**Figure S1.** Dynamic surface tension ( $\gamma$ ) of PANa, PSSNa and PDADMAC solutions at different concentrations (in repetitive units) determined by pendant-drop measurements

**Figure S2.** Dynamic surface tension ( $\gamma$ ) of PDADMAC/PANa complexes prepared *off* the stoichiometry at  $Z=0.4, 0.7, 1.0$  and  $1.5$  from 1 mM PE stock solutions.
