Table S2 - Performance evaluation scores from the preliminary analysis.

Performance statistic	Value	Cutoff	Sensitivity	Specificity
KAPPA	0.925	721	93.981	98.2
TSS	0.938	615	97.377	96.399
ROC	0.995	636.5	96.914	96.914

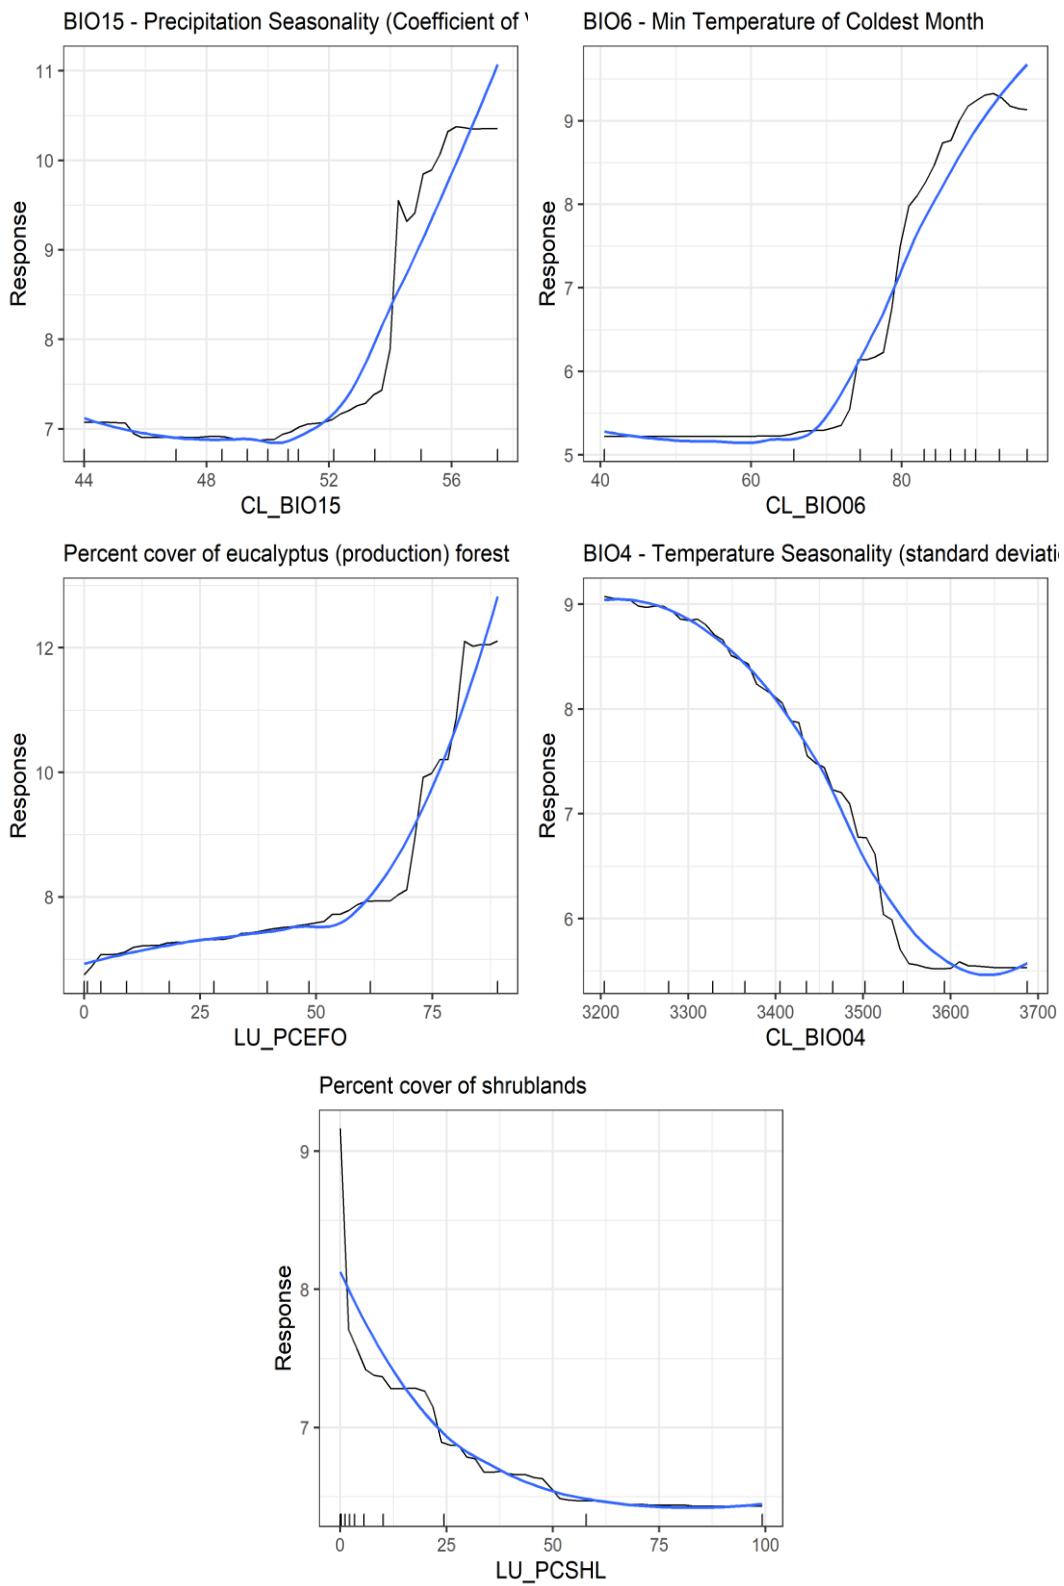

Table S3 – Average driver importance ranking for all variables tested (ordered in descendent fashion).

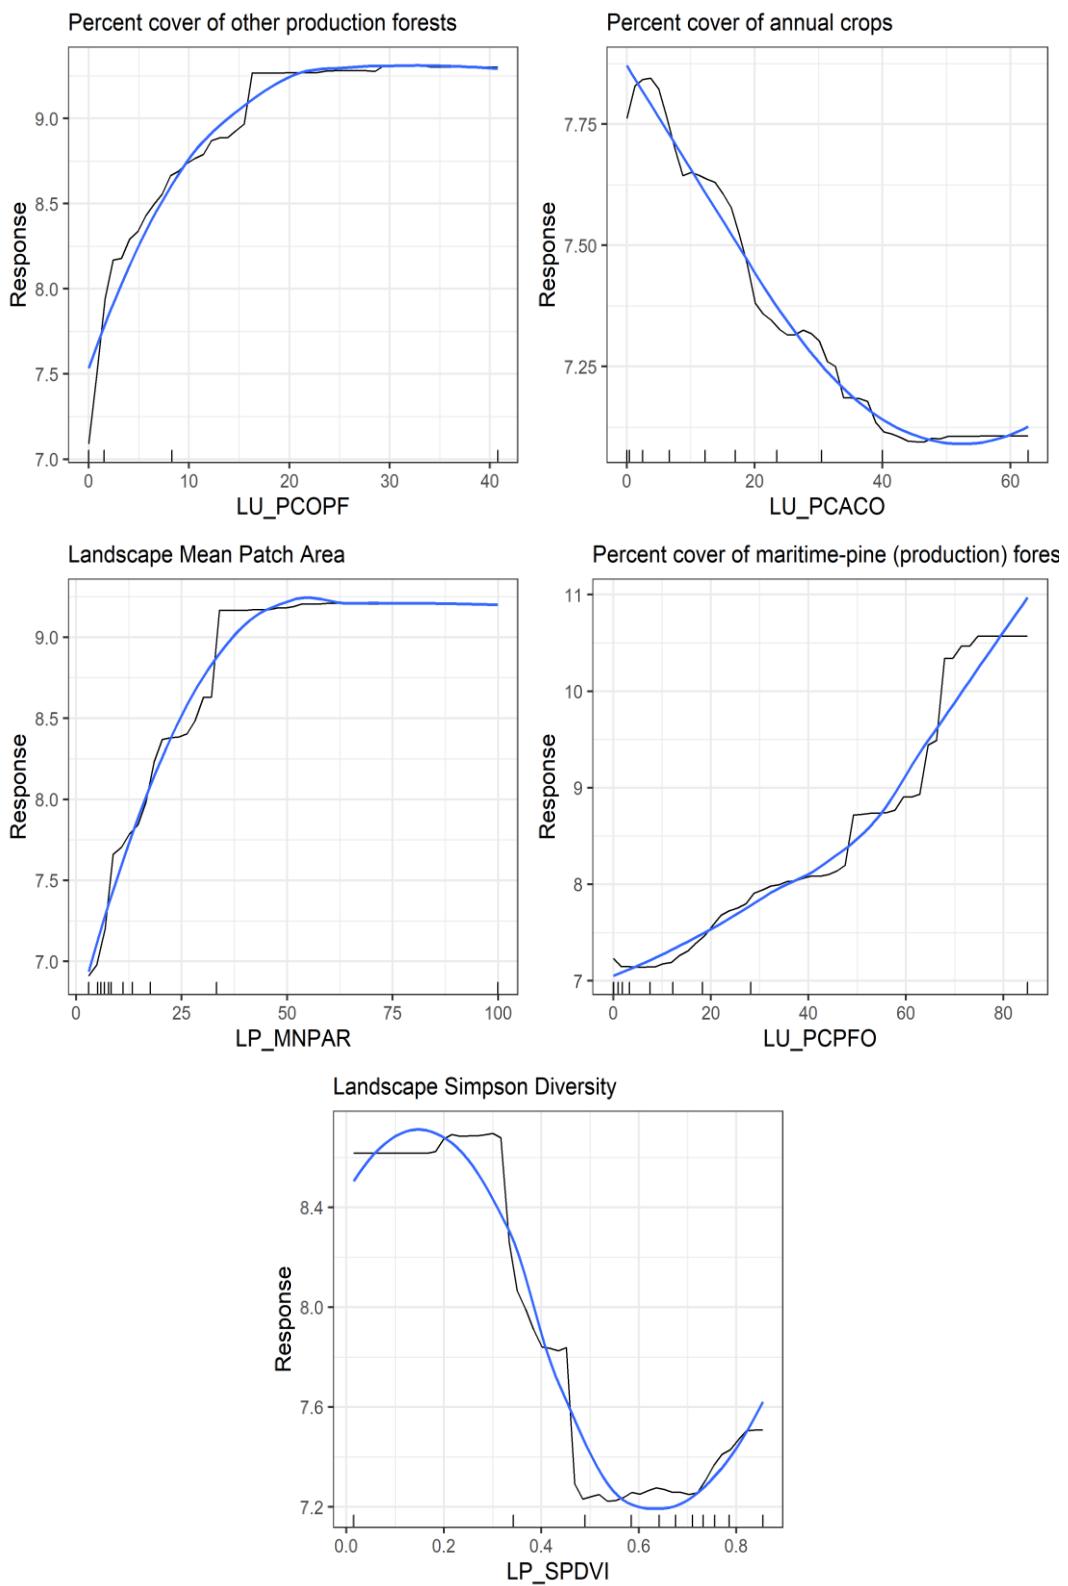

Variable type	Variable acronym	Description	Average Importance
Climate	CL_BIO06	BIO6 - Min Temperature of Coldest Month	854.3
Land use	LU_PCEFO	Percent cover of eucalyptus (production) forest	853.5
Climate	CL_BIO08	BIO8 - Mean Temperature of Wettest Quarter	831.5
Climate	CL_BIO04	BIO4 - Temperature Seasonality (standard deviation ×100)	734.1
Climate	CL_BIO15	BIO15 - Precipitation Seasonality (Coefficient of Variation)	575.7
Land use	LU_PCSHL	Percent cover of shrublands	519.9
Land use	LU_PCOPF	Percent cover of other production forests	463.3
Landscape pattern / heterogeneity	LP_MNPAR	Landscape Mean Patch Area	370.0
Landscape pattern / heterogeneity	LP_SPDVI	Landscape Simpson Diversity	360.2
Land use	LU_PCPFO	Percent cover of maritime-pine (production) forest	338.5
Landscape pattern / heterogeneity	LP_SHDVI	Landscape Shannon Diversity	310.8
Topography / Geomorphology	TG_TOWTI	Topographic Wetness Index	294.6
Landscape pattern / heterogeneity	LP_PASTD	Landscape Patch Area Standard-deviation	271.3
Topography / Geomorphology	TG_SLOPE	Slope	258.9
Topography / Geomorphology	TG_TORGI	Topographic Rugdness Index	250.1
Land use	LU_PCACO	Percent cover of annual crops	243.2
Climate	CL_BIO18	BIO18 - Precipitation of Warmest Quarter	196.3
Climate	CL_BIO17	BIO17 - Precipitation of Driest Quarter	194.0
Disturbance	DT_BA20YR	Total Burnt Area (last 20 years)	190.3
Landscape pattern / heterogeneity	LP_LAPAI	Landscape Largest Patch Index	186.4
Disturbance	DT_BA10YR	Total Burnt Area (last 10 years)	161.8
Linear elements	LE_EDGDN	Landscape edge density	156.9
Disturbance	DT_BA5YR	Total Burnt Area (last 5 years)	151.5
Topography / Geomorphology	TG_RADAV	Average Solar Radiation	149.6
Soil properties	SO_PCLAY	Percent of clay in soils	143.8

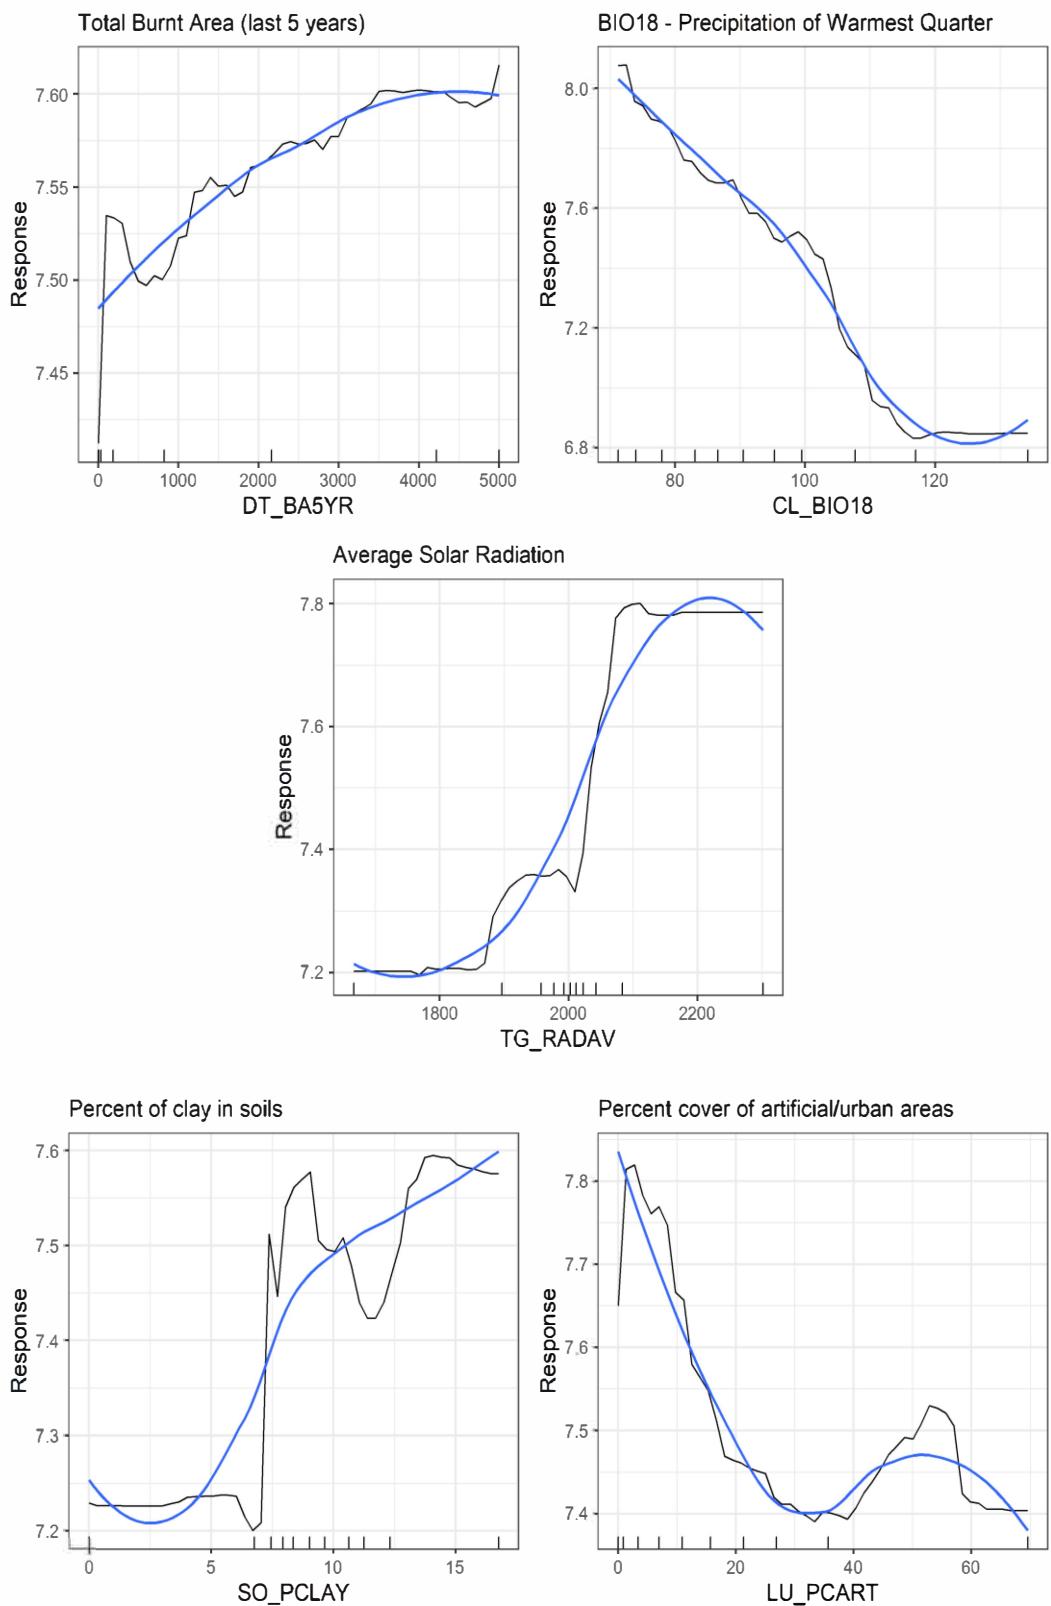

Land use	LU_PCART	Percent cover of artificial/urban areas	141.8
Soil properties	SO_BULKD	Bulk Density	139.9
Soil properties	SO_PSAND	Percent of sand in soils	131.5
Soil properties	SO_PSLT	Percent of silt in soils	130.4
Linear elements	LE_TLMTW	Total length of motorways	126.4
Landscape pattern / heterogeneity	LP_PACOV	Landscape Patch Area Coefficient of variation	123.5
Linear elements	LE_TLROD	Total length of all road types	115.5
Soil properties	SO_AVWTC	Available water content	110.3
Linear elements	LE_TLRIV	Total length of rivers	106.0
Land use	LU_PCRRL	Percent cover of roads and rails	105.4
Soil properties	SO_PCOAR	Percent of coarse elements in soils	95.3
Land use	LU_PCNFO	Percent cover of native forests	93.1
Land use	LU_PCWET	Percent cover of wetlands	84.8
Land use	LU_PCAFNM	Percent cover of complex agroforestry mosaics	73.5
Land use	LU_PCPCO	Percent cover of permanent crops	39.7
Land use	LU_PCWTS	Percent cover of water surfaces	35.5
Land use	LU_PCPAC	Percent cover of permanent and annual crops	22.0
Land use	LU_PCBSD	Percent cover of beaches and sand dunes	13.7
Land use	LU_PCSPV	Percent cover of sparsely vegetated areas	9.9
Land use	LU_PCPAS	Percent cover of pasturelands	6.6
Land use	LU_PCBRS	Percent cover of bare rock surfaces	0.8

Table S4 – Driver importance ranking for the 20-best selected variables for the final random forest model (ordered in descendent fashion).

Variable type	Variable acronym	Description	Average Importance	Std-deviation
Climate	CL_BIO06	BIO6 - Min Temperature of Coldest Month	1243.9	49.2
Land use	LU_PCEFO	Percent cover of eucalyptus (production) forest	1133.7	67.8
Climate	CL_BIO04	BIO4 - Temperature Seasonality (standard deviation ×100)	1072.3	46.0
Land use	LU_PCSHL	Percent cover of shrublands	816.8	46.4
Climate	CL_BIO15	BIO15 - Precipitation Seasonality (Coefficient of Variation)	805.7	42.3
Land use	LU_PCOPF	Percent cover of other production forests	637.0	44.8
Landscape pattern / heterogeneity	LP_MNPAR	Landscape Mean Patch Area	609.9	41.9
Landscape pattern / heterogeneity	LP_SPDVI	Landscape Simpson Diversity	583.4	42.5
Land use	LU_PCPFO	Percent cover of maritime-pine (production) forest	505.5	27.2
Climate	CL_BIO18	BIO18 - Precipitation of Warmest Quarter	435.7	25.2
Land use	LU_PCACO	Percent cover of annual crops	407.3	29.7
Soil properties	SO_PCLAY	Percent of clay in soils	400.5	30.6
Land use	LU_PCART	Percent cover of artificial/urban areas	311.9	19.5
Topography / Geomorphology	TG_RADAV	Average Solar Radiation	307.6	28.2
Disturbance	DT_BA5YR	Total Burnt Area (last 5 years)	296.3	26.1
Soil properties	SO_AVWTC	Available water content	240.3	18.2
Landscape pattern / heterogeneity	LP_PACOV	Landscape Patch Area Coefficient of variation	236.9	19.2
Soil properties	SO_PCOAR	Percent of coarse elements in soils	215.3	17.0
Linear elements	LE_TLMTW	Total length of motorways	214.3	19.0
Linear elements	LE_TLRIV	Total length of rivers	213.7	15.1

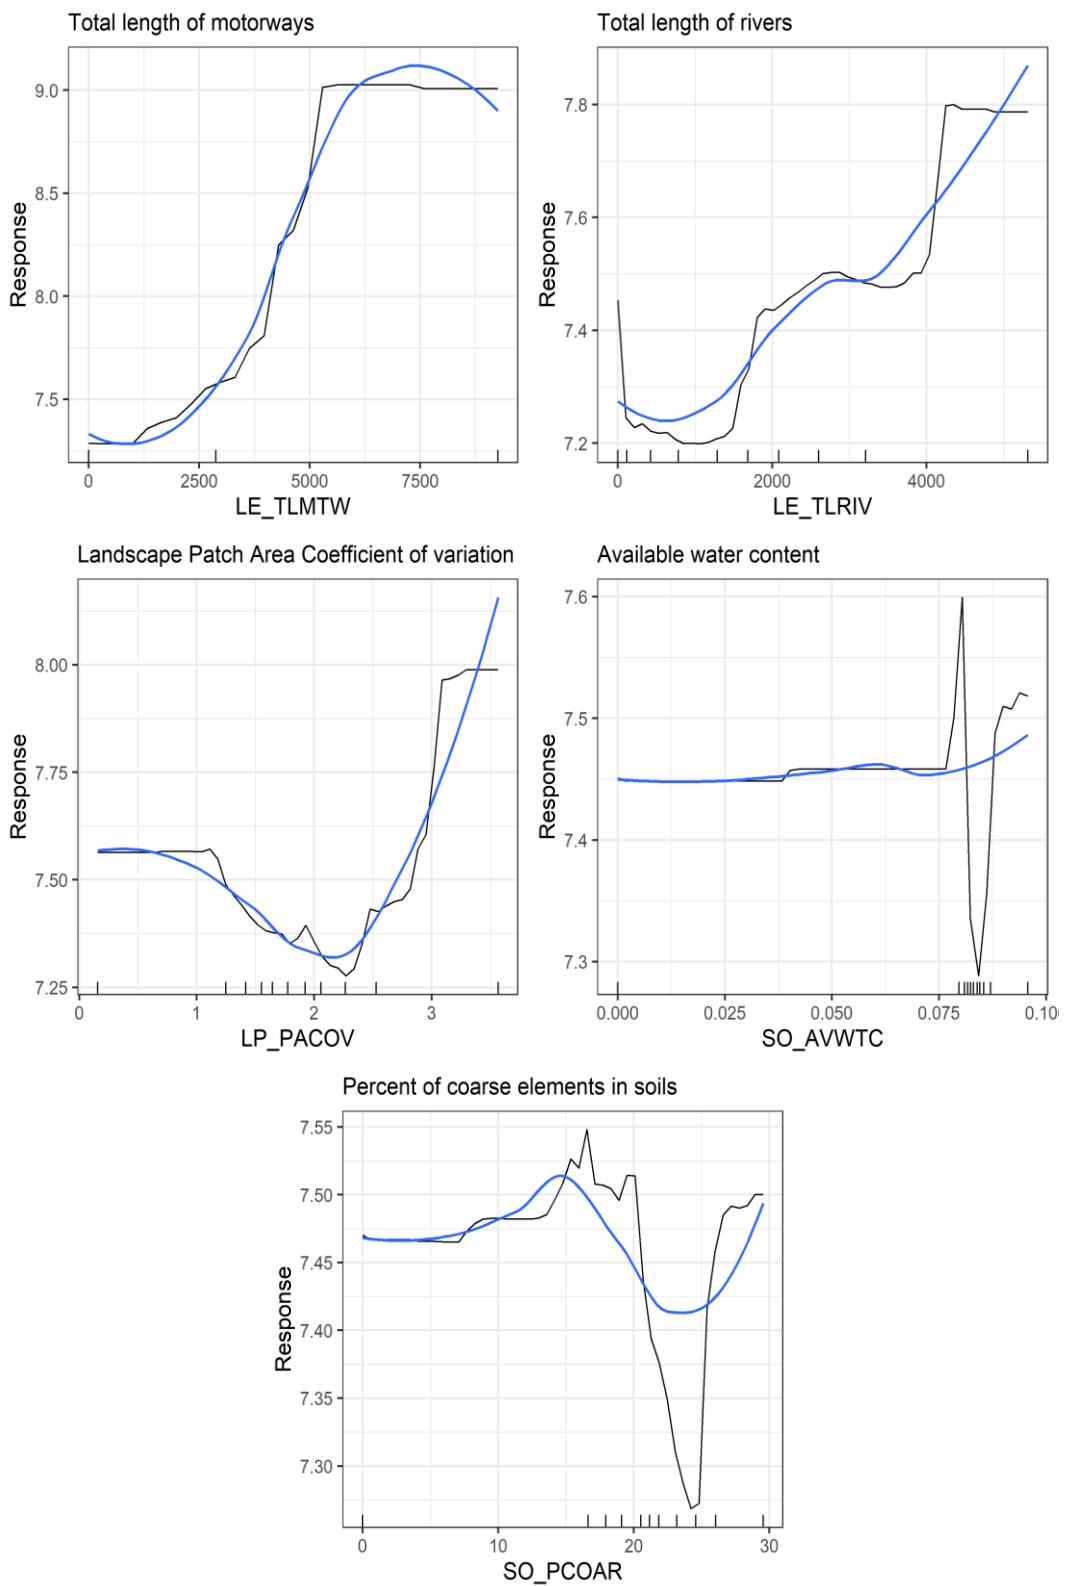

Figure S1 – Partial dependence plots for all variables used in RF models, showing the relation between the response variable (abundance given by the percentage of invaded area, in the y-axis) and the selected predictive variables of different environmental factors (x-axis). The black line indicates the “raw” response from the RF model, while the blue line applies a moving average smooth.
