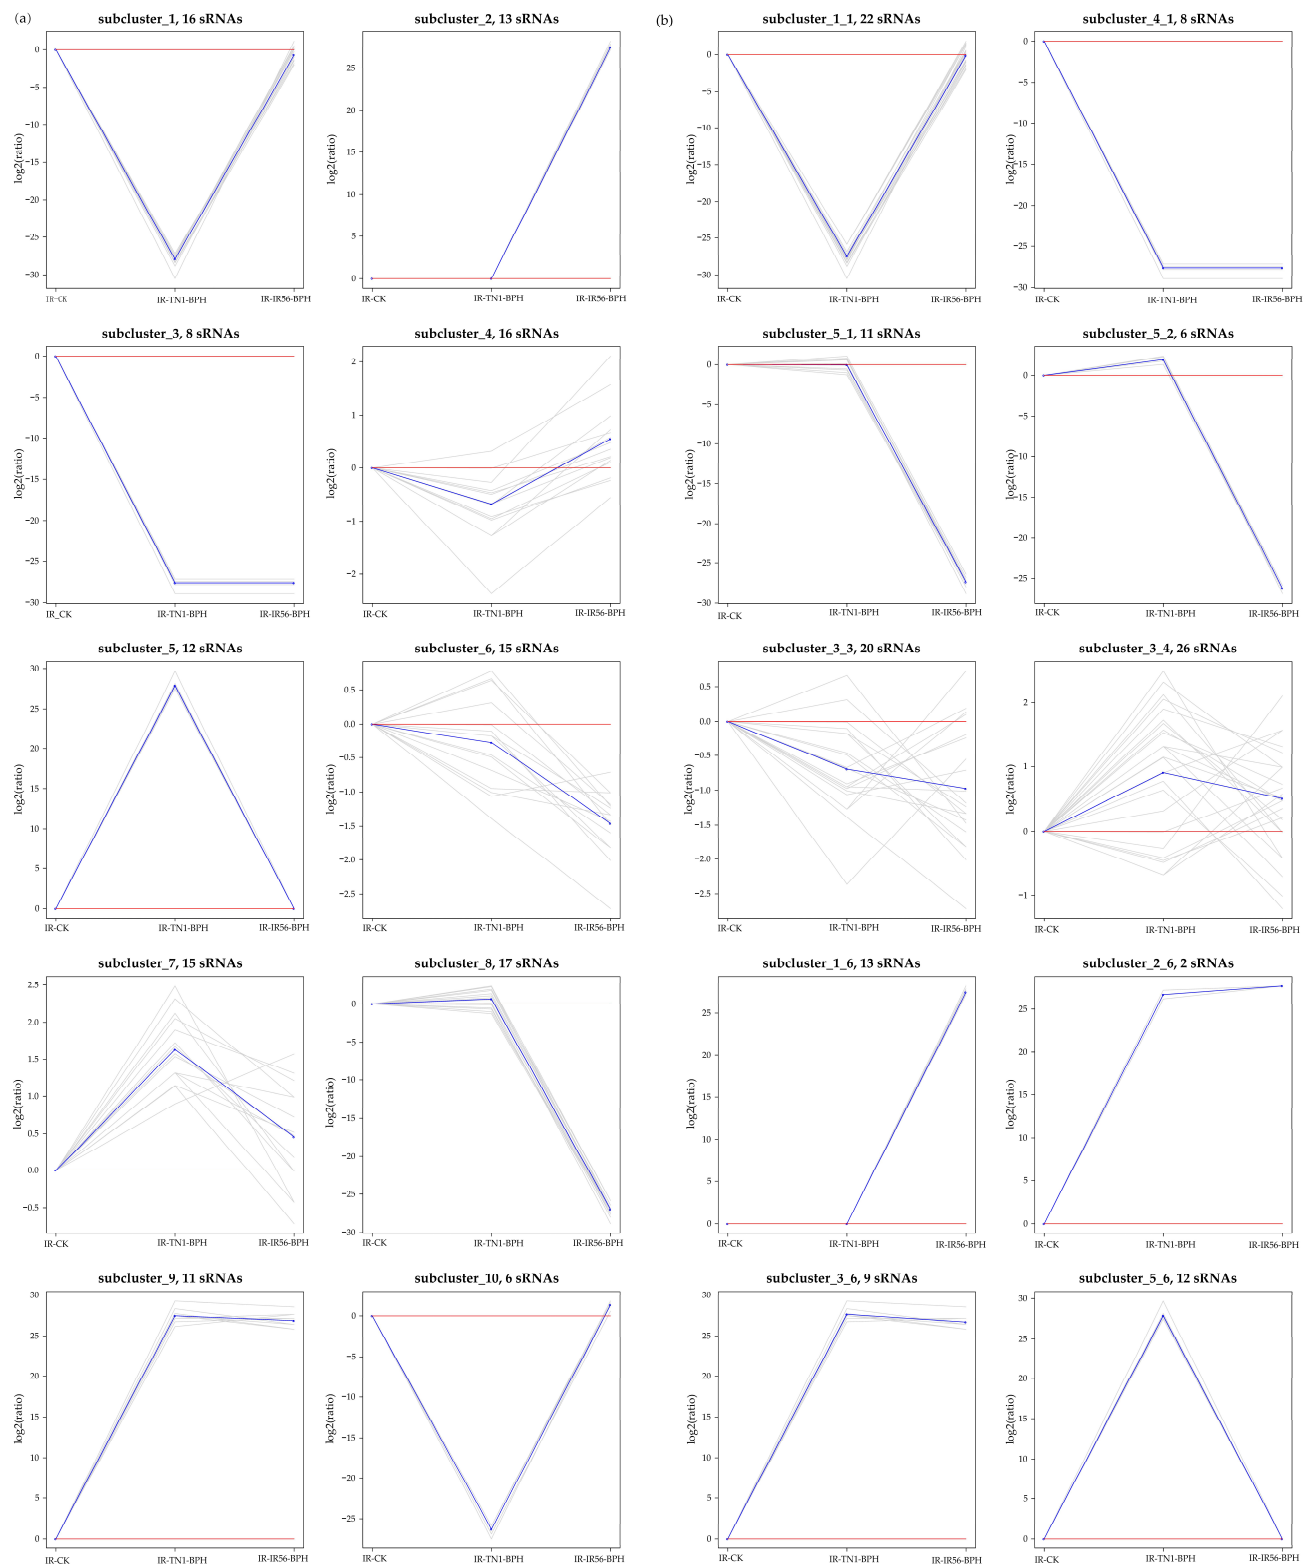

Figure S1. K-means clustering analysis and SOM clustering analysis. (a) K_means_clustering. (b) SOM clustering. Each subplot in the figure showcases a cluster of circRNA, where the grey lines represent the line graphs depicting the relative expression levels under different experimental conditions. The blue line signifies the trend within this particular

cluster. The gray lines in each subgraph represent line plots of the relative expression of circRNAs in a cluster under different experimental conditions. The blue line represents a line plot of the mean values of the relative expressions of all circRNAs in this cluster under different experimental conditions. Red line is for reference, online is up, offline is down. The X-axis represents the experimental conditions, and the Y-axis represents the relative expression.

Table S1. Summary of circRNAs sequencing results in three rice samples.

Sample	Raw counts	Clean Reads	Mapped reads(100%)	Uniquely mapped	Multiple mapped	Clean bases	Error_rate(%)	Q20(%)	Q30(%)	GC_content(%)
