Alkaloids from *In Vitro* Cultured *Rhodophiala pratensis* Display Neuroprotective Effects in Murine Microglial Cell Models of Inflammation

Diana Correa-Otero [1,2], Nandis Fiallos [2], Ángela Gómez-Mediavilla [3], Manuela G. López [3], Carlota Siguero-Gómez [3], Luis Bustamante [4], Julio Alarcón-Enos [2] and Edgar Pastene-Navarrete [2,*]

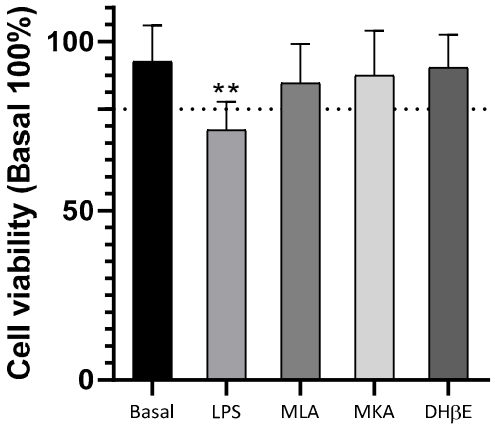

Figure S1. Nicotinic receptor antagonists do not affect the cell viability of microglia exposed to LPS. Basal corresponds to cells treated with 0.4% dimethyl sulfoxide (DMSO) as vehicle. methyllycaconitine (MLA 0.1 μM), dihydro-β-erythroid (DHβE 1 μM) mekamilamine (MKA 10 μM). LPS 10 ng/mL. ** p>0,001
