

Supplementary information

S1: Creep and recovery curves obtained at different stresses

(a)

(b)

(c)

(d)

Figure S1. Compliance in loading (left side, $t = 0-15$ min) and recovery (right side, $t = 15-30$ min) with time at $T = 6$ °C and different stresses (σ , Pa), where: a—G1; b—G2; c—G3; d—G 7041. Gelatin concentration was 10 wt.%.
